

# *Table of Contents*

## I. INTRODUCTION

	PAGE
§ 1. Logic and language	1
§ 2. Language	4
§ 3. Different levels of language	9
§ 4. Instrumental usage of language	17
§ 5. Definitions	20

## II. THE CALCULUS OF PROPOSITIONS

§ 6. Propositional operations	23
§ 7. Truth tables	27
§ 8. Survey of possible operations. Tautologies	34
§ 9. Interpretation of tautological operations as connective operations	40
§ 10. Reduction of operations to other operations	43
§ 11. Derivations	47
§ 12. The rule of substitution	55
§ 13. The rule of replacement	59
§ 14. The rule of inference	64
§ 15. Secondary rules of inference	70
§ 16. Remarks on the method of derivation	76

## III. THE SIMPLE CALCULUS OF FUNCTIONS

§ 17. Propositional functions	80
§ 18. Binding of variables	87
§ 19. Negation of operators	91
§ 20. The scope of an operator and the order of operators	96
§ 21. Synthetic assertions containing free argument variables	105
§ 22. Some concepts referring to functions	112

## IV. THE SIMPLE CALCULUS OF FUNCTIONS

(Continued)

	PAGE
§ 23. Truth characters of one-place functions	125
§ 24. Definition of tautologies containing functions	129
§ 25. The use of case analysis for the construction of tautologies in propositional functions	131
§ 26. The rules of substitution and inference in the calculus of functions	137
§ 27. The rule for free variables	143
§ 28. Derivation of tautologies	144
§ 29. Secondary rules	153
§ 30. Derivations from synthetic premises	160
§ 31. The formal and the material conception of language	164
§ 32. The proof of consistency	167
§ 33. Two objections against the proof of consistency	177
§ 34. Logical evidence	182

## V. THE CALCULUS OF CLASSES

§ 35. Classes	192
§ 36. The syllogism	200
§ 37. The principle of abstraction	209
§ 38. Classes of couples, triplets, and so on	211

## VI. THE HIGHER CALCULUS OF FUNCTIONS

§ 39. Functions of higher types	214
§ 40. The antinomies and the theory of types	218
§ 41. The technique of the higher calculus	226
§ 42. The treatment of indefinite expressions	235
§ 43. The relation of identity	240
§ 44. The definition of number	247

## VII. ANALYSIS OF CONVERSATIONAL LANGUAGE

§ 45. The deficiencies of traditional grammar	251
---	-----

## Table of Contents

xiii

	PAGE
§ 46. Proper names	255
§ 47. Descriptions	256
§ 48. The problem of individuals	266
§ 49. Fictitious existence	274
§ 50. Token-reflexive words	284
§ 51. The tenses of verbs	287
§ 52. Classification of functions	299
§ 53. Functions of higher types	301
§ 54. Descriptive functions	311
§ 55. Logical terms in a syntactical capacity	318
§ 56. Logical terms in a semantical capacity	327
§ 57. Logical terms in a pragmatic capacity	336
§ 58. Extraneous terms	344
§ 59. Classification of the parts of speech	349

### VIII. CONNECTIVE OPERATIONS AND MODALITIES

§ 60. Practical reasons for the introduction of connective operations	355
§ 61. Formal characterization of connective operations	360
§ 62. The logical nature of connective operations	377
§ 63. Relative nomological statements	384
§ 64. The semi-adjunctive implication	388
§ 65. Modalities	391
§ 66. Modal interpretation of connective operations	400
Exercises	405
Solutions	417
Index	439

The sign '[Ex.]' at the end of a section indicates that there are exercises for this section in the appendix.
