

TABLE OF CONTENTS.

BOOK I.

On the Connexion of Things.

INTRODUCTION.

	PAGE
Section I. Reality, including Change, the subject of Metaphysic	I
„ II. Origin of expectations which conflict with experience	2
„ III. The foundation of experience	2
„ IV. Consistent and inconsistent scepticism	3
„ V. Probability depends on the assumption of connexion according to Law	4
„ VI. Relation of Metaphysic to experience	6
„ VII. The method of Metaphysic not that of Natural Science	7
„ VIII. In what sense the Essence of Things is unknowable	9
„ IX. Metaphysic the foundation of Psychology, not <i>vice versa</i>	11
„ X. Idea of <i>Law</i> and of <i>Plan</i> . Metaphysic must <i>start</i> from the former	14
„ XI. No clue to be found in the Dialectic Method	16
„ XII. No clue to be found in the forms of Judgment	17
„ XIII. Divisions of the subject	20
„ XIV. The natural conception of the universe	21

CHAPTER I.

ON THE BEING OF THINGS.

1. Real and unreal	23
2. Sensation the only evidence of Reality?	24
3. Sensation gives assurance of nothing beyond itself	24
4. Being of Things apart from Consciousness. Their action on each other	25
5. Questions of the <i>origin</i> and the <i>nature</i> of reality distinguished	27
6. Objective relations presuppose the Being of Things	28
7. Being apart from relations meaningless	29
8-9. Pure Being a legitimate abstraction, but not applicable to Reality.	30
10. 'Position' and 'Affirmation' meaningless apart from relations	31
11. 'Position' appears to involve the difficulties attaching to creative action	33
12. Herbart's 'irrevocable Position'	35
13. Herbart's indifference of Things to relations, inconsistent with their en- tering into relations	36
14. The isolation of Things a mere abstraction	38

CHAPTER II.

OF THE QUALITY OF THINGS.

	PAGE
15. The essence of Things	40
16. A Thing is taken to be more than its qualities	41
17. Herbart's conception of the essence of a Thing as a 'simple Quality'	42
18. A Quality need not be abstract nor dependent on a subject	44
19. How can what is simple have varying 'states'?	46
20. The common element in sensations of colour	48
21. Things only vary within certain limits	50
22. The movement of consciousness not analogous to the variations of a 'simple Quality'	51
23. 'Simple Qualities' represented by compound expressions (Herbart)	52
24. If there are Things, they must be capable of change, as the soul is	53

CHAPTER III.

OF THE REAL AND REALITY.

25. Things not of the nature of 'simple Qualities'	57
26. Things commonly described by their states	57
27. A complete conception would include past and future history of Thing	59
28. Matter as imparting reality to Qualities	60
29. Matter which has no Qualities can receive none	61
30. Matter explains nothing if it is mere 'Position'	62
31. 'Real' is a predicative conception, not a subject	64
32. A Thing as a Law	67
33. A Law need not be General?	68
34. What is that which conforms to the Law?	70
35. Danger of the antithesis between the world of Ideas and Reality	72
36. Difficulty of expressing the notion of a Law or Idea which is naturally real	74

CHAPTER IV.

OF BECOMING AND CHANGE—

37. Substance a mode of behaviour of Things, not a mysterious nucleus	76
38. How is change subject to certain limits, to be conceived?	77
39. Law of Identity does not even prove the continuous existence of Things	78
40. Resolution of all permanence into Becoming	80
41. <i>δύναμις</i> and <i>ἐνέργεια</i> in two senses	81
42. Why are consequences realised?	82
43. The Things must <i>be</i> such realisations	84
44. This would only explain development, not causation	86
45. In 'transeunt' action changes in the agent must be 'noticed' by the patient	87
46. 'Immanent' action usually assumed as obvious	87
47. Notion of Becoming compared with notion of 'states of' a persistent Thing	88
48. Quantitative comparability of factors in every effect	90
49. Degrees of Intensity of Being	91

Table of Contents.

ix

CHAPTER V.

OF THE NATURE OF PHYSICAL ACTION.

	PAGE
50. No effect due to a single active cause	93
51. Cause, Reason, and the Relation which initiates action	95
52. Modification of Causes and Relation by effect	96
53. 'Occasional Causes' and 'Stimuli'	97
54. Must the relation which initiates action be contact?	99
55. A 'causa transiens' is only preliminary to action	101
56. Difficulty of conceiving the passage of a force or state from <i>A</i> to <i>B</i>	103
57. Origin of erroneous idea that cause and effect must be equal and like	104
58. Relation of consequence to ground may be synthetic as well as analytic	106
59. How far must Things be homogeneous in order to react upon each other?	107
60. Desire to explain all processes as of one kind. 'Like known only by like'	109
61. Attempt to dispense with 'transeunt' action. Occasionalism	110
62. Neither mere 'Law' nor mere 'relation' can explain interaction of two Things	111
63. Leibnitz's 'Pre-established Harmony'	113
64. What his completely determined world gains by realisation	115
65. Complete determinism incredible	116
66. Corresponding states of different Monads. Illustration of the two clocks	118
67. Operation according to general laws necessary for active causation	120

CHAPTER VI.

THE UNITY OF THINGS.

68. What is involved in the idea of 'transeunt' operation	123
69. Pluralism and Monism	124
70. Separate Things not really independent of each other	126
71. Unity of Things analytically involved in reciprocal action	127
72. How their unity is consistent with apparent degrees of independence	128
73. The relation of the One to the Many cannot be exhibited to Perception	129
74. Alleged contradiction of regarding the One as the Many	130
75. The Logical copula inadequate to the relation between the One and the Many	131
76. Reality subject to Law of Identity in form but not in fact	134
77. The One and the Many illustrated by Herbart's 'accidental views'	135
78. Herbart admits multiplicity in the nature of individual Things	137
79. 'Leibnitz' world, when ceasing to be immanent in God, has no unity	138
80. Relations between the contents of ideas can only exist for Thought	140
81. Variable Relations between Things must be modifications in the things	142

CHAPTER VII.

CONCLUSION.

82. Real Relations are the reciprocal actions of Things conditioned by the unity which includes them	145
83. We have not to account for the origin of Motion	146

	PAGE
84. The assumption of Motion is not the same thing as the assumption of Life (as spiritual existence)	149
85. The dominant principles of any real world are prescribed by its nature and are not prior to it	149
86. The reference to 'any' real world, other than that which exists, is imaginary and illustrative	151
87. Consistency of causation has no meaning apart from the comparison of cases within the actual world	152
88. Hegel, Schelling, Weisse,—Necessity and Freedom	154
89. Necessity as an appearance produced within reality. Idealism and Realism	157
90. The Idea must have a concrete content	157
91. The Phases of the Idea must be causally connected	158
92. The Idea generates a mechanical system by which it is realised	161
93. Realism recognises the necessity of regressive interpretation	163
94. Subjectivity in relation to the possibility of Knowledge	165
95. Fichte on the world of Spirits and the world of Things	166
96. A spiritual nature seems necessary for Things <i>if</i> they are to be subjects of states	167
97. Need Things exist at all?	169
98. As mere media of effects, they can hardly be said to exist	171

BOOK II.

Cosmology.

CHAPTER I.

OF THE SUBJECTIVITY OF OUR PERCEPTION OF SPACE.

99. The genesis of our idea of Space no test of its validity	174
100. Euclidean Space is what we have to discuss	175
101. Space is not a Thing, Property, or Relation	176
102. Space not merely a Genus-concept	177
103. Kant on empty Space	179
104. Kant on Space as <i>given</i>	180
105. Why Kant denied the reality of Space	181
106. Finiteness or Infinity of World do not decide the question	182
107. Nor does Infinite divisibility of real elements, or the reverse	184
108. Real difficulties. What is Space, and how are things <i>in</i> it?	186
109. Reality of Space does not explain its properties	186
110. Do the points of real Space act upon each other?	187
111. Constructions of Space out of active points	190
112. Constructions of real Space and hypothesis of subjective Space	191
113. Nothing gained by the independent reality of Space	194
114. Things <i>in</i> Space; on hypothesis of its being subjective	195
115. Things in an independently existing Space	197
116. Relations <i>between</i> things and reactions <i>of</i> things	198
117. The movability of things	200

Table of Contents.

xi

CHAPTER II.

DEDUCTIONS OF SPACE.

	PAGE
118. Spinoza on Consciousness and Extension	202
119. Schelling on the two factors in Nature and Mind	203
120. Limit of what can be done by speculative construction. Hegel and Weisse	204
121. Deductions of the three dimensions	205
122. Three questions involved in 'Psychological' Deductions of Space	206
123. Alternatives suggested by idea of subjective Space	209
124. Can any Space represent what our Space will not?	210
125. Symbolical spatial arrangements, of sounds, etc.	211
126. No Space will represent disparate qualities	212
127. Other Spaces than common Space in what sense possible	214
128. Geometry dependent on its <i>data</i>	215
129. All constructions presuppose the Space-perception	217
130. Constructions of straight line, plane, etc. presuppose them	218
131. The sum of the angles of a triangle	220
132. Helmholtz on the possible ignorance of a third dimension	222
133. Dwellers on a sphere-surface and parallel lines	225
134. Analogy from ignorance of third dimension to ignorance of fourth	226
135. There cannot be four series 'perpendicular' to each other	229
136. Extension must be homogeneous	232
137. Riemann's 'multiplicities' are not Space unless uniform	235

CHAPTER III.

OF TIME.

138. Spatial representations of Time	238
139. The conception of empty Time	239
140. The connexion of 'Time' with events <i>in</i> it	241
141. Kant's view of Time as subjective	242
142. Kant's proof that the world has a beginning in Time	242
143. The endlessness of Time not self-contradictory	243
144. The past need not be finite because each event is finished	245
145. An infinite series may be 'given'	247
146. Time as a mode of our apprehension	248
147. Empty Time not even a condition of Becoming	250
148. Time as an abstraction from occurrence	252
149. Time as an infinite whole is Subjective	253
150. No mere systematic relation explains 'Present' and 'Past'	254
151. Indication of 'Present' to a Subject	255
152. Subjective Time need not make the Past still exist	258
153. Absence of real succession conceivable by approximation	260
154. Even thought cannot consist of a mere succession	261
155. But Future cannot become Present without succession	263
156. Empty 'Time' Subjective, but succession inseparable from Reality	265
157. Existence of Past and Future	268

CHAPTER IV.

OF MOTION.

	PAGE
158. Law of Continuity	270
159. Continuity essential to Becoming	271
160. Grounds for the Law of Persistence	273
161. The Persistence of Rest	275
162. The Persistence of Motion	276
163. Motion inconceivable without Law of Persistence	278
164. Possibility of absolute Motion, on doctrine of real Space	279
165. Possibility of absolute Rotation	281
166. Amount and direction of Motion to be accepted like any constant	282
167. Difficulty of alleged indifference of Things to change of place	283
168. On view of phenomenal Space percipient subject with organism is essential to occurrence of Motion	285
169. Solitary Motion possible, if observer is granted	288
170. 'State' corresponding to a Persistent Motion	289
171. Motion is not the same as the Measure of Motion	290
172. Parallelogram of Motions akin to Law of Persistence	291
173. Parallelogram necessarily true if only <i>motions</i> are considered	293

CHAPTER V.

THE THEORETICAL CONSTRUCTION OF MATERIALITY.

174. Matter homogeneous, or heterogeneous with common properties?	296
175. Limitation of the problem	297
176. Descartes and Spinoza on Consciousness and Extension	298
177. Schelling and Hegel; problems attempted by the latter	301
178. Kant does not connect his views of Matter and of Space	302
179. Why Kant explained Matter by Force'	304
180. 'Force' involves relation between things	306
181. 'Force' as a property of one element a figure of speech	308
182. Kant rightly implies activity on the part of Things, not mere sequence according to Law	311
183. Kant's two forces a mere analysis of the position of a thing	313
184. Still a mechanical system of forces essential, and several may attach to each element	315
185. Force can only act at a distance	316
186. Idea of 'communication' of Motion	318
187. Space no self-evident hindrance to action	321

CHAPTER VI.

THE SIMPLE ELEMENTS OF MATTER.

188. <i>Prima facie</i> grounds in favour of Atomism	324
189. Lucretius,—differences in the Atoms	326
190. Consequences of the Unity of an extended Atom	328

Table of Contents.

xiii

	PAGE
191. Notion of unextended Atoms—Herbart	331
192. Herbart's view modified—the Atoms not independent of each other	333
193. Is Matter homogeneous or of several kinds?	335
194. Homogeneous Matter not proved by constancy of Mass	337
195. Connexion of the elements with each other in a systematic unity	339
196. Plurality in space of identical elements merely phenomenal	340
197. Self-multiplication of Atomic centres conceivable	343

CHAPTER VII.

THE LAWS OF THE ACTIVITIES OF THINGS.

198. The square of the distance,—difficulties in the radiation of Force	345
199. No mechanical deduction of a primary Force	348
200. Alleged infinite attraction at no distance	348
201. Herbart's view of the 'Satisfaction' of Force, not conclusive	350
202. Philosophy desires one primary law of action	352
203. Affinity would naturally correspond to the Distance itself	353
204. Attempt to account for Square of Distance	355
205. Can Force depend on motions of acting elements?	357
206. Does Force require <i>time</i> to take effect at a distance?	358
207. Causation and Time—Reciprocal action	360
208. Idealism admits no special Laws as absolute	362
209. Conservation of Mass	363
210. Constancy of the <i>Sum of Motions</i>	364
211. Absorption of Cause in Effect	366
212. Not self-evident that there can be no gain in physical action	366
213. <i>Equality</i> and <i>Equivalence</i> distinguished	369
214. Equivalence does not justify reduction to one process	371
215. 'Compensation' in interaction of Body and Soul	372
216. The Principle of Parsimony	373

CHAPTER VIII.

THE FORMS OF THE COURSE OF NATURE.

217. Deductions of the forms of reality impossible	378
218. Possibility of explaining natural processes in detail on the view of subjective Space	380
219. Success the test of the methods of physical science	381
220. Mechanism the action of combined elements according to general laws	383
221. Mechanism as a distinct mode of natural activity—a fiction	385
222. The planetary system, light and sound	388
223. Electricity and Chemistry should not be sharply opposed to Mechanism	390
224. Motives for forming the conception of a Vital Force	392
225. Vital Force could not be one for all Organisms	393
226. Difference between organic and inorganic substances proves nothing about Vital Force	394
227. A 'Life-principle' would have to operate mechanically	395
228. Mechanical aspect of Organisms	397
229. Mechanical view indispensable but not exhaustive	399

	PAGE
230. Purpose implies a subject—God, the soul	400
231. Von Baer on purpose in 'Nature'	402
232. Unity of world determines all modes of action	404
233. The mechanical order need not exclude progress	405
234. Is there a fixed number of Natural Kinds?	408
235. Criticism of the question 'Is real existence finite or infinite?'	409
236. Development of the Cosmos—only its general principles a question for Metaphysic	414
237. Actual development of life a question for Natural History. Conclusion	415

BOOK III.

Psychology.

CHAPTER I.

THE METAPHYSICAL CONCEPTION OF THE SOUL.

Introductory. Rational and Empirical Psychology	418
238. Reasons for the belief in a 'Soul.'—1. Freedom is no reason	420
239. 2. Mental and physical processes disparate	421
240. Disparateness no proof of separate psychical substance	422
241. 3. Unity of Consciousness	423
242. Unity of the conscious Subject	424
243. The subject in what sense called 'substance'	426
244. Kant on the Substantiality of the Soul	427
245. What the Soul is; and the question of its immortality	430
246. Origin of the Soul may be gradual	432
247. Ideas of psychical and psycho-physical mechanism	435
248. Interaction between Body and Soul	436
249. Idea of a bond between Body and Soul	438
250. The Soul not a resultant of physical actions	439
251. Meaning of explaining the Soul as a peculiar form of combination between elements	441
252. Consciousness and Motion in Fechner's 'Psycho-Physik'	442

CHAPTER II.

SENSATIONS AND THE COURSE OF IDEAS.

253. The physical stimulus of sensation	445
254. The physiological stimulus of sensation	446
255. The conscious sensation	448
256. Adequate and inadequate stimuli of sense	450
257. The connexion of various classes of sensation	451
258. Weber's Law	453
259. Hypotheses as to the reason of Weber's Law	455
260. The so-called chemistry of ideas	456

Table of Contents.

XV

	PAGE
261. The disappearance of ideas from consciousness. The checking of ideas	459
262. The strength of ideas	460
263. Dim ideas	462
264. The more interesting idea conquers	463
265. Association of ideas	465
266. Herbart's theory respecting the reproduction of a successive series of ideas	467

CHAPTER III.

ON THE MENTAL ACT OF 'RELATION.'

267. Simple ideas and their relations	470
268. The necessary distinction between them	471
269. Psycho-physical attempts to explain ideas of relation	472
270. Herbart's theory of the psychical mechanism	474
271. The truer view respecting simple ideas and ideas of relation expressed in Herbartian language	476
272. The referring activity as producing universal conceptions	477
273. Attention as an activity of reference	478
274. Attention and the 'interest' possessed by ideas	479

CHAPTER IV.

THE FORMATION OF OUR IDEAS OF SPACE.

275. The subjectivity of our perception of Space	481
276. How is the perception of spatial relations possible?	482
277. Distinctions depending on Space cannot be preserved as such in the Soul	484
278. A clue needed for the arrangement of impressions by the Soul	485
279. The 'extra-impression' as a clue or ' <i>local sign</i> '	486
280. Does the 'local sign' arise in the same nerve-fibre as the main impression?	488
281. 'Local signs' must be not merely different but comparable	490
282. 'Local signs' must be conscious sensations	491
283-7. On the local signs connected with visual sensations	493
288-9. Local signs connected with the sense of touch	503
290. How these feelings are associated with movement	506

CHAPTER V.

THE PHYSICAL BASIS OF MENTAL ACTIVITY.

291. The 'seat' of the Soul	509
292. The Soul not omnipresent within the body	510
293. No reason to suppose that it has an action graduated according to distance	511
294. No suitable place can be found for it on the hypothesis that it acts by contact only	512
295. It must act directly and independently of Space, but only at certain necessary points	513

	PAGE
296. Which these points are is determined from time to time by the activities which go on in them	515
297. Our ignorance of the special functions of the central nervous organs	517
298. Ideas of a ' <i>Sensorium commune</i> ' and ' <i>Motorium commune</i> '	518
299. The organ of language	519
300. How the soul initiates action	521
301. Reproduction of the right concomitant feeling	522
302. Application of this view to the organ of language	523
303. Phrenology	524
304. The connexion of Consciousness with bodily states	526
305. Does memory depend on physical traces left in the brain?	529
306. Loss of memory	531
307. Existence of the soul during unconsciousness	533
Conclusion	535

INDEX	537
-----------------	-----
