
Molecular and Cellular Physiology of Neurons

GORDON L. FAIN

HARVARD UNIVERSITY PRESS

Cambridge, Massachusetts

London, England 1999

Contents

Preface	<i>ix</i>
1 Introduction	1
PART ONE Electrical Properties of Cells and Homeostasis	
2 Passive Electrical Properties of Neurons	25
3 Ion Permeability and Membrane Potentials	63
4 Ion Pumps and Homeostasis	95
PART TWO Active Propagation of Neural Signals	
5 Action Potentials: The Hodgkin-Huxley Experiments	131
6 The Structure and Function of Voltage-Gated Channels	171
7 The Diversity of Voltage-Gated Channels	208
PART THREE Synaptic Transmission and Ligand-Gated Channels	
8 Presynaptic Mechanisms of Synaptic Transmission	255
9 Excitatory Transmission	308
10 Inhibitory Transmission	357
PART FOUR Metabotropic Transmission and Neuromodulation	
11 Receptors and G Proteins	385
12 Effector Molecules	407
13 Calcium and Nitric Oxide	440
14 Long-Term Potentiation BY THOMAS O'DELL	476

PART FIVE Sensory Transduction

15	Mechanoreceptors	511
16	Photoreceptors and Olfactory Receptors	541
	Appendix: Symbols Used	581
	References	585
	Index	685
