

BERKELEY'S
PHILOSOPHY OF
MATHEMATICS

Douglas M. Jesseph

The University of Chicago Press
Chicago and London

Contents

	Preface	ix
	Works Frequently Cited	xi
	Introduction	1
1	Abstraction and the Berkeleian Philosophy of Mathematics	9
	Aristotelian and Scholastic Background	9
	Seventeenth-Century Background	13
	Berkeley's Case against Abstract Ideas	20
	Sources of Berkeley's Antiabstractionism	38
2	Berkeley's New Foundations for Geometry	44
	The Early View	45
	Abstraction and Geometry in the <i>Principles</i>	69
	Geometry in the <i>New Theory of Vision</i>	78
	Geometry and Abstraction in the Later Works	83
3	Berkeley's New Foundations for Arithmetic	88
	Geometry versus Arithmetic	89
	Numbers as Creatures of the Mind	95
	The Nonabstract Nature of Numbers	99
	Berkeley's Arithmetical Formalism	106
	Algebra as an Extension of Arithmetic	114
	The Primacy of Practice over Theory	117
	Berkeley's Formalism Evaluated	118

4	Berkeley and the Calculus: The Background	123
	Classical Geometry and the Proof by Exhaustion	124
	Infinitesimal Mathematics	129
	The Method of Indivisibles	132
	Leibniz and the Differential Calculus	138
	The Newtonian Method of Fluxions	143
5	Berkeley and the Calculus: Writings before the <i>Analyst</i>	152
	The Calculus in the <i>Philosophical Commentaries</i>	153
	The Essay "Of Infinities"	162
	The <i>Principles</i> and Other Works	173
6	Berkeley and the Calculus: The <i>Analyst</i>	178
	The Object of the Calculus	183
	The Principles and Demonstrations of the Calculus	189
	The Compensation of Errors Thesis	199
	Ghosts of Departed Quantities and Other Vain Abstractions	215
	The <i>Analyst</i> Evaluated	226
7	The Aftermath of the <i>Analyst</i>	231
	Berkeley's Disputes with Jurin and Walton	233
	Other Responses to Berkeley	259
	The Significance of the <i>Analyst</i>	292
	Conclusions	297
	Bibliography	301
	Index	317
