

CONTENTS

1. UNIVERSAL TIME	
1.1. The 'elimination' of time	1
1.2. Trend and symmetrical time	4
1.3. Irreversible phenomena	9
1.4. Evolution	12
1.5. The cosmological origin of time	19
1.6. Time and the universe	24
1.7. Absolute time	33
1.8. Relational time	36
1.9. Cyclic time	39
1.10. The scale of time	41
2. HUMAN TIME	
2.1. Time and the mind	48
2.2. The prehistoric origin of the idea of time	51
2.3. The historical development of the idea of time	54
2.4. Temporal perception and judgment (i)	59
2.5. Temporal perception and judgment (ii)	64
2.6. Is there a standard unit of perceptual time?	71
2.7. The psychological present	74
2.8. Memory and the concept of the past	77
2.9. Time and the psychological aspects of memory (i)	83
2.10. Time and the psychological aspects of memory (ii)	90
2.11. Time and the neurophysiological basis of memory	97
2.12. Time, memory and personal identity	111
3. BIOLOGICAL TIME	
3.1. Physiological processes and man's sense of time	123
3.2. Time and animal navigation	129
3.3. Photoperiodism	135
3.4. Biological rhythms in animals and plants (i)	140
3.5. Biological rhythms in animals and plants (ii)	150
3.6. Biological rhythms in man	159
4. MATHEMATICAL TIME	
4.1. Time and number	174
4.2. Time, geometry, and functional variation	178

CONTENTS

ix

4.3. Time and the calculus	185
4.4. Zeno's paradoxes	190
4.5. Temporal atomicity	200
4.6. Mathematical time as a type of serial order	205
4.7. The measurement of time	215
5. RELATIVISTIC TIME	
5.1. Time experienced and time inferred	224
5.2. The determination of time-at-a-distance (i)	230
5.3. The determination of time-at-a-distance (ii)	238
5.4. The correlation of time-perspectives	245
5.5. Time dilatation	253
5.6. The clock paradox	260
6. SPACE-TIME AND COSMIC TIME	
6.1. The concept of space-time	270
6.2. Space-time and time	276
6.3. Cosmic time and the expanding universe (i)	283
6.4. Cosmic time and the expanding universe (ii)	288
6.5. The existence of cosmic time	302
6.6. The limits of cosmic time	307
6.7. The existence of singularities in space-time	313
7. THE NATURE OF TIME	
7.1. Time reversal and the asymmetry of time	321
7.2. The causal theory of time	323
7.3. The statistical theory of time	327
7.4. Cosmology and the order of succession of phenomena	339
7.5. The transitional nature of time	344
7.6. The Minkowski diagram and the nature of time	352
7.7. Time and the fundamental constants of physics	361
7.8. Precognition and the nature of time	364
7.9. The dimensionality of time	368
7.10. Conclusions	370
APPENDIX	
Derivation of the complete set of Lorentz formulae	379
INDEX	382
