Contents

Introduction 1

1. The Formalism of Quantum Mechanics 5
   - *1.1. The Dirac Formulation* 6
   - *1.2. The von Neumann Formulation* 12
   - *1.3. Functions of Observables* 16
   - *1.4. The Logico-Algebraic Approach* 22
   - *1.5. Gleason's Theorem* 27
   - *1.6. The Quantum Mechanics of Many-Particle Systems* 30
   - *1.7. Angular Momentum in Quantum Mechanics* 32
   - *1.8. Angular Momentum of a Composite System* 40
   - *Notes and References* 42

2. The Interpretation of Quantum Mechanics 44
   - *2.1. View A: Hidden Variables* 45
   - *2.2. View B: Propensities and Potentialities* 48
   - *2.3. View C: Complementarity* 49
   - *2.4. Measurement and State Preparation* 51
   - *2.5. The Uncertainty Relations* 59
   - *Notes and References* 69

3. The Einstein–Podolsky–Rosen Incompleteness Argument 71
   - *Notes and References* 81

4. Nonlocality and the Bell Inequality 82
   - *4.1. The Bell Inequality* 82
   - *4.2. Counterfactuals and Indeterminism* 90
   - *4.3. Alternative Forms of the Bell Inequality* 96
   - *4.4. Stochastic Hidden-Variable Theories* 98
   - *4.5. Experimental Tests of the Bell Inequality* 107
   - *4.6. Statistical Nonlocality* 113

4.7. Summary of Conclusions 116
Notes and References 117

5. The Kochen–Specker Paradox 119
5.1. Demonstration of the Contradiction 121
5.2. The Justification of FUNC 131
Notes and References 138

6. Nonlocality and the Kochen–Specker Paradox 139
6.1. Contextuality and Nonlocality 139
6.2. The Comeasurable Value Rule 142
6.3. The Incompatibility of CVR and Locality 146
6.4. Implications 150
Notes and References 151

7. Realism and Quantum Logic 153
7.1. The Revisability of Logic 153
7.2. Classical Propositional Logic 155
7.3. The Logic of Classical Physics 157
7.4. Quantum Propositional Logic 160
7.5. Putnam States and Realism 164
Notes and References 167

8. Envoi 168
Notes and References 169

Mathematical Appendix 170
