Preface ix

1 Classical Propositional Logic 1
1.1 Introductory Remarks 1
1.1.1 Some Basic Concepts 1
1.1.2 Formal Logics 4
1.2 Propositional Logic 5
1.2.1 Preliminaries 5
1.2.2 Truth Values, Valuations, and Validity 9
1.2.3 Implication, Tautology, and Other Important Concepts . 13
1.2.4 Equivalence and Expressive Completeness 15
1.2.5 Arithmetical Representation of Statements and Logical Operations 20
1.3 Trees for Classical Propositional Logic 21
1.3.1 Tree Rules for Classical Propositional Logic 23
1.3.2 Trees as a Test for Validity 26
1.3.3 Further Applications of the Tree Method. 28
1.4 Metatheorems 32
1.5 Other Proof Methods 34
1.5.1 Classical Propositional Calculus 35
1.5.2 Natural Deduction 41
1.5.3 Sequent Calculus 47

2 Classical Predicate Logic 54
2.1 Introductory Remarks 54
2.2 Tree Rules for Classical Predicate Logic 55
2.2.1 Rules for Quantifiers 55
2.2.2 Identity 61
2.2.3 Functions 63
2.3 Predicate Languages and Their Interpretations 65
2.3.1 The Languages 66
2.3.2 Interpretations: Preliminary Remarks 71
2.4 Set Theory 72
2.4.1 Sets 72

2.4.2 Relations 76
2.4.3 Equivalence Relations 78
2.4.4 Orderings 79
2.4.5 Functions 80
2.5 Interpretations of Languages for Predicate Logic 82
2.6 Validity, Satisfiability, and Models 87
2.7 Correctness and Adequacy 88
2.7.1 Some Difficulties 89
2.7.2 Dealing with the Difficulties 91
2.7.3 The Proofs 97

3 Using and Extending Predicate Logic: Postulates, Sorts and Second-Order Logic **102**
3.1 Postulate Systems 103
3.1.1 Postulate Systems for Arithmetic 108
3.1.2 Noncategoricity of First-Order Peano Arithmetic 113
3.2 Many Sorted Logic. 115
3.2.1 Introductory Remarks 115
3.2.2 Many Sorted Languages and Their Interpretations 116
3.2.3 Reducing Many Sorted to Unsorted Logic 118
3.3 Second-Order Logic 122
3.3.1 Languages and Interpretations 122
3.3.2 Second-Order Trees 124
3.3.3 The Strength of Second-Order Logic 127
3.3.4 Metatheory of Second-Order Logic 130

4 Introducing Contextual Operators: Modal Logics **134**
4.1 The Propositional Modal Language and Models 136
4.1.1 The Language 136
4.1.2 Interpretations 137
4.1.3 Classes of Frames and Different Logics 140
4.2 Trees for Contextual Logics 146
4.2.1 Proving Correctness for ■ 149
4.2.2 Counterexamples 151
4.2.3 Proving Adequacy for ■ 154
4.3 Other Systems of Contextual (Modal) Logic 155
4.3.1 Correctness and Adequacy for Trees 159
4.4 Provability Logic 163
4.4.1 Arithmetic Provability and Contextual Logic 163
4.4.2 Frames for Provability Logic 166
4.4.3 Trees for Provability Logic 167
4.5 Multi-modal Logic 169
4.6 Quantificational Contextual Logic 171
4.6.1 The Languages 171
4.6.2 Introduction 172

4.6.3 Semantics for Contextual Predicate Logic 175
4.6.4 Concluding Remarks 183

5 Getting Away From Bivalence: Three-Valued and Intuitionistic Logic 184
5.1 Three-Valued Logics 186
5.1.1 Trees for Three-Valued Logic 188
5.2 Intuitionistic Logic 192
5.2.1 Introduction—Constructivism 193
5.2.2 A More General Account 196
5.2.3 Semantics and Countermodels 201
5.2.4 Metatheorems for Intuitionistic Propositional Logic . . . 204
5.2.5 Comparing Intuitionistic Logic to Other Logics 207
5.3 Intuitionistic Predicate Logic 214
5.3.1 Interpretations 214
5.3.2 Trees for Intuitionistic Predicate Logic 216
5.3.3 Intuitionistic Identity 222

6 A Sampling of Other Logics 224
6.1 Fuzzy Logic 224
6.2 Algebraic Logic 228
6.3 Term Forming Operators and Free Logics 237
6.3.1 Term Forming Operators 238
6.3.2 Free Logics 248

7 Solutions to $*$-ed exercises 261
7.1 Solutions for Chapter 1 261
7.2 Solutions for Chapter 2 266
7.3 Solutions for Chapter 3 272
7.4 Solutions for Chapter 4 276
7.5 Solutions for Chapter 5 284
7.6 Solutions for Chapter 6 289

Index 294
