

CONTENTS

PART I

THE DOCTRINE OF THE ESSAY

CHAPTER I

THE PROBLEM OF KNOWLEDGE AND THE 'NEW WAY OF IDEAS'

SECT.	PAGE
1. The main problem of the <i>Essay</i> is to determine the nature and possible extent of human knowledge	1
2. The characteristics of the knowledge it investigates	2
3. While the typical examples of this knowledge are found in the mathematical sciences, its most important contents are the objects of our moral and religious consciousness	4
4. Of the problem thus propounded Locke thought he had found a solution	7
5. The originality of his position	9
6. His division of the sciences and its bearing on the scope and pre-suppositions of his enquiry	11
7. Ideas: current applications of the term and Locke's usage	13
8. The 'formal' and 'objective' reality of ideas	15
9. The importance of the distinction and its dangers	16
10. Locke's attitude to the distinction	18
11. The subordinate place of Psychology in the <i>Essay</i>	21
12. The consequences which Locke drew from the nature of ideas as explicit contents of thought	22
(a) They cannot be 'stored' in the memory	23
(b) They cannot be confused	24
(c) They are incapable of change and their relations are eternal	25
13. Locke's later reflections on the metaphysical nature of ideas and their relation to the mind	26

CHAPTER II

THE POLEMIC AGAINST INNATE PRINCIPLES

SECT.	PAGE
1. The appeal to 'Nature' in the seventeenth century: its vagueness and confusion	29
2. The question of innate principles not one of logical priority or of mental activity	31
3. Its bearing upon Locke's theory of knowledge	33
4. The rival theory of certainty	34
5. The motives of Locke's polemic	36
6. His arguments	37
7. The polemic primarily directed against 'scholastic men'	39
8. Its wider reference	42

CHAPTER III

THE ORIGIN AND FORMATION OF IDEAS

1. The consideration of ideas a preparation for that of knowledge	45
2. The significance of the enquiry into the origin of ideas. The Composition theory and its influence	46
3. The nature of 'simple' ideas	50
4. Their origin in experience	52
5. Simple ideas of Sensation and the conditions of their reception	54
6. 'Reflection' and its conditions	55
7. In what sense the mind is passive in the reception of simple ideas	57
8. The part played by mental activity in the actual process of experience	59
9. Their passive reception a guarantee of the 'reality' of simple ideas	61
10. In what sense complex ideas are 'the work of the mind'	61
11. A unifying function of the mind involved in all complex ideas	62
12. 'Compounding,' 'comparing,' and 'abstracting'	63
13. Ideas of relations	66
14. General ideas	67

CHAPTER IV

THE CONTENTS OF OUR IDEAS OF MODES

1. Locke's objective classification of complex ideas	71
2. His account of simple modes implies that the simple idea is a universal	72
3. Our ideas of number	73
4. Space and its modes	74

SECT.	PAGE
5. Duration and its modes	78
6. Our ideas of 'pure' space and 'pure' duration.	82
7. Our idea of infinity	83
8. Our ideas of non-quantitative simple modes and of mixed modes	87

CHAPTER V

OUR IDEAS OF SUBSTANCE, CAUSALITY AND IDENTITY

1. Special features of these ideas	91
2. Analysis of our ideas of substances	92
3. Substance a supposition based on a necessity of thought	92
4. The part played by custom in the formation of our ideas of particular substances and their kinds	93
5. The real nature of the inconsistency involved in Locke's position	94
6. We can form no positive idea of substance, which must, however, have a character of its own	95
7. The substance of mind and matter equally unknowable	97
8. Our ideas of matter	99
9. Its primary and secondary qualities	100
10. Comparison between our ideas of matter and mind	103
11. Our ideas of power and cause how related	105
12. They both imply active efficiency, a clear idea of which can only be obtained from our experience in willing	106
13. The justification of the application of these ideas to unwilled changes	108
14. Causation and uniformity	109
15. The idea of identity and its origin	111
16. Identity of substance and other forms of identity	111
17. Identity of self determined by 'continued consciousness'	114
18. It involves the presence of the higher intellectual powers	115
19. Identity of self and identity of person	116
20. Metaphysical significance of Locke's theory of identity of self	118

CHAPTER VI

THE GENERAL NATURE OF KNOWLEDGE

1. Subject of the chapter	120
2. The distinction between knowledge and opinion	121
3. Intuition and demonstration	124
4. The objectivity and necessity of knowledge	126
5. The 'reality' of knowledge	128
6. The reality of simple ideas	130

SECT.	PAGE
7. The reality of ideas of modes and relations	131
8. The reality of ideas of substances	132
9. The instructive or synthetic character of real knowledge	135
10. The nature and grounds of opinion	137
11. Error	140

CHAPTER VII

THE KINDS AND LIMITS OF KNOWLEDGE

1. Initial four-fold classification of knowledge	142
2. First, of identity and diversity. This a presupposition rather than a kind of knowledge	143
3. Significant affirmation is 'in concrete' and relational	143
4. Secondly, of relations between abstract ideas	145
5. Examples of such knowledge	147
6. The demonstrative character of mathematics	148
7. Upon what it depends	150
8. Influence of mathematics upon Locke's general conception of knowledge	154
9. Locke's view of the subject matter of Ethics	155
10. The demonstrability of Ethics	157
11. Thirdly, of coexistence	160
12. Why it is so narrow	162
13. Fourthly, of real existence	166
14. No direct passage from idea to real existence. The ontological argument	168
15. Existence of Self known by intuition	169
16. 'Sensitive' knowledge of the existence of material things	172
17. Locke's final two-fold classification of knowledge	176
18. His suggestions of a possible higher form of knowledge	179

PART II
THE HISTORICAL RELATIONS OF
LOCKE'S DOCTRINE

CHAPTER VIII

LOCKE AND SCHOLASTICISM

SECT.	PAGE
1. The difficulty of determining the sources of the doctrine of the <i>Essay</i>	182
2. The principal influences which affected Locke's thought . . .	183
3. Locke's view of Aristotle	185
4. The theory of knowledge attributed by Locke to the Schoolmen .	186
5. 'Maxims' not the 'foundations' of our knowledge	187
6. The syllogism not the 'only proper instrument' of knowledge .	188
7. Locke's relation to the scholastic metaphysical scheme . . .	189
8. The conception of substance	190
9. The unreality of relations	193
10. The doctrine of essence	196
11. Locke's criticism of the theory of substantial forms and of its supposed bearing on classification	199
12. Causation	202
13. The idea of God	204

CHAPTER IX

LOCKE AND DESCARTES

1. Locke's own account of his relation to Descartes	205
2. Importance of the Cartesian influence as regards	
(a) The nature of rational knowledge;	206
(b) The conception of self-consciousness	207
3. The different spirits in which they approach the question of knowledge	207
4. (A) The nature of rational knowledge. Similarities of view .	211
5. Locke's modification of the Cartesian view	212
6. His rejection of conceivability as a test of truth	214
7. His insistence upon synthetical judgments	215
8. His recognition of a second or empirical type of knowledge . .	215
9. His dissent from the Cartesian logic illustrated by his criticism, (a) of the ontological argument	216

SECT.	PAGE
10. (b) of the doctrine that thought is the essence of mind	217
11. (c) of the doctrine that extension is the essence of matter	219
12. (B) The Cartesian conception of self-consciousness: its influence seen in Locke's theory of our knowledge of self, and in his accept- ance of the representative theory of perception	222
13. The point of view of the <i>Essay</i> reached by a transformation of the Cartesian conception	223
14. The new point of view fatal to the dogmatic dualism of Descartes	224
15. Influence of the different views of the principle of self-consciousness held by Locke and Descartes upon their psychology	226
16. Descartes' theory of innate ideas. Its two forms	228
17. The bearing of Locke's polemic against innate principles upon Descartes' position	230
18. Connection of the theory of innate ideas with defects in the Cartesian logic	231

CHAPTER X

LOCKE AND CONTEMPORARY ENGLISH PHILOSOPHY

1. No positive influence from Bacon or Hobbes	233
2. Locke and the Cambridge Platonists	236
3. Similarity of their views as to the nature and content of rational knowledge	238
4. Locke and Cumberland	241
5. The nature of space. Views of Hobbes, More, and Newton	245
6. Locke's earlier views on this question	248
7. The view of the <i>Essay</i> : its indebtedness to Newton and More	250
8. The nature of matter	254
9. The possibility of a science of nature: Locke and Glanville	258
10. Locke and Boyle	260
11. Conclusion	265

CHAPTER XI

LOCKE AND LEIBNIZ

1. Relation of the <i>Nouveaux Essais</i> to the <i>Essay</i>	267
2. Leibniz's early reflections on the <i>Essay</i>	268
3. His ideal of rational knowledge	269
4. Clearness, distinctness and adequacy of ideas	271

SECT.	PAGE
5. Truths of reason and truths of fact	273
6. Connection of Leibniz's logic with his metaphysics	275
7. The monadology and knowledge	276
8. His metaphysics necessitates an extended conception of mental function	276
9. Locke's psychological difficulties from his adherence to the Cartesian conception of mental function	277
10. Leibniz's use of the conception of sub-consciousness	278
11. His defence of innate principles and ideas	280
12. Are all ideas innate?	281
13. Leibniz's attempts to distinguish a special class of innate ideas or principles	
(a) Clear and distinct ideas innate	281
(b) Ideas involved in knowledge of self innate	282
(c) Universal and necessary truths innate	283
(d) Fundamental principles innate	283
14. Locke's simple ideas of Sensation declared to be complex	286
15. Leibniz's general view of Locke's procedure in Book II	288
16. His difficulties in connection with our spacial ideas	289
17. His treatment of the idea of substance compared with that of Locke	291
18. His view of relations	292

CHAPTER XII

LOCKE AND LEIBNIZ (*continued*)

1. The nature of knowledge: extent of agreement between Locke and Leibniz	294
2. For Leibniz the primary truths of reason are identical propositions	295
3. His rejection of Locke's knowledge of relations	296
4. His view of arithmetic and geometry	297
5. Demonstration in other subjects	298
6. Locke's conception of knowledge declared to be too stringent	300
7. Leibniz's attempt to represent the varieties of knowledge as continuous	301
8. His two kinds of truths compared with Locke's two kinds of instructive propositions	302
9. His attempt to mediate between truths of reason and truths of fact	303
10. His view of the relation between the mathematical and natural sciences	305
11. Value of Leibniz's criticism of the <i>Essay</i>	307

CHAPTER XIII

LOCKE AND KANT

SECT.	PAGE
1. Locke and Kant both aim at an immanent criticism of knowledge, but are inconsistent	310
2. Similarity in their general conceptions of the problem and in the resulting difficulties	312
3. Exemplified by their views of the reality of mind	314
4. Locke's anticipation of the distinctions involved in the question, 'how are synthetic <i>a priori</i> judgments possible?'	316
5. A comparison of their treatment of non-rational knowledge	318
6. The reference to experience in their general theories of knowledge.	320
7. Locke's theory of universal and instructive propositions	321
8. His defective view of the nature of the universal and its relation to experience	321
9. How far qualified by him	323
10. How his original position needs to be corrected	325
11. Kant's conception of transcendental logic	326
12. His failure to unite the universal and the particular factors of experience	327
13. A comparison of Locke and Kant in this respect	327
14. Their treatment of the categories compared	328
15. Conclusion	334
INDEX	335
