<i>List of figures and tables</i>	<i>page xi</i>
<i>Preface</i>	<i>xv</i>
Part I Introduction	1
1 What is to be explained? Some preliminaries	3
1.0 Introduction	3
1.1 Some history and a look ahead	4
1.2 What is to be explained? A first definition of the topic	13
1.3 Some attempts to understand conscious experience	28
1.4 Unconscious specialized processors: A gathering consensus	43
1.5 Some common themes in this book	64
1.6 Chapter summary and a look ahead	70
Part II The basic model	71
2 Model 1: Conscious representations are <i>internally consistent</i> and <i>globally distributed</i>	73
2.0 Introduction	73
2.1 Contrasting the capabilities of conscious and unconscious processes	74
2.2 The basic model: A global workspace (blackboard) in a distributed system of intelligent information processors	86
2.3 How the theoretical metaphor fits the evidence of Table 2.1	89
2.4 Input properties of the global workspace	96
2.5 Output properties of the global workspace: How global is global?	99
2.6 Further considerations	104

2.7	Testable predictions and counterarguments	108
2.8	Chapter summary	117
3	The neural basis of conscious experience	119
3.0	Introduction	119
3.1	The neurophysiological fit with Model 1	121
3.2	Extensions suggested by the neurophysiology	128
3.3	Recent refinements of the neurophysiological evidence	131
3.4	Chapter summary	134
Part III The fundamental role of context		135
4	Model 2: Unconscious contexts shape conscious experience	137
4.0	Introduction	137
4.1	Sources of evidence on contexts	139
4.2	Several kinds of contexts	151
4.3	Modeling contextual knowledge	161
4.4	Some plausible properties of contexts	166
4.5	Implications for empirical testing	173
4.6	Chapter summary	176
5	Model 3: Conscious experience is informative – it always demands some degree of adaptation	177
5.0	Introduction: Information and adaptation	177
5.1	The adaptation cycle: Any learnable task goes from <i>context-creation</i> to <i>conscious information</i> to <i>redundancy</i>	184
5.2	Human beings also <i>seek</i> information at many levels	199
5.3	Model 3: Interpreting informativeness in the theory	203
5.4	When repeated experiences do not fade: Is informativeness a necessary condition for conscious experience?	208
5.5	Implications for learning	213
5.6	Some experimental predictions	219
5.7	Other implications	220
5.8	Chapter summary	221
Part IV Goals and voluntary control		223
6	Model 4: Goal contexts, spontaneous problem solving, and the stream of consciousness	225

6.0	Introduction	225
6.1	The tip-of-the-tongue state as a <i>goal context or intention</i>	226
6.2	The conscious–unconscious–conscious (CUC) triad	233
6.3	Empirical assessment of goal contexts	239
6.4	Goal contexts and the stream of consciousness	240
6.5	Further implications	243
6.6	Chapter summary	245
7	Model 5: Volition as ideomotor control of thought and action	246
7.0	Introduction	246
7.1	Is there a problem of volition? Some contrasts between similar voluntary and involuntary actions	248
7.2	Voluntary action resembles spontaneous problem solving	257
7.3	Model 5: The ideomotor theory in modern garb	259
7.4	Evidence bearing on the ideomotor theory	267
7.5	Explaining the voluntary–involuntary contrasts	273
7.6	Wider implications	279
7.7	Absorption and hypnosis as ideomotor events	287
7.8	Conflicts between goals	292
7.9	Chapter summary	296
Part V	Attention, self, and conscious self-monitoring	299
8	Model 6: Attention as control of access to consciousness	301
8.0	Introduction: Attention versus consciousness	301
8.1	Voluntary and automatic control of access to consciousness	305
8.2	Modeling voluntary and automatic access control	307
8.3	Directing attention <i>toward</i> something	314
8.4	Directing attention <i>away from</i> something: Suppression, repression, and emotional conflict	317
8.5	Further implications	321
8.6	Chapter summary	324
9	Model 7: Self as the dominant context of experience and action	325
9.0	Introduction	325
9.1	Contrasting self and not-self experiences	331
9.2	Modeling self and self-concept	336
9.3	Further questions to explore	341
9.4	Chapter summary	344

Part VI	Consciousness is functional	345
10	The functions of consciousness	347
10.0	Introduction	347
10.1	Definitional and Context-setting Function	350
10.2	Adaptation and Learning Function	351
10.3	Editing, Flagging, and Debugging Function	351
10.4	Recruiting and Control Function	352
10.5	Prioritizing and Access-control Function	352
10.6	Decision-making or Executive Function	353
10.7	Analogy-forming Function	353
10.8	Metacognitive or Self-monitoring Function	354
10.9	Autoprogramming and Self-maintenance Function	355
10.10	Chapter summary	356
Part VII	Conclusion	357
11	A summary and some future directions	359
11.0	Introduction	359
11.1	Overall review	359
11.2	A brief review of the models	360
11.3	What are the necessary conditions for conscious experience?	362
11.4	Some practical implications of GW theory	364
11.5	Topics not covered in this volume	364
11.6	Philosophical implications: The mind-body problem revisited	365
11.7	Future directions for research and theory	365
	<i>Glossary and guide to theoretical claims</i>	367
