CONTENTS

PART I

THE CLASSICAL PROPOSITIONAL AND FUNCTIONAL CALCULI

I. TRUTH-FUNCTIONS AND TAUTOLOGIES

§ 1. The Subject-matter of Logic 1
§ 2. Truth-functions 4
§ 3. Evaluation of Truth-functional Forms, and the Inter-definability of Truth-functions 9
§ 4. Tautologous Formulae, and Rules of Inference 15

II. AXIOMATIZATIONS OF THE PROPOSITIONAL CALCULUS

§ 1. The System of *Principia Mathematica* 22
§ 2. Single-axiom Systems and Systems without Axioms 30
§ 3. Normal Forms and the Proof of Completeness 37

III. SYSTEMS WITH PROPOSITIONAL CONSTANTS AND FUNCTORIAL VARIABLES

§ 1. The Implicational Calculus and Wajsberg's System in *C* and o 48
§ 2. Quine's Completeness Proof for the Full Calculus 52
§ 3. Wajsberg's Completeness Proof for the Restricted Calculus 61
§ 4. Logic, Metalogic, and Functorial Variables 64

IV. THE THEORY OF QUANTIFICATION

§ 1. Predicates and Quantifiers 72
§ 2. Predications of a Plurality of Subjects, and Multiple Quantification 85
§ 3. Quantification within the Propositional Calculus 90
§ 4. Quantification and Equivalential Calculi: Definition Re-examined 94

PART II

THE TRADITIONAL LOGIC OF TERMS

I. THE ARISTOTELIAN SYLLOGISTIC

§ 1. The Aristotelian Propositional Forms and their Logical Relations 103
§ 2. The Aristotelian Syllogistic Forms and their Logical Relations 110
§ 3. Propositions *κατὰ πρόσληψιν* 121

II. CATEGORICAL FORMS WITH NEGATIVE, COMPLEX, AND QUANTIFIED TERMS

§ 1. Negative Terms in Boethius and de Morgan 126
§ 2. The Rules of Equipollence 134
§ 3. Syllogistic with Conjunctive and Alternative Terms 138
§ 4. Quantification of the Predicate 146

III. SINGULAR AND EXISTENTIAL PROPOSITIONS

§ 1. Singulars and Generals in Traditional and Modern Logic 157
§ 2. Existential Propositions, and the Existential Import of General Categoricals 164
§ 3. Venn's Diagrams, and the Quantified Logic of Properties 170
§ 4. Connotative Singular Terms: The Theory of Descriptions 178

PART III

MODAL, THREE-VALUED, AND EXTENSIONAL SYSTEMS

I. THE LOGIC OF MODALITY

§ 1. Modality and its Resemblance to Quantity 185
§ 2. Modality and Implication 193
§ 3. Iterated Modalities 198
§ 4. Combined Modality and Quantification 209
§ 5. Extensions of the Notion of Modality 215
§ 6. Deontic Logic 220

II. THREE-VALUED AND INTUITIONIST LOGIC

§ 1. Two-valued and Three-valued Arithmetic 230
§ 2. The Sea-Battle Tomorrow 240
§ 3. The Intuitionist Calculus 250

III. THE LOGIC OF EXTENSION

§ 1. The Logic of Classes 260
§ 2. Relations in Extension and the Foundations of Arithmetic 273
§ 3. The Paradoxes and the Theory of Types 283
§ 4. Ontology and Mereology 293

APPENDIX I. POSTULATE SETS FOR LOGICAL CALCULI 301

APPENDIX II. SOME METHODS OF PROOF 318

APPENDIX III. SELECT BIBLIOGRAPHY 323

INDEX 336
