Table of Contents

Preface xi

Acknowledgements xvii

Part 1: Agency in Observation and Experiment 1

Chapter 1: The Procedural Turn
1.1 Agency in observation and experiment 3
1.2 Discovery, reconstruction and justification 4
1.3 The procedural turn 8
1.4 Representing agency 14
1.5 Epistemological individualism 19
1.6 The making of meaning 24

Chapter 2: Action and Interpretation
2.1 Making sense of new experience 29
2.2 The significance of observational anomaly 33
2.3 Making phenomena visible: Biot and Davy 36
2.4 Constructing self-evidence: Biot, Davy, Ampère 41
2.5 Observation and controversy 46
2.6 Davy's electromagnetic practice 47
2.7 How experiments make hypotheses meaningful 52
2.8 Action and interpretation 59
2.9 Spatio-temporal order: construals and frameworks 62
2.10 Disseminating order 66

Chapter 3: Making Perception Possible
3.1 Intentionality and observation 71
3.2 Privacy, intention and meaning 76
3.3 The diarist's dilemma 78
3.4 A social model of observation 80
3.5 The language of observation 85
3.6 Modelling phenomena 88

3.7 Realism about language 89
3.8 Are there introducing events? 91

Chapter 4: Making Curves
4.1 Introduction 95
4.2 Contexts of construction 98
4.3 Magnetic curves 102
4.4 Curves as a procedural framework 107
4.5 Experimenter's space, action and a field concept 111

Chapter 5: Making Circular Motion
5.1 Construals: the construction of new phenomena 115
5.2 Making circles 116
5.3 Articulating possibilities 122
5.4 Making circular motion: the rotation motor 127
5.5 Patterns of discovery 130

Chapter 6: Representing Experimentation
6.1 Agency, propositions and the world 135
6.2 Representing procedures 137
6.3 Putting the phenomena in context: interdependence 141
6.4 Mapping Faraday's manipulations 143
6.5 Eliciting a natural phenomenon 149
6.6 Discovery paths 153
6.7 Choosing and deciding 155
6.8 Observability and skill 158
6.9 Packaging skill 161

Part 2: Making Natural Phenomena 163

Chapter 7: A Realistic Role for Experiment
7.1 Convergence, skill, and correspondence 165
7.2 Packaging phenomena: experiment as argument 169
7.3 Correspondence 177
7.4 The metaphor of approximation 180
7.5 The myth of approximation 182
7.6 Realism without correspondence 186

Chapter 8: The Experimenter's Redress
8.1 Corrigibility in theory and in practice 189
8.2 Morpurgo's search for quarks 193
8.3 Why do thought-experiments work? 203
8.4 The experimenter's regress 209

8.5 The experimenter's redress 214
8.6 Theory, truth and technology 217

Chapter 9: Empiricism in Practice
9.1 Changing meanings: the implications of induction 221
9.2 Discovering a first principle 223
9.3 How experiment articulates analogy 226
9.4 Remaking meaning 229
9.5 Changing the meaning of experimental practice 231
9.6 Questioning quantitative practice 237
9.7 Making a crucial experiment 243
9.8 Epistemology in practice 245

Chapter 10 Experiment and Meaning
10.1 Which comes first, theory or experiment? 249
10.2 Changing meanings: the nature of force 251
10.3 Extending the reach of magnetic curves 252
10.4 Locally convergent practice 255
10.5 Making divergent practices converge 256
10.6 Changing the sensory core of experience 258
10.7 Refining experimental practice 263
10.8 Refining theoretical practice 266
10.9 Experiment and meaning 270
