PREFACE	VII
INTRODUCTION	1

CHAPTER I

ELEMENTS. CONCEPT OF CARDINAL NUMBER

§ 1.	CONCEPT OF SET. EXAMPLES OF SETS.	6
	1. Examples of Sets 6. — 2. On Cantor's Definition of Set 15	
§ 2.	THE FUNDAMENTAL CONCEPTS. FINITE AND INFINITE	20
	1. Equality 20. — 2. Subsets 21. — 3. Sum, Inner Product, Difference 25. — 4. Representation and Equivalence 29. — 5. Finite and Infinite Sets. 37. — Exercises 42.	
§ 3.	DENUMERABLE SETS	43
	1. Denumerability 43. — 2. Simplest Examples and Theorems 45. — 3. The Set of Rational Numbers 47. — 4. The Set of Algebraic Numbers 53. — 5. Applications to Infinite Sets in General 57. — Exercises 60.	
§ 4.	THE CONTINUUM. TRANSFINITE CARDINAL NUMBERS	61
	1. Formulation of the Problem 61. — 2. Proof of the non-Denumerability of the Continuum 64. — 3. Remarks and Supplements to the Proof 65. — 4. Generalization of Theorem I 70. — 5. The Existence of Transcendental Numbers 74. — 6. The Concept of Cardinal Number. The Cardinals \aleph_0 and \aleph . 76. — 7. Further Analysis and Criticism of the Definition of Cardinal 80. — 8. The Set of all Functions and its Cardinal 84. — Exercises 87.	

CHAPTER II

EQUIVALENCE AND CARDINALS

§ 5.	ORDERING OF CARDINALS	89
	1. Definition of Order 89. — 2. Simple Consequences 92. — 3. Cantor's Theorem. The Power-Set 94. — 4. The Equivalence Theorem 97. — 5. The Problem of Comparability 104. — Exercises 105.	
§ 6.	ADDITION AND MULTIPLICATION OF SETS AND CARDINALS . .	106
	1. Preliminary Remarks 106. — 2. Addition of Sets 109. — 3. A Fundamental Property of Addition 110. — 4. Addition of Cardinals 112. — 5. Formal Laws. Examples 115. — 6. Multiplication of Sets 118. — 7. The Multiplication of Cardinals and its Formal Laws 124. — 8. Inverse Operations. Inequalities between Cardinals 129. — 9. Examples of the Multiplication of Cardinals	

	134. — 10. The Cardinal of Two-dimensional Continua	136. — 11. The General Concept of Meet. Boolean Algebra	141. — Exercises	145.
§ 7.	EXPONENTIATION OF CARDINALS. THE PROBLEM OF INFINITESIMALS.			
	1. Exponentiation as Repeated Multiplication	146. — 2. Definition of Exponentiation by means of the Insertion-Set	147. — 3. The Power-Set	150. — 4. Formal Laws of Exponentiation
	152. — 5. The Power-Set of a Denumerable Set	154. — 6. Other Examples of Exponentiation	156. — 7. The Problem of Infinitely Small Magnitude (Infinitesimals)	162. — 8. Infinitesimals and non-Archimedean Domains
	165. — Exercises	168.		

CHAPTER III

ORDER AND SIMILARITY. ORDER-TYPES
AND ORDINAL NUMBERS

§ 8.	ORDERED SETS, SIMILARITY AND ORDER-TYPES			
	1. Introductory Remarks	171. — 2. Order-Relation and Ordered Sets	175. — 3. Similarity	182. — 4. The Concept of Order-Type
	189. — 5. Addition of Two Order-Types	193. — 6. General Addition of Order-Types	197. — 7. On the Multiplication of Order-Types	203. — Exercises
	211.			
§ 9.	LINEAR SETS OF POINTS			
	1. Dense or Continuous Ordered Sets	213. — 2. Examples	216. — 3. The Type η of all Rationals	221. — 4. The Type λ of the Linear Continuum
	226. — 5. Accumulation Point and Related Subjects	230. — 6. Examples	233. — Exercises	239.
§ 10.	GENERAL THEORY OF WELL-ORDERED SETS. FINITE SETS			
	1. The Concept of Well-Ordered Sets	240. — 2. Transfinite Induction	247. — 3. Comparability of Well-Ordered Sets	254. — 4. Addition and Multiplication. Ordinal Number
	258. — 5. Elementary Properties of Well-Ordered Sets	262. — 6. On Finite Sets and their Ordinals	269. — Exercises	273.
§ 11.	ORDINALS AND ALEPHS. THE WELL-ORDERING THEOREM			
	1. The Arrangement of Ordinals according to Magnitude	274. — 2. The Comparability of Ordinals	277. — 3. Exponentiation. The Series of Ordinals	283. — 4. Arithmetic of Ordinals
	290. — 5. Alephs and Initial Numbers	298. — 6. The Well-Ordering Theorem	306. — The General Comparability of Sets and Cardinals	315. — Exercises
	321.			
§ 12.	CONCLUSION: THE SIGNIFICANCE OF SET THEORY			
	324			
	INDEX OF AUTHORS	333		
	INDEX OF TERMS AND SIGNS	339		
	BIBLIOGRAPHY	343		
	SUPPLEMENTARY INDEX OF AUTHORS MENTIONED IN THE BIBLIOGRAPHY	475
