PART I

THE CLASSICAL LOGIC

CHAPTER	PAGE
I. THE NATURE OF LOGIC	I
(1) Logic as the science of structure. (2) Argument. (3) Formal character of logic.	
II. PROPOSITIONS	10
(1) Structural elements of argument. (2) Types of propositions. (3) Elements of propositions. (4) Logi- cal form of propositions. (5) Symbolizing of proposi- tions. (6) Summary.	
III. CLASSES	26
(1) Nature of classes. (2) Distribution of terms and the null class. (3) Symbolizing of classes. (4) Diagram- ming of classes. (5) Summary.	
IV. IMPLICATIONS OF A SIMPLE PROPOSITION	40
(1) The so-called laws of thought. (2) The traditional square of opposition. (3) Conversion and obversion. (4) Immediate inference and the null class. (5) Symbol- ization of immediate inferences. (6) Summary.	
V. THE CATEGORICAL SYLLOGISM	64
(1) The syllogism as a type of argument. (2) Con- stituents of the syllogism. (3) Moods and figures of the syllogism. (4) Valid moods of the syllogism and the traditional rules. (5) Traditional principle of syllogism and reduction to first figure. (6) The two types of cate- gorical syllogisms. (7) The inconsistent triad (antilo- gism). (8) Venn diagrams and the syllogism. (9) En- thymeme, sorites, and epicheirema. (10) Summary.	
VI. INFERENCES INVOLVING COMPOUND PROPOSITIONS	103
(1) Inference as dependent upon relations. (2) The implicative proposition and its implications. (3) Im-	

CHAPTER	PAGE
plications of disjunctive propositions. (4) The dilemma. (5) Equivalences among compound propositions. (6) Summary.	
VII. RELATIONS	121
(1) Singular propositions and relations. (2) Relations. (3) Summary.	
VIII. FALLACIES	130
(1) Fallacies of clearness. (2) Fallacies of relevance. (3) Strictly formal fallacies. (4) Summary.	

PART II

MODERN SYMBOLIC LOGIC

IX. THE IDEA OF DEDUCTIVE SYSTEMS	141
(1) Deduction and exposition. (2) Exposition and deduction of logic. (3) Geometry as a deductive system. (4) The analysis of deductive systems. (5) Summary.	
X. ABSTRACT DEDUCTIVE SYSTEMS	165
(1) A pitfall of deduction. (2) Symbols as abbreviations. (3) Symbols as structures. (4) Summary.	
XI. THE CALCULUS OF CLASSES	186
(1) Introductory. (2) Classes in extension. (3) Postulates for the calculus. (4) Deductions from the postulates. (5) The application to the classical logic. (6) Further theorems of the calculus. (7) Another interpretation of the calculus. (8) Summary.	
XII. THE CALCULUS OF PROPOSITIONS	218
(1) The need for a calculus. (2) Propositions in extension. (3) The system of material implication. (4) The central position of the calculus of propositions. (5) Summary.	

PART III

SCIENTIFIC METHODOLOGY

XIII. GENERAL NATURE OF INDUCTION	241
(1) Deduction and induction. (2) The aims of science. (3) The scientist's articles of faith. (4) The problem

xiii

CHAPTER	PAGE
and main divisions of inductive logic. (5) The method of hypothesis. (6) Criteria and types of hypotheses. (7) Summary.	
XIV. DESCRIPTION	276
(1) Description in science. (2) General character of description. (3) Classification. (4) Rules of useful classification and division. (5) Definition. (6) The quest for generality. (7) Summary.	
XV. EXPLANATION	306
(1) General character of explanation. (2) Causation. (3) Experiment and Mill's Methods. (4) Combination of deduction and induction in scientific method. (5) Explanation and description. (6) Summary.	
XVI. PROBABILITY	334
(1) Place of probability in induction. (2) Calculation of probabilities. (3) General nature of probability. (4) Statistical methods of analysis. (5) Summary.
