Introduction xi

Chapter I. Prolegomena 1
§ 1. A threefold correspondence 1
§ 2. The acts of the mind 4
§ 3. The principle of compositionality 6
§ 4. Lingua characteristica 9

Chapter II. Truth and Knowledge 13
§ 1. The meaning of meaning 13
§ 2. A division of being 16
§ 3. Mathematical entities 18
§ 4. Judgement and assertion 22
§ 5. Reasoning and demonstration 25
§ 6. The proposition 26
§ 7. The laws of logic 36
§ 8. Variables and generality 44
§ 9. Division of definitions 49

Chapter III. The Notion of Set 53
§ 1. A history of set-like notions 53
§ 2. Set-theoretical notation 59
§ 3. Making universal concepts into objects of thought 59
§ 4. Canonical sets and elements 63
§ 5. How to define a canonical set 69
§ 6. More canonical sets 74

Chapter IV. Reference and Computation 77
§ 1. Functions, algorithms, and programs 78
§ 2. The concept of function 81
§ 3. A formalization of computation 86
§ 4. Noncanonical sets and elements 91
§ 5. Nominal definitions 97

§ 6. Functions as objects 98
§ 7. Families of sets 102

Chapter V. Assumption and Substitution 107
§ 1. The concept of function revisited 107
§ 2. Hypothetical assertions 111
§ 3. The calculus of substitutions 120
§ 4. Sets and elements in hypothetical assertions 131
§ 5. Closures and the λ-calculus 135
§ 6. The disjoint union of a family of sets 142
§ 7. Elimination rules 144
§ 8. Propositions as sets 151

Chapter VI. Intuitionism 155
§ 1. The intuitionistic interpretation of apagoge 155
§ 2. The law of excluded middle 163
§ 3. The philosophy of mathematics 170
