

CONTENTS

Preface	9
-------------------	---

Part I

PRO METHODOLOGY OF SCIENCE

1. On the Concept 'Methodology of Science'	15
Preliminary Note on the Notions	15
Relationship between Logic, Methodology and Philosophy of Science	19
Basic Relations of Methodology with Logic and Philosophy of Science	27
2. Problems of Methodology	30
Various Conceptions of Methodology	30
Problems of Methodology of Science	37
Methods and Approaches	41
The Relevance of Methodology	45
3. About Philosophical Methodology	49
Approach to the Problem	49
Science and Methodology	50
Philosophy as Methodology	52
Contemporary Philosophies of Science	58
Materialistic and Dialectical Methodology	63
4. Patterns of Interaction between Scientific Theories and Methodology of Science	70
Possible Relations between Scientific Theories and Methodological Conceptions	70
Historical Patterns of Various Interactions between Scientific Theories and Methodologies	71
Concerning the Sequence of Situations (Positions)	74
Lessons from History	77

Part II

HEURISTICS

5. Approaches to Heuristics	81
Introductory Note	81
Psychocentric Trend in Problem-Solving	83
Logocentric Trend	87
The Divergent-Convergent Approach	94
Computers and Problem-Solving	97

6. A Set of Heuristics	103
Univalent and Polyvalent Heuristics	105
Other Heuristics	106
Reduction of the Set of Possible Heuristics. Prospective Heuristic Groups	105
7. Methodologies Corresponding to Definite Scientific Situations	110
The Strife of Methodologies	110
Situations in Science	111
Correlation	113
Situations in Science and Periodization of History of Science	115

Part III

METHODOLOGICAL PROBLEMS OF SCIENTIFIC THEORIES

8. On the Plurality of Scientific Theories	123
Various Conceptions of the Uniqueness of Scientific Theories	124
Conceptions of the Plurality of Theories	125
Relevant Conceptions	126
9. Hypothetico-Deductive Theories in Physics	129
The Dilemma: Physical Theories Are or Are Not Hypothetico-Deductive	130
From an Inductive to a Hypothetico-Deductive Conception of Physical Theories	130
Concerning the Hypothetico-Deductive View	133
There Are No Hypothetico-Deductive Theories	136
Classification of the Physical Theories and Hypothetico-Deductive Theories	138
Classification of the Physical Theories	138
Classification of the Physical Theories according to the Character of the Hypotheses	141
Classification of the Physical Theories according to the Reliability of the Hypotheses	143
10. Change and Continuity of the Hypotheses in the Transition from Pre-relativistic to Relativistic Physics	147
On the Problem	147
What Classes of Hypotheses May Be Distinguished in Physics?	149
Which Hypotheses Characterize Classical Physics?	150
Which Are the Basic Hypotheses of Special Relativity (SR)?	151
Which Are the Essential Changes in the Basic Hypotheses of Physics Brought about by SR?	153
Which Hypotheses Have a Mainly Heuristic and Which a Mainly Logical Function?	156
What is the Hypothetical Basis of General Relativity?	157
What Conclusions Can Be Drawn about the Dynamics of Physical Theories?	160
11. Determinism and Causality in Physics	164
The Problem	164
The Range of Deterministic Conceptions	167
The Possibility of Changing Physical Determinism	169

Change and Replacement of a Given Conception	172
Indeterminism	174
Determinism and Indeterminism	176
Determinism in Physics. Varieties of Physical Determinism	180
Description of Motion	181
Information Regarding the State of a System	182
A Set of Conceptions of Physical Determinism	183
Comparison with Existing Conceptions	185
Causality Conceptions in Physics	187
Main Concepts of Physical Causality	187
Open Problems	191

Part IV

THE HISTORICAL PERSPECTIVE

12. Models of the Growth of Science	197
Problems and Basic Contemporary Conceptions of the Development of Science	197
Conceptions of the Various Aspects of Scientific Development	199
Research Cycles	205
About the Global Development of Science	207
13. Dominants of Scientific Research and History of Science	210
Concerning the Problem	210
Conceptions on the Topics	212
On the So-Called Dominants in Science	213
14. The Sequence of Scientific Revolutions and the Amount of Scientific Publications	223
Scientific Revolutions (SR)	224
The Sequence of SR	226
The Flow of Scientific Publications	229
Correlation Between the Number of Scientific Revolutions and the Flow of Scientific Publications	231
15. The Impact of Philosophical Ideas on Natural Science	235
On the Origin of Scientific Materialism	236
Aristotelism versus Platonism	236
Revenge of Platonism	237
Transition from Platonism to Scientific Materialism	238
Stable Forms of Relationships of Philosophical Doctrines	240
Confrontation of Scientific Trends and Development of Science	245
16. Proliferation and Synthesis of Physical Theories	250
Proliferation of Physical Theories	251
Accomplished Theories	251
Derivative Theories	252
Classification of Physical Theories	252
Alternative Theories	254
Synthesis of Physical Theories	256
The Link between the Physical Concepts	257
General Physical Principles. The Correspondence Principle	259
Synthesis of Theories	261

SUPPLEMENTS

1. Physics and Heuristics	269
2. Scientific Creativity and the Qualities of the Researcher	278
Kinds of Creativity	278
Levels of Creativity	280
Qualities of the Researchers	280
Concerning the Link Between Creativity and the Qualities of the Researcher	282
3. Dialectical Models in the Domain of Physics	286
Transformation of the Basic Forms of Matter	287
The Atomic Nucleus as a Unity of Opposites	287
Forces of Action and Reaction	288
Principle of Le Chatelier	289
Stars as Unity of Opposites	289
Corpuscular and Wave Manifestations of Microobjects	290
Existence of Opposites	290
Complex Character of the Elementary Particles	291
Concluding Remarks	291
4. Dialectics of Steady-State Processes	293
5. On the Hypothetico-Deductive Model of Scientific Theories	298
Validity of the Hypothetico-Deductive Model	299
Hypothetical Character of the Theory Components	300
6. Concerning the Classification of Physical Theories	303
Classification of Physical Theories	303
Possible Classifications	304
Classification according to Subject and Approach	305
7. Leonardo and the 17th Century Scientific Revolution	309
8. Comments on Kuhn's Conception on the Growth of Science	312
Attempt at a General Evaluation of Kuhn's Doctrine	312
Criticism of Kuhn's Views	315
Some Comments	318
On the Incommensurability of Superseding Physical Theories	321
Note on the Origin of the Chapters and Supplements	327
