1	Introduction	1
1.1	Objective Bayesianism outlined	1
1.2	Objective Bayesian theory	2
1.3	Criticisms of objective Bayesianism	3
1.4	Evidence, language, and rationality	4
2	Objective Bayesianism	10
2.1	Desiderata for a theory of probability	10
2.2	From Jakob Bernoulli to Edwin Jaynes	12
2.3	A characterization of objective Bayesianism	26
3	Motivation	31
3.1	Beliefs and bets	31
3.2	Probability	33
3.3	Calibration	39
3.4	Equivocation	49
3.5	Radical subjectivism	72
4	Updating	75
4.1	Objective and subjective Bayesian updating	75
4.2	Four kinds of incompatibility	78
4.3	Criticisms of conditionalization	82
4.4	A Dutch book for conditionalization?	85
4.5	Conditionalization from conservativity?	88
4.6	Summary	89
5	Predicate Languages	90
5.1	The framework	90
5.2	The Probability norm	92
5.3	Properties of the closer relation	95
5.4	Closure	96
5.5	Characterizing Equivocation	98
5.6	Order invariance	101
5.7	Equidistance	103
6	Objective Bayesian Nets	108
6.1	Probabilistic networks	108
6.2	Representing objective Bayesian probability	112
6.3	Application to cancer prognosis	116
7	Probabilistic Logic	121
7.1	A formal framework for probabilistic logics	121
7.2	A range of semantics	123

7.3	Objective Bayesian semantics	129
7.4	A calculus for the objective Bayesian semantics	133
8	Judgement Aggregation	136
8.1	Aggregating judgements	136
8.2	Belief revision and merging	137
8.3	Merging evidence	139
8.4	From merged evidence to judgements	142
8.5	Discussion	144
9	Languages and Relativity	148
9.1	Richer languages	148
9.2	Language relativity	155
9.3	Objectivity	157
10	Objective Bayesianism in Perspective	163
10.1	The state of play	163
10.2	Statistics	165
10.3	Confirmation and science	169
10.4	Epistemic metaphysics	170
