PREFACE	7
INTRODUCTION	15
1 MOTION AND FORCE	
<i>Newton's Laws</i>	19
<i>Gravity and Other Forces</i>	23
<i>Momentum and Energy</i>	25
<i>Collisions</i>	31
<i>Angular Momentum</i>	34
<i>Starting Conditions and Degrees of Freedom</i>	38
2 ELECTRICITY AND MAGNETISM	
<i>Coulomb's Law</i>	41
<i>Lines of Force</i>	45
<i>Field Laws or Action at a Distance</i>	50
<i>Electromagnetism</i>	52
<i>Induction. Generator and Transformer</i>	57
<i>Completion of Laws</i>	61
<i>Electromagnetic Waves</i>	64
<i>Field Energy</i>	68
3 LIGHT	
<i>Spectrum. Interference. Waves</i>	70
<i>Diffraction, Polarization, Speed</i>	75
<i>Light Consists of Electromagnetic Waves</i>	78
<i>Emission Theory. Geometrical Optics</i>	80
4 ATOMS AND ELECTRONS	
<i>Chemistry and the Atomic Hypothesis</i>	87
<i>The Size of an Atom. Ions</i>	90
<i>The Electron</i>	93
<i>What are Atoms made of?</i>	95
<i>Why Don't Atoms Collapse?</i>	98
<i>Many Facts Can be Understood</i>	99
5 ATOMS IN CROWDS: HEAT AS IRREGULAR MOTION	
<i>Quantity of Heat. Heat and Disorder</i>	102
<i>Heat and Atomic Motion</i>	105
<i>Certainty and the Laws of Chance</i>	109

	<i>page</i>
<i>More Tests and Some Difficulties</i>	112
<i>Solids and Liquids</i>	114
<i>Radiant Heat</i>	118
6 RELATIVITY	
<i>General Remarks</i>	121
<i>Motion and Rest</i>	123
<i>The Lorentz Contraction</i>	125
<i>How to Compare Lengths and Times</i>	128
<i>Composition of Velocities</i>	133
<i>Mechanics of Fast-Moving Objects</i>	134
<i>Applications and Confirmation</i>	138
<i>Principle of Equivalence</i>	141
<i>General Relativity</i>	142
7 QUANTA, WAVES AND PARTICLES	
<i>The Quantum Hypothesis. Photons</i>	146
<i>Electron Diffraction. Standing Waves</i>	152
<i>Variable Wavelength</i>	157
<i>The Hydrogen Atom</i>	161
<i>Particles and Waves</i>	164
<i>The Uncertainty Principle</i>	169
8 THE BEHAVIOUR OF ATOMS	
<i>Hydrogen and Helium</i>	177
<i>Other Light Atoms. The Exclusion Principle</i>	180
<i>Angular Momentum</i>	183
<i>The Atomic Beam Experiment. Spin</i>	189
<i>Electron Shells, Ionic Molecules</i>	193
<i>Other Types of Molecules</i>	196
<i>Solids, Metals, Liquids</i>	199
<i>Passage Through a Potential Barrier</i>	205
9 ELECTRONS AT HIGH SPEED	
<i>Negative Energies. A Difficulty</i>	210
<i>Spin. Positrons</i>	213
<i>Forces at High Speed. More Difficulties</i>	218
<i>New Methods. Lamb Shift</i>	220
10 THE ATOMIC NUCLEUS	
<i>Radioactivity. Alpha-Decay</i>	225
<i>Wave Mechanics Solves Another Paradox</i>	229
<i>Splitting the Nucleus</i>	231
<i>New Equipment</i>	233

CONTENTS

13

	<i>page</i>
<i>Neutrons. Isotopes. Mass Defect</i>	237
<i>Nuclear Forces</i>	240
<i>Shell Model. Excited States</i>	244
<i>Beta Rays</i>	245
<i>Fission. Sources of Energy</i>	249
11 MESONS AND OTHER NEW PARTICLES	
<i>Cosmic Rays and Tools for their Study</i>	255
<i>Known Particles</i>	259
<i>Mesons</i>	261
<i>Yukawa. More Mesons</i>	264
<i>Beyond the Mesons. A New Chapter Opens</i>	269
WHERE DO WE STAND?	273
INDEX	279
