CONTENTS

Preface	<i>page xi</i>
Preface to the 1972 edition	xv
Prologue on probability	xix
1 The framework of inference	1
1.1 Introduction	1
1.2 The statistical hypothesis	3
1.3 Data	6
1.4 Summary	7
2 The concept of likelihood	8
2.1 Introduction	8
2.2 Likelihood defined	9
2.3 Sufficient statistics	13
2.4 Likelihood for a multinomial sample	18
2.5 Transformation of variables	19
2.6 Likelihood, information and entropy	22
2.7 Summary	23
3 Support	25
3.1 Introduction	25
3.2 Properties required of a measure of support	28
3.3 The Likelihood Axiom	30
3.4 Interpretation: the Method of Support	31
3.5 Prior support	35
3.6 Conditional support and sequential methods	37
3.7 Example	39
3.8 Summary	42
4 Bayes' Theorem and inverse probability	43
4.1 Introduction	43
4.2 Bayes' Theorem	44
4.3 Inverse probability	51
4.4 The Principle of Indifference	55
4.5 The representation of ignorance	57
4.6 Examples	61
4.7 Discussion	65
4.8 Summary	68

Contents

5	Maximum support:	
	The Method of Maximum Likelihood	70
	5.1 Introduction	70
	5.2 Indices for the shape of the support curve	71
	5.3 General forms for the score and information	77
	5.4 Transformation and combination of evaluates	79
	5.5 Analytic maximization:	
	The Method of Maximum Likelihood	85
	5.6 Newton–Raphson iteration	87
	5.7 General comments on iterative methods	93
	5.8 Integer solutions and solution by simulation	96
	5.9 Historical note on point estimation	97
	5.10 Summary	102
6	The Method of Support for several parameters	103
	6.1 Introduction	103
	6.2 Interpretation of evaluates	103
	6.3 Elimination of unwanted parameters	109
	6.4 General forms for the score and information	122
	6.5 Transformation and combination of evaluates	123
	6.6 Newton–Raphson iteration	128
	6.7 Special applications of the Newton–Raphson procedure	131
	6.8 Maximum likelihood with a constraint among the parameters	133
	6.9 Summary	142
7	Expected information and the distribution of evaluates	144
	7.1 Introduction	144
	7.2 Expected information	144
	7.3 The various forms of ‘information’	152
	7.4 Mean and variance of evaluators	154
	7.5 Bias	155
	7.6 Summary	160
8	Application in anomalous cases	162
	8.1 Introduction	162
	8.2 Multiple maxima	163
	8.3 Discontinuities in the support function	163
	8.4 Singularities in the support function	167
	8.5 Saddle points in the support function	169

Contents

8.6	Inadequate information in the sample	171
8.7	Discussion	172
8.8	Summary	172
9	Support tests	174
9.1	Introduction	174
9.2	Significance tests	174
9.3	Support tests based on the Normal and χ^2 distributions	180
9.4	Support tests for the 2×2 contingency table	190
9.5	Support tests based on the t and F distributions	194
9.6	Summary	197
10	Miscellaneous topics	199
10.1	Introduction	199
10.2	Simplicity	199
10.3	Surprise	202
10.4	Least squares, experimental design, and the analysis of variance	203
10.5	Fiducial probability	206
10.6	Summary	210
	Epilogue	211
Appendix 1	A problem in the doctrine of chances	213
Appendix 2	The history of likelihood	221
Appendix 3	Fiducial distributions	231
Appendix 4	The likelihood treatment of linear regression	239
Appendix 5	R. A. Fisher's work on statistical inference	245
	Notes	253
	References	259
	Tables of support limits for t and χ^2	265
	Index	269
