# Contents

**1. LINEAR ALGEBRA** . . . . . **1**

1. Matrices, Column Vectors, Row Vectors . . . . . 1
2. Systems of Linear Equations. . . . . 18
3. Linear Equations (continued) . . . . . 35
4. The Inverse of a Square Matrix . . . . . 42
5. Geometric Vectors . . . . . 48
6. Abstract Vector Spaces . . . . . 53
7. Linear Transformations . . . . . 58
*8. More Examples of Vector Spaces and Transformations . . . . . 64
9. Linear Independence and Bases . . . . . 70
10. Theorems on Dimension. . . . . 81
11. The Matrix of a Transformation . . . . . 86
*12. Application of Vector Space Ideas to Differential Equations . . . . 98
13. Three-Dimensional Vector Geometry . . . . . 104
14. Further Topics in Vector Geometry. . . . . 114
15. Euclidean Geometry . . . . . 130
16. Abstract Euclidean Vector Spaces . . . . . 142
17. A Survey of Determinants . . . . . 150

**2. DIFFERENTIAL CALCULUS** . . . . . **159**

1. Vector Functions . . . . . 159
2. Limits and Continuity . . . . . 176
3. Partial Derivatives . . . . . 190
4. The Differential . . . . . 196
5. Tangent Lines and Planes . . . . . 212
6. Derivative with Respect to a Vector . . . . . 232
7. The Chain Rule . . . . . 242
8. Inverse Functions . . . . . 259
9. Curvilinear Coordinates . . . . . 272
10. Implicitly Defined Functions . . . . . 288

**3. REAL-VALUED FUNCTIONS** . . . . . **299**

1. Extreme Values . . . . . 299
2. Quadratic Polynomials . . . . . 314
3. Taylor Expansions . . . . . 333
4. Applications of Taylor Expansions to Maxima and Minima . . . . 346

**4. INTEGRAL CALCULUS** . . . . . **355**

1. Iterated Integrals . . . . . 355
2. Multiple Integrals . . . . . 366
3. Change of Variable in Multiple Integrals . . . . . 385
4. Arc Length . . . . . 401
5. Surface Area . . . . . 409
6. Improper Integrals . . . . . 422

**APPENDIX I. THEORY OF DETERMINANTS** . . . . . **435**

1. Properties of Volume and of Orientation . . . . . 435
2. Properties of the Determinant . . . . . 441
3. Uniqueness and Existence of Determinant Functions. . . . . 446
4. Determinants of Linear Transformations and Matrices . . . . . 451
5. Determinants in Euclidean Space . . . . . 456

**APPENDIX II. PROOFS OF CALCULUS THEOREMS** . . . . . **459**

1. Introduction . . . . . 459
2. Equivalence of Norms . . . . . 460
3. Proof of the Inverse Function Theorem . . . . . 463
4. Existence of the Riemann Integral. . . . . 470
5. The Change-of-Variable Formula for Integrals . . . . . 475

**INDEX** . . . . . **481**
