PART I MODAL PROPOSITIONAL LOGIC	
<b>1 Non-modal Propositional Calculus</b>	<b>3</b>
Primitive symbols and formation rules of PC (4) – Interpretation (5) – Further operators (7) – Interpretation of $\cdot$ , $\supset$ , $\equiv$ (8) – Validity (10) – Testing for validity: (i) the truth-table method (11) – Testing for validity: (ii) the Reductio method (12) – Substitution of equivalents (14) – Conjunctive normal form (16) – Axiomatization of PC (16) – The system PM (17) – Consistency (19) – Completeness (19).	
<b>2 The System T</b>	<b>22</b>
The basic modal notions (22) – Systems of modal logic (25) – The system T (30) – Method of setting out proofs (31) – Proofs of theorems (33) – Consistency of T (41) – Exercises (42).	
<b>3 The Systems S4 and S5</b>	<b>43</b>
Introduction (43) – The system S4 (46) – Modalities in S4 (47) – The system S5 (49) – Modalities in S5 (49) – Modal functions and modal degree (50) – Modal conjunctive normal form (54) – MCNF theorem (55) – Modal functions in S4 (57) – The Brouwerian system (57) – Consistency (59) – Collapsing into PC (59) – Exercises (60).	
<b>4 Validity in T, S4 and S5</b>	<b>61</b>
The PC game (61) – The T game (63) – The S4 game (66) – The S5 game (67) – Some results (68) – Formal definitions of validity (71) – The intuitive interpretation of models and validity (75) – Exercises (80).	

<b>5 T: Decision Procedure and Completeness</b>	82
Testing for T-validity (82) – Semantic diagrams as a decision procedure for T (95) – The completeness of T (96) – Exercises (104).	
<b>6 S4 and S5: Decision Procedures and Completeness</b>	105
S4-diagrams (105) – The completeness of S4 (112) – S5-diagrams (115) – An alternative decision procedure for S5 (116) – The completeness of S5 (121) – Exercises (122).	
<b>7 Some Alternative Bases for T, S4 and S5</b>	123
Alternative bases for T (123) – Alternative bases for S4 (125) – Alternative bases for S5 (127) – Exercises (130).	
PART II MODAL PREDICATE LOGIC	
<b>8 The Lower Predicate Calculus</b>	133
The non-modal lower predicate calculus (133) – Interpretation (135) – Validity in LPC (135) – Axiomatization (137) – Modal lower predicate calculi (141) – The consistency of modal LPC (145) – Validity in modal LPC (145) – The monadic modal LPC (148).	
<b>9 The Completeness of Modal LPC</b>	149
The general structure of a Henkin proof (149) – Maximal consistent sets (150) – Some properties of maximal consistent sets (152) – The completeness of PM (154) – The completeness of T, S4 and S5 (155) – The completeness of (non-modal) LPC (159) – The completeness of modal LPC (164).	
<b>10 Modality and Existence</b>	170
Validity without the Barcan formula (170) – Completeness without the Barcan formula (174) – Interpretation of modal LPC models (177) – Kripke's semantics for modal LPC (178) – Modality <i>de dicto</i> and modality <i>de re</i> (183).	

**11 Identity and Description in Modal LPC** 189

LPC with identity (189) – Modal LPC with identity (189) – Semantics for modal LPC with identity (192) – Contingent identity systems (195) – Semantics for T + I and S4 + I (201) – Descriptions (202) – Introducing descriptions by definition (206) – Sets and attributes (209).

PART III A SURVEY OF MODAL LOGIC

**12 The Lewis Systems (I)** 213

Historical preamble (213) – The ‘paradoxes of implication’ (215) – The system S1 (216) – S1 and T compared (223) – ‘*T*-principles’ in S1 (228) – The system S2 (230) – The system S3 (233) – The system S4 (236) – The system S5 (237).

**13 The Lewis Systems (II)** 239

The distinctness of S1–S5 (239) – Alternative bases for the Lewis systems (244) – The Lewis systems and T (253).

**14 Other Modal Propositional Systems** 255

The system S0.5 (256) – Systems with the Brouwerian axiom (257) – Systems with generalized S4 axioms (259) – Systems between S4 and S5 (260) – Systems between S3 and S5 (264) – Extensions of S4 not contained in S5 (265) – Non-regular systems (267) – Other modal predicate calculi (272).

**15 Validity and Decision Procedures for Various Systems** 274

Validity in S2 and S3 (274) – Decision procedures for S2 and S3 (279) – Validity in S6–S8 (281) – Decision procedures for S6–S8 (282) – The systems S3.5 and S9 (284) – The system S0.5 (286) – Systems containing T (288) – The existence postulate (290).

<b>16 Non-standard Systems</b>	<b>293</b>
Systems with primitives other than $L$ or $M$ (293) – The system $E$ (298) – Systems without the axiom of necessity (301) – Systems without any theses of the form $L\alpha$ (302) – A system without the interdefinability of $L$ and $M$ (303) – Systems based on non-classical propositional calculi (305) – The $L$ -modal system (307).	
<b>17 Boolean Algebra and Modal Logic</b>	<b>311</b>
Boolean algebras (311) – Boolean algebra and PC (314) – Boolean algebras with added operators (315) – Boolean algebras and the system $T$ (316) – Boolean algebras and $T$ -validity (325).	
Appendix 1 <b>Natural Deduction and Modal Systems</b>	<b>331</b>
Appendix 2 <b>Entailment and Strict Implication</b>	<b>335</b>
Appendix 3 <b>Axiomatic Bases for Propositional Modal Systems</b>	<b>340</b>
Appendix 4 <b>Notation</b>	<b>347</b>
Appendix 5 <b>Kripke's Model Structures and Hintikka's Model Sets</b>	<b>350</b>
Solutions to Exercises	<b>353</b>
Bibliography	<b>356</b>
Index of Authors	<b>373</b>
Index of Subjects	<b>377</b>
List of Symbols and Important Rules	<b>387</b>
