Contents

Contents	vii
List of Figures	xix
List of Tables	xxi
Introduction	1
Chapter 1. Getting started	13
1.1. First-order languages and semantics	13
1.2. Concepts from universal algebra	24
1.3. Logic	38
1.4. Logic and algebra	51
1.5. Cut elimination in sequent calculi	58
1.6. Consequence relations and matrices	62
Exercises	69
Notes	72
Chapter 2. Substructural logics and residuated lattices	75
2.1. Sequent calculi and substructural logics	76
2.2. Residuated lattices and FL-algebras	91
2.3. Important subclasses of substructural logics	97
2.4. Parametrized local deduction theorem	119
2.5. Hilbert systems	124
2.6. Algebraization and deductive filters	130
Exercises	135
Notes	138
Chapter 3. Residuation and structure theory	141
3.1. Residuation theory and Galois connections	142
3.2. Residuated structures	149
3.3. Involutive residuated structures	151
3.4. Further examples of residuated structures	156
3.5. Subvariety lattices	182
3.6. Structure theory	187
Exercises	204

Notes	210
Chapter 4. Decidability	211
4.1. Syntactic proof of cut elimination	211
4.2. Decidability as a consequence of cut elimination	217
4.3. Further results	226
4.4. Undecidability	230
Exercises	240
Notes	241
Chapter 5. Logical and algebraic properties	245
5.1. Syntactic approach to logical properties	245
5.2. Maksimova's variable separation property	254
5.3. Algebraic characterizations	257
5.4. Maksimova's property and well-connected pairs	265
5.5. Deductive interpolation properties	271
5.6. Craig interpolation property	279
Exercises	287
Notes	287
Chapter 6. Completions and finite embeddability	289
6.1. Completions of posets	289
6.2. Canonical extensions of residuated groupoids	298
6.3. Nuclear completions of residuated groupoids	303
6.4. Negative results for completions	306
6.5. Finite embeddability property	310
Exercises	319
Notes	321
Chapter 7. Algebraic aspects of cut elimination	323
7.1. Gentzen matrices for the sequent calculus FL	324
7.2. Quasi-completions and cut elimination	327
7.3. Cut elimination for other systems	332
7.4. Finite model property	339
Exercises	342
Notes	342
Chapter 8. Glivenko theorems	345
8.1. Overview	345
8.2. Glivenko equivalence	348
8.3. Glivenko properties	352
8.4. More on the equational Glivenko property	360
8.5. Special cases	364
8.6. Generalized Kolmogorov translation	372
Exercises	375

Notes	375
Chapter 9. Lattices of logics and varieties	377
9.1. General facts about atoms	378
9.2. Minimal subvarieties of RL	380
9.3. Minimal subvarieties of FL	391
9.4. Almost minimal subvarieties of \mathbf{FL}_{ew}	401
9.5. Almost minimal varieties of BL-algebras	415
9.6. Translations of subvariety lattices	417
9.7. Axiomatizations for joins of varieties and meets of logics	422
9.8. The subvariety lattices of LG and \mathbf{LG}^-	431
Exercises	436
Notes	437
Chapter 10. Splittings	439
10.1. Splittings in general	439
10.2. Splittings in varieties of algebras	440
10.3. Algebras describing themselves	441
10.4. Construction that excludes splittings	446
10.5. Only one splitting	459
Exercises	459
Notes	460
Chapter 11. Semisimplicity	463
11.1. Semisimplicity, discriminator, EDPC	463
11.2. Free \mathbf{FL}_{ew} -algebras are semisimple: outline	465
11.3. A characterization of semisimple \mathbf{FL}_{ew} -algebras	465
11.4. Sequent calculi for \mathbf{FL}_{ew}	466
11.5. Semisimplicity of free \mathbf{FL}_{ew} -algebras	470
11.6. Inside \mathbf{FL}_{ew} semisimplicity implies discriminator: outline	471
11.7. A characterization of semisimple subvarieties of \mathbf{FL}_{ew}	472
11.8. Semisimplicity forces discriminator	474
Exercises	477
Notes	478
Bibliography	479
Index	497
