CONTENTS

CHAPTER I. GENERAL BACKGROUND IN LOGIC	1
1. Introduction	1
2. Formal Languages	3
3. Universally Valid Statements	8
4. Gödel Completeness Theorem	11
5. The Löwenheim-Skolem Theorem	17
6. Examples of Formal Systems	20
7. Primitive Recursive Functions	26
8. General Recursive Functions	32
9. Gödel Incompleteness Theorem	39
10. Generalized Incompleteness Theorem	45
11. Further Results in Recursive Functions	46
 CHAPTER II. ZERMELO-FRAENKEL SET THEORY	 50
1. Axioms	50
2. Discussion of the Axioms	54
3. Ordinal Numbers	56
4. Cardinal Numbers	65
5. The Axiom of Regularity	68
6. The System of Gödel-Bernays	73
7. Higher Axioms and Models for Set Theory	78
8. Löwenheim-Skolem Theorem Revisited	82
 CHAPTER III. THE CONSISTENCY OF THE CONTINUUM HYPOTHESIS AND THE AXIOM OF CHOICE	 85
1. Introduction	85
2. Proof of Theorem 1	89
3. Absoluteness	92
4. Proof of AC and GCH in L	95
5. Relations with GB	99
6. The Minimal Model	104
 CHAPTER IV. THE INDEPENDENCE OF THE CONTINUUM HYPOTHESIS AND THE AXIOM OF CHOICE	 107
1. Introduction	107
2. Intuitive Motivation	109
3. The Forcing Concept	113
4. The Main Lemmas	118
