TABLE OF CONTENTS

PREFACE xi

CHAPTER 1/PROBABILITY AND INVERSE INFERENCE

1.1. Introduction 1
1.2. Bayes' Theorem and the Laplacean Principle of Insufficient Reason 5
1.3. Inductive Relevance and Related Concepts: Likelihood, Sufficiency and Ancillarity 16
1.4. Continuity: The Cumulative Distribution Function and Density Function 21

CHAPTER 2/NEYMAN-PEARSON THEORY

2.1. Introduction to the Neyman-Pearson Theory of Hypothesis Testing and Confidence Intervals 29
2.2. Hypothesis Testing 37
2.3. Two Uses of Randomizers to Produce 'Mixed' Tests with Improved Power over 'Pure' Tests 42
2.4. Tests with Composite Alternative Hypotheses 45
2.5. Hacking's Criticism of N-P Hypothesis Testing 47
2.6. The Sampling Rule Problem: Another Consequence of the Forward Look 49
2.7. Confidence Intervals 51
2.8. Composite Confidence Intervals and Confidence Equivalence Condition 58
2.9. An Example Illustrating the Use of Randomization for Constructing Confidence Intervals 63

CHAPTER 3/FISHERIAN SIGNIFICANCE TESTING

3.1. Introduction to the Fisherian Theories of Significance Testing and Fiducial Probability 71
3.2. A Reconstruction of Fisherian Significance Tests 76

3.3. Data too Good to be True 84
3.4. Illegitimate Transformations of the Random Variable 86
3.5. Mistaken Analyses of Relevance and the r.v. 90
3.6. Composite Null Hypotheses, Ancillarity and Repeated Sampling 95

CHAPTER 4/THE FIDUCIAL ARGUMENT: ONE PARAMETER

4.1. Introduction to the Fiducial Argument 105
4.2. The Pivotal Variable and the Smooth Invertibility Condition 107
4.3. Ancillarity, Smooth Invertibility and the CC Principle 112
4.4. Case 1: The Fiducial Argument with Data of Two Kinds 116
4.5. Case 2: The Fiducial Argument with Data of One Kind and a Common Sufficient Statistic 120
4.6. Case 2: Lindley's Paradox and Canonical Pivotal Variables 124
4.7. Two Notes on the Connection Between Significance and Fiducial Probability 128
4.8. Case 3: Data of One Kind without a Common Sufficient Statistic, a Paradox and the Principle of Insufficient Reason 129

CHAPTER 5/THE FIDUCIAL ARGUMENT: SEVERAL PARAMETERS

5.1. Multivariate Fiducial Probability and the Step-by-Step Procedure 137
5.2. Multivariate Fiducial Probability and Repeated Sampling 146
5.3. Additional Factorizations and the Five Parameter Bivariate Normal 149
5.4. Review of Paradoxes: (1) Conflicts with N-P Theory 151
5.5. Review of Paradoxes: (2) Conflicts with Bayesian Theory 155

CHAPTER 6/IAN HACKING'S THEORY

6.1. Ian Hacking's Likelihood Principle of Irrelevance and the Fiducial Argument 168
6.2. Hacking's Principle of Irrelevance and Generalized Inverse Inference 178

CHAPTER 7/HENRY KYBURG'S THEORY

7.1. Henry Kyburg's 'Rationally Representative' Predicate and the Fiducial Argument 183

7.2. Kyburg's Relevance Conditions and Randomization 195

CHAPTER 8/RELEVANCE AND EXPERIMENTAL DESIGN

8.1. Fisherian Theories of Relevance and Experimental Design 202
8.2. Randomization and Relevance 214
8.3. Summary 219

APPENDICES

9.1. Pivotal Probabilities 226
9.2. The Equivalence of Fisher's and Tukey's Pivotal Conditions 227
9.3. Coherence of One Parameter Fiducial Arguments 228
9.4. Extended Coherence of Fiducial Probability 229
9.5. Hacking's Irrelevance Principle and Tukey's Smooth Invertibility Requirement 230
9.6. Hacking's Second Frequency Principle 231
9.7. Notes for the Bivariate Normal Distribution, Including a Derivation of the Master Significance Test [MST] 232
9.8. Additional Notes for Fieller's (also, the MST) Interval Estimate of the Ratio of Means in a Bivariate Normal Distribution 236

BIBLIOGRAPHY 239
