CONTENTS

Preface 7
Introduction 9

I SOME OLDER VIEWS 13
1. Plato's account 14
2. Some views of Aristotle 18
3. Leibniz's philosophy of mathematics 21
4. Kant: some of his views 25

II MATHEMATICS AS LOGIC: EXPOSITION 32
1. The programme 33
2. The logic of truth-functions 39
3. On the logic of classes 43
4. On the logic of quantification 47
5. On logicist systems 49

III MATHEMATICS AS LOGIC: CRITICISM 52
1. The logicist account of logic 54
2. The logicist conflation of empirical and non-empirical concepts 58
3. The logicist theory of mathematical infinity 62
4. The logicist account of geometry 67

IV MATHEMATICS AS THE SCIENCE OF FORMAL SYSTEMS: EXPOSITION 72
1. The programme 74
2. Finite methods and infinite totalities 77
3. Formal systems and formalizations 84
4. Some results of metamathematics 91

V MATHEMATICS AS THE SCIENCE OF FORMAL SYSTEMS: CRITICISM 98
1. The formalist account of pure mathematics 101
2. The formalist account of applied mathematics 106
3. The concept of actual infinity 111
4. The formalist conception of logic 115

VI MATHEMATICS AS THE ACTIVITY OF INTUITIVE CONSTRUCTIONS: EXPOSITION 119
1. The programme 121
2. Intuitionist mathematics 125
3. Intuitionist logic 131

VII MATHEMATICS AS THE ACTIVITY OF INTUITIVE CONSTRUCTIONS: CRITICISM 135
1. Mathematical theorems as reports on intuitive constructions 135
2. Intuitionism and the logical status of applied mathematics 142
3. The intuitionist conception of mathematical infinity 146
4. Interrelations between formalism and intuitionism 149

VIII THE NATURE OF PURE AND APPLIED MATHEMATICS 156
1. Exact and inexact concepts 159
2. Pure mathematics disconnected from perception 168
3. Mathematical existence-propositions 171
4. The nature of applied mathematics 176
5. Mathematics and philosophy 182

Appendix A. On the classical theory of real numbers 187
Appendix B. Some suggestions for further reading 192
Index 195
