<i>Introduction by</i> JAMES R. NEWMAN	xv
<i>Preface by</i> KARL PEARSON	lxiii

## CHAPTER I. NUMBER

§1	<i>Number is Independent of the order of Counting</i>	3
2	<i>A Sum is Independent of the order of Adding</i>	4
3	<i>A Product is Independent of the order of Multiplying</i>	7
4	<i>The Distributive Law</i>	14
5	<i>On Powers</i>	16
6	<i>Square of <math>a + 1</math></i>	17
7	<i>On Powers of <math>a + b</math></i>	19
8	<i>On the Number of Arrangements of a Group of Letters</i>	23
9	<i>On a Theorem concerning any Power of <math>a + b</math></i>	25
10	<i>On Operations which appear to be without Meaning</i>	30
11	<i>Steps</i>	32
12	<i>Extension of the Meaning of Symbols</i>	35
13	<i>Addition and Multiplication of Operations</i>	37
14	<i>Division of Operations</i>	39
15	<i>General Results of our Extension of Terms</i>	41

## CHAPTER II. SPACE

§1	<i>Boundaries take up no Room</i>	43
2	<i>Lengths can be Moved without Change</i>	47
3	<i>The Characteristics of Shape</i>	50
4	<i>The Characteristics of Surface Boundaries</i>	58
5	<i>The Plane and the Straight Line</i>	61
6	<i>Properties of Triangles</i>	63
7	<i>Properties of Circles; Related Circles and Triangles</i>	69
8	<i>The Conic Sections</i>	74

9	<i>On Surfaces of the Second Order</i>	79
10	<i>How to form Curves of the Third and Higher Orders</i>	85

## CHAPTER III. QUANTITY

§1	<i>The Measurement of Quantities</i>	88
2	<i>The Addition and Subtraction of Quantities</i>	91
3	<i>The Multiplication and Division of Quantities</i>	92
4	<i>The Arithmetical Expression of Ratios</i>	94
5	<i>The Fourth Proportional</i>	98
6	<i>Of Areas; Stretch and Squeeze</i>	105
7	<i>Of Fractions</i>	107
8	<i>Of Areas; Shear</i>	111
9	<i>Of Circles and their Areas</i>	114
10	<i>Of the Area of Sectors of Curves</i>	119
11	<i>Extension of the Conception of Area</i>	121
12	<i>On the Area of a Closed Tangle</i>	124
13	<i>On the Volumes of Space-Figures</i>	126
14	<i>On the Measurement of Angles</i>	129
15	<i>On Fractional Powers</i>	131

## CHAPTER IV. POSITION

§1	<i>All Position is Relative</i>	134
2	<i>Position may be Determined by Directed Steps</i>	136
3	<i>The Addition of Directed Steps or Vectors</i>	139
4	<i>The Addition of Vectors obeys the Commutative Law</i>	144
5	<i>On Methods of Determining Position in a Plane</i>	145
6	<i>Polar Co-ordinates</i>	149
7	<i>The Trigonometrical Ratios</i>	151
8	<i>Spirals</i>	152
9	<i>The Equiangular Spiral</i>	156
10	<i>On the Nature of Logarithms</i>	160
11	<i>The Cartesian Method of Determining Position</i>	164
12	<i>Of Complex Numbers</i>	170
13	<i>On the Operation which turns a Step through a given Angle</i>	174

14	<i>Relation of the Spin to the Logarithmic Growth of Unit Step</i>	177
15	<i>On the Multiplication of Vectors</i>	180
16	<i>Another Interpretation of the Product of Two Vectors</i>	185
17	<i>Position in Three-Dimensioned Space</i>	187
18	<i>On Localized Vectors or Rotors</i>	190
19	<i>On the Bending of Space</i>	193

### CHAPTER V. MOTION

§1	<i>On the Various Kinds of Motion</i>	205
2	<i>Translation and the Curve of Positions</i>	207
3	<i>Uniform Motion</i>	211
4	<i>Variable Motion</i>	214
5	<i>On the Tangent to a Curve</i>	219
6	<i>On the Determination of Variable Velocity</i>	224
7	<i>On the Method of Fluxions</i>	227
8	<i>Of the Relationship of Quantities, or Functions</i>	229
9	<i>Of Acceleration and the Hodograph</i>	234
10	<i>On the Laws of Motion</i>	239
11	<i>Of Mass and Force</i>	241
	<i>Bibliography of the Major Writings of William Kingdon Clifford</i>	245
