UNIVERSITY PRESS

# Contents

<i>Preface</i>	ix
<i>Acknowledgments</i>	xi
1. Introduction: The desire to understand	1
1.1. Scientific understanding: diversity and disagreement	3
1.2. Integrating history and philosophy of scientific understanding	6
1.3. Overview	12
2. Understanding and the aims of science	15
2.1. The neglect of understanding	16
2.2. Understanding as an epistemic skill	24
2.3. Intelligibility, values, and objectivity	36
2.4. Understanding: a means and an end	44
3. Explanatory understanding: A plurality of models	48
3.1. From covering law explanation to unificatory understanding	49
3.2. Causal conceptions of explanatory understanding	58
3.3. Are causal and unificatory understanding complementary?	71
3.4. Unifying the plurality of modes of explanation	84
4. A contextual theory of scientific understanding	87
4.1. Understanding phenomena with intelligible theories	88
4.2. Criteria for intelligibility	101
4.3. Conceptual tools for understanding	108
4.4. The context dependence of understanding	116
4.4.1. Contextuality and historical dynamics	116
4.4.2. Contextuality and the intuitions of philosophers	120
4.4.3. Contextuality and pragmatics	123

4.5.	Realism, reduction, and understanding	128
4.5.1.	Understanding and realism	129
4.5.2.	Understanding and reduction	137
4.6.	Contextualism: risky relativism?	140
5.	Intelligibility and metaphysics: Understanding gravitation	144
5.1.	The (un)intelligibility of Newton's theory of universal gravitation	146
5.2.	The seventeenth-century debate on gravitation	152
5.2.1.	Isaac Newton: reluctant revolutionary	154
5.2.2.	Christiaan Huygens: the conscience of corpuscularism	166
5.3.	<i>Actio in distans</i> and intelligibility after Newton	174
5.4.	Metaphysics as a resource for scientific understanding	181
6.	Models and mechanisms: Physical understanding in the nineteenth century	184
6.1.	Mechanical modeling in nineteenth-century physics	185
6.1.1.	William Thomson: master modeler	187
6.1.2.	James Clerk Maxwell: advocate of analogies	193
6.1.3.	Ludwig Boltzmann: promoter of pictures	200
6.2.	Molecular models for understanding gas phenomena	205
6.3.	Boltzmann's <i>Bildtheorie</i> : a pragmatic view of understanding	216
6.4.	The uses and limitations of mechanical models	223
7.	Visualizability and intelligibility: Insight into the quantum world	226
7.1.	Visualizability and intelligibility in classical physics	228
7.2.	Quantum theory and the waning of <i>Anschaulichkeit</i>	230
7.3.	The new quantum mechanics: a struggle for intelligibility	236
7.4.	Electron spin: the power of visualization	245
7.5.	Visualization in postwar quantum physics	251
7.6.	Visualization as a tool for scientific understanding	256
8.	Conclusion: The many faces of understanding	260
8.1.	Understanding across the sciences	261
8.2.	The relativity of understanding	264
8.3.	Norms for understanding	269
	<i>Bibliography</i>	273
	<i>Index</i>	291
