General Introduction	xvi
-----------------------------	------------

Introduction to Volume One	xxix
-----------------------------------	-------------

INTRODUCTION	7
---------------------	----------

§. 1.*	What the author means by theory of science	7
§. 2.	Justification of this concept and its name	9
§. 3.	The author's theory of science is a science which has long been known and pursued under different names	12
§. 4.	Why this definition has so far not been given	17
§. 5.	What the author thinks of these reasons	19
§. 6.	The author will generally call his theory of science logic .	20
§. 7.	Examination of other definitions	20
§. 8.	Some concepts related to logic	28
§. 9.*	The uses of logic	30
§. 10.*	Time and preparation for the study of logic	36
§. 11.*	Whether logic is an art or a science	37
§. 12.	Whether logic is a purely formal science	38
§. 13.	Whether logic is an independent science	42
§. 14.	General and special logic	44
§. 15.*	General outline of this treatise	44
§. 16.	Some remarks about the plans followed in the most important modern treatises	47

BOOK ONE: THEORY OF FUNDAMENTALS	53
§. 17.* Purpose, content, and divisions of this book	53
§. 18. Refutation of some objections concerning the author's beginning that may occur to some readers	55
Part I: Of the Existence of Truths in Themselves	58
§. 19.* What the author means by a proposition in itself	58
§. 20. Justification of this concept and its designation	61
§. 21. That others have already used this concept	63
§. 22. Diverging views of the concept of a proposition	65
§. 23. Examination of several definitions of this concept	69
§. 24. Several senses of the words "true" and "truth"	81
§. 25.* What the author means by truth in itself	84
§. 26.* Distinguishing this concept from several others related to it	86
§. 27. The concept of a truth in itself has been recognised before .	87
§. 28. Probable constituents of this concept	91
§. 29. Other explanations of the concept of truth	93
§. 30.* Sense of the claim that there are truths in themselves . . .	107
§. 31.* Proof that there is at least one truth in itself	107
§. 32.* Proof that there are several, even infinitely many, truths . .	108
§. 33.* Discussion of several objections	110
Part II: Of the Recognisability of Truth	115
§. 34.* What the author means by a judgement	115
§. 35. Examination of other definitions of this concept	117
§. 36.* What the author means by a cognition	121
§. 37. Justification of this concept	122
§. 38. Other definitions of this concept	123
§. 39.* Sense of the claim that we humans can know some truths .	126
§. 40.* How it can be shown that we know at least one truth	126
§. 41.* Proof that we can know infinitely many truths	128
§. 42. Reply to several objections	129
§. 43.* One of the most reliable and useful criteria of truth	139
§. 44. Some remarks about the usual treatment of this subject . .	139
§. 45. Some remarks concerning the basic laws of thought as they are discussed in other treatises	146

BOOK TWO: THEORY OF ELEMENTS	156
§. 46.* Purpose, contents, and sections of this book	156
Part I: Of Ideas in Themselves	157
§. 47. Contents and chapters of this part	157
Chapter 1: On the Concept of an Idea in Itself	157
§. 48.* What the author means by an idea in itself, and an idea which someone has	157
§. 49.* Distinguishing the concept of an idea in itself from some others that are closely related to it	159
§. 50. Justification of this concept	161
§. 51. This concept has been used before	163
§. 52. Unsuccessful attempts at defining these concepts	166
§. 53. How these two concepts have so far been treated	170
Chapter 2: Internal Attributes of Ideas in Themselves	173
§. 54.* Ideas in themselves do not have existence	173
§. 55.* Ideas in themselves are neither true nor false	173
§. 56.* Parts and content of ideas in themselves	177
§. 57.* Of some cases in which an idea is only apparently complex	179
§. 58.* The most important kinds of complexity in ideas more carefully considered	183
§. 59.* Interpretation of some grammatical forms, especially the form "This A"	187
§. 60.* Concrete and abstract ideas	188
§. 61.* There must also be simple ideas	191
§. 62. There is no idea with greatest content	192
§. 63.* Whether the parts of an idea are the same as the ideas of the parts of its object	193
§. 64.* Whether the parts of an idea are the ideas of the attributes of the object of that idea	195
§. 65. Comparison of §§56–64 with the received theory	204
§. 66.* The concept of the extension of an idea	214
§. 67.* There are also objectless ideas	220
§. 68.* Ideas with only a finite number of objects; singular ideas .	222
§. 69.* Redundant ideas	224

Contents

§. 70.*	Real and imaginary ideas	228
§. 71.	Two consequences	235
§. 72.*	What the author means by intuitions	235
§. 73.*	Concepts and mixed ideas	238
§. 74.*	Clarification of the preceding definitions	239
§. 75.*	Some remarks concerning the different ways in which we designate intuitions and concepts	241
§. 76.	Justification of these definitions	245
§. 77.	Review of other positions	247
§. 78.	Differences between concepts with respect to content and extension	254
§. 79.	Whether the ideas of time and space are intuitions or concepts	259
§. 80.*	Ideas of properties and relations	272
§. 81.*	Ideas of matter and form	280
§. 82.	Various kinds of ideas in which the idea of a collection occurs, in particular the idea of a collection of individually listed objects	282
§. 83.	Further ideas which have the idea of a collection as a part	284
§. 84.	Concepts of multitudes [<i>Mengen</i>] and sums	286
§. 85.	The concept of a sequence	288
§. 86.*	Concepts of a unit, of a plurality, and of a totality	292
§. 87.	The concept of quantity, finite as well as infinite	293
§. 88.	Exceptive ideas	297
§. 89.*	Affirmative and negative ideas	298
§. 90.	Symbolic ideas	306

Chapter 3: Distinctions between Ideas that Stem from their Relation to each other **308**

§. 91.	No two ideas are exactly equal; similar ideas	308
§. 92.	Relations between ideas with respect to their content	311
§. 93.	Relations between ideas with respect to their width	314
§. 94.*	Relations between ideas with respect to their objects	316
§. 95.*	Special kinds of compatibility: a) Inclusion	319
§. 96.*	b) The relation of mutual inclusion or equivalence	320
§. 97.*	c) The relation of subordination	324
§. 98.*	d) The relation of overlapping or linking	327
§. 99.	Ideas of absolutely greatest and smallest width; highest and lowest ideas	330

Contents

§. 100.	Ideas that are adjacent in width or height	336
§. 101.	Whether a general concept can be found for any arbitrarily selected multitude of objects	338
§. 102.	No finite set of units suffices to measure the widths of all ideas	341
§. 103.*	Special kinds of incompatibility among ideas	343
§. 104.*	Coordinated ideas	346
§. 105.	A list of some theorems	354
§. 106.	Ideas of kinds, species, etc.	361
§. 107.	Opposing ideas	366
§. 108.*	Ways in which the relations considered in §§93 ff. could be extended to objectless ideas	371
Chapter 4: Distinctions among Ideas that Result from their Relation to other Objects		373
§. 109.	Correct and incorrect ideas of an object	373
§. 110.	Complete and incomplete ideas of an object	374
§. 111.*	Essential and inessential attribute-ideas	375
§. 112.	Common and peculiar attribute-ideas; indicators, characteristics	377
§. 113.	Original and derivative attribute-ideas	381
§. 114.	Ideas of difference	383
Appendix: Previous Treatments of the Subject Matter of this Part		387
§. 115.	Some general remarks concerning the differences between the customary presentation and my own	387
§. 116.	Some distinctions made by recent logicians	388
§. 117.	On the five so-called predicables of the Ancients	393
§. 118.	On the categories and post-predicaments of the Ancients	401
§. 119.	On the categories and concepts of reflection of the moderns	403
§. 120.	Concerning the claim that intension and extension stand in an inverse relation	409
