

TABLE OF CONTENTS

PREFACE	ix
ACKNOWLEDGEMENTS	xiii
I: ON SCIENCE	
1. Some remarks on the philosophy of science	1
2. Information and decision-making as tools of philosophy of science	8
3. Method and creativity in science	19
4. Sociology and models of rational behaviour	28
5. Mathematical models and social facts	40
6. Science as a search for information	45
II: ON INFERENCE	
7. Inference or behaviour?	54
8. A note on confirmation of statistical hypotheses	62
9. On some basic patterns of statistical inference	70
10. A method of deciding between N statistical hypotheses	80
11. A pragmatic justification of rules of statistical inference	87
12. On sequential inference	96
13. Interpretations of the maximum likelihood principle	106
III. ON INFORMATION AND DECISION MAKING	
14. Some remarks concerning the criterion of rational decision-making	114
15. The concept of distribution of goods	128
16. The value of perfect information	140

17. Questions and their pragmatic value	154
18. Two concepts of information	157
19. Types of information and their role in the methodology of science	167
20. Information in decision-making. Some logical aspects	177
21. Decision-making and future research. Some theoretical problems	191
22. On formal aspects of distributive justice	200
23. Philosophy and decision-making	210
24. The concept of unreliable information	222
25. On defining information	226
APPENDIX	
26. Rationality as a value	232
INDEX OF NAMES	241
