Introduction: what is the philosophy of biology?	1
Philosophy asks two kinds of questions	1
Philosophy and language	3
The agenda of the philosophy of biology	7
I Darwin makes a science	12
Overview	12
Teleology and theology	12
Making teleology safe for science	16
Misunderstandings about natural selection	20
Is Darwinism the only game in town?	23
Philosophical problems of Darwinism	27
Summary	30
Suggestions for further reading	30
2 Biological laws and theories	32
Overview	32
Causation, laws, and biological generalizations	33
Could there be laws about species?	37
Models in biology: Mendel's laws, Fisher's sex ratios, the Hardy–Weinberg equilibrium	46
Fitness and the principle of natural selection	51
Darwinism as a historical research program	58
Summary	62
Suggestions for further reading	63
3 Further problems of Darwinism: constraint, drift, function	65
Overview	65
Adaptationism—for and against	66
Constraint and adaptation	70

	What is genetic drift?	76
	Central tendencies, subjective probabilities, and theism	82
	Function, homology, and homoplasy	87
	Summary	94
	Suggestions for further reading	94
4	Reductionism about biology	96
	Overview	96
	Reduction, eliminativism, and physicalism	97
	Arguments for reductionism	100
	Antireductionist arguments from molecular biology	105
	Reductionist rejoinders	111
	Multiple realizability, supervenience, and antireductionism	114
	Self-organization and reductionism	119
	Natural selection and reduction	124
	Summary	125
	Suggestions for further reading	126
5	Complexity, directionality, and progress in evolution	127
	Overview	127
	What is progress, and is it (or could it be) a scientific concept?	128
	What does theory predict?	132
	Some more specific proposals and their problems	138
	Trends versus tendencies	147
	Complexity and intelligent design	152
	Summary	154
	Suggestions for further reading	155
6	Genes, groups, teleosemantics, and the major transitions	157
	Overview	157
	Levels and units of selection	158
	Kin selection and selection within and between groups	164
	Macroevolution and the major trends: is group selection rare or frequent?	169
	Genocentrism and genetic information	173
	Teleosemantics: philosophy of biology meets the philosophy of psychology	179
	Summary	184
	Suggestions for further reading	185

7	Biology, human behavior, social science, and moral philosophy	187
	Overview	187
	Functionalism in social science	188
	Evolutionary game theory and Darwinian dynamics	191
	Evolutionary psychology and the argument for innateness	198
	What is wrong with genetic determinism?	207
	Darwinism without genes	212
	Darwinism and ethics	218
	Summary	224
	Suggestions for further reading	224
	<i>Bibliography</i>	226
	<i>Index</i>	232
