Preface	page vii
<b>1 Analysis of plurality-quantifiers</b>	
A The interdefinability of 'many', 'few' and 'nearly all'	1
B Elements of convention in setting up these interrelations	2
C The analogy with the relations between 'some', 'none' and 'all'	4
D Limits to the analogy in cases of multiple quantification	6
E Analysis in terms of the concept of a manifold	7
F Double-quantifier form of first-order symbolization	9
G Single-quantifier form of first-order symbolization: semantics for this form	12
<b>2 The weaker system <math>W</math></b>	
Introduction	15
A The vocabulary and rules of well-formedness	16
B Rules of derivation	19
C Elementary sequents	25
D Sequents with both classical and plural quantifiers	36
E Arguments with propositional functions in more than one variable	39
F Reduction in the number of rules	41
G Interpretation, validity, soundness of the rules	43
H Completeness	52
<b>3 The stronger systems</b>	
A The primitive basis of $S_n$	59

B The interpretation of $S_n$	60
C Sequents of $S_n$	61
D 'A few'	63
E A yet stronger system	65
<b>4 Further refinement: the attributive systems <math>W^k</math>, <math>S^k</math>, and <math>T^k</math></b>	<b>68</b>
Appendix	79
Index	83
