CONTENTS

INTRODUCTION 1

I. AUXILIARY NOTIONS AND THEOREMS OF ARITHMETIC 14
1. Mapping of integers onto pairs and triples of integers 14
2. Mapping of integers onto finite sequences of integers 15
3. Logical symbols 17
4. Relations and functions 18
5. Inductive definitions 21

II. THE SYSTEM (S) AND ITS SYNTAX 24
1. Preliminary description of the system 24
2. Expressions and integers 25
3. Properties of functional forms and matrix forms 29
4. Explicit definitions of sets $\mathfrak{Ff}$, $\mathfrak{Mf}$, and of functions *Oc*, *Ind*, and *S* 32
5. Axioms of (S) 37
6. Formal proofs 40

III. ARITHMETICAL THEOREMS PROVABLE IN (S) 43
1. Abbreviations 43
2. The propositional calculus 43
3. The functional calculus 44
4. Theory of identity 45
5. Induction 47
6. Addition and multiplication of digits 49
7. Theorems on inequalities 50
8. Matrices satisfied by exactly one digit 54

IV. SEMANTICS OF (S) 56
1. Representability of infinite sequences 56
2. Values of functional forms and the notion of satisfaction for matrix forms 57
3. Inductive definition of $Val(\varphi, m)$ and $\mathfrak{Stf}(\Phi, m)$ 58
4. Explicit definition of *Val* and $\mathfrak{Stf}$ 60
5. Class $\mathfrak{Tr}$ 63

V. RECURSIVITY AND DEFINABILITY OF FUNCTIONS AND RELATIONS 73
1. The notion of $\mathfrak{R}$-definability 73
2. General properties of $\mathfrak{R}$-definable functions and relations 75

3. Recursivity of functions and relations corresponding to the syntactical notions 80
4. A theorem concerning the min-operator 82
5. Recursively enumerable sets 86

VI. PROOFS OF INCOMPLETENESS THEOREMS 88
1. $\mathfrak{R}$-undefinability of the set $\mathfrak{T}_{\mathfrak{R}}$ 88
2. Proofs of the incompleteness theorem 90
3. Generalizations 97
4. Discussion of the incompleteness theorems 99

APPENDIX. SOME FURTHER RESULTS OF GÖDEL'S THEORY 103
1. Undecidability of the sentence expressing the consistency of (S) 103
2. Problem of truth of undecidable sentences 107
3. Sentences provable simultaneously in (S) and (S_1) . . . 112
