
The Birth of Model Theory

Löwenheim's Theorem in the Frame of the
Theory of Relatives

CALIXTO BADESA

Translated by Michael Maudsley

Revised by the author

Contents

Preface	ix
Chapter 1. Algebra of Classes and Propositional Calculus	1
1.1 Boole	1
1.2 Jevons	10
1.3 Peirce	12
1.4 Schröder	17
Chapter 2. The Theory of Relatives	31
2.1 Introduction	31
2.2 Basic concepts of the theory of relatives	33
2.3 Basic postulates of the theory of relatives	40
2.4 Theory of relatives and model theory	51
2.5 First-order logic of relatives	66
Chapter 3. Changing the Order of Quantifiers	73
3.1 Schröder's proposal	73
3.2 Löwenheim's approach	81
3.3 The problem of expansions	87
3.4 Skolem functions	94
Chapter 4. The Löwenheim Normal Form	107
4.1 The Löwenheim normal form of an equation	107
4.2 Comments on Löwenheim's method	113
4.3 Conclusions	122
Chapter 5. Preliminaries to Löwenheim's Theorem	129
5.1 Indices and elements	129
5.2 Types of indices	132
5.3 Assignments	135
5.4 Types of equations	138
Chapter 6. Löwenheim's Theorem	143
6.1 The problem	143
6.2 An analysis of Löwenheim's proof	148
6.3 Reconstructing the proof	191

Appendix. First-Order Logic with Fleeing Indices	207
A.1 Introduction	207
A.2 Syntax	207
A.3 Semantics	211
A.4 The Löwenheim normal form	217
A.5 Löwenheim's theorem	220
References	227
Index	237
