

CONTENTS

1.	Purpose and Language of the Book	page 1
1.1.	<i>Purpose of Book</i>	1
1.2.	<i>Language of Book</i>	1
2.	Aristotle's Syllogistic	3
2.1.	<i>Mathematical Logic Produced by Four Lines of Thought</i>	3
2.2.	<i>Aristotle's Work on Logic</i>	3
2.3.	<i>Reasoning, Implication and Validity</i>	4
2.4.	<i>General Statements</i>	5
2.5.	<i>Aristotle's Syllogistic</i>	6
2.6.	<i>The Use of Variables by Aristotle</i>	8
2.7.	<i>Aristotle's Errors</i>	10
2.8.	<i>The Megarian and Stoic Logic of Statement Connections</i>	12
3.	The Idea of a Complete, Automatic Language for Reasoning	14
3.1.	<i>Lull's 'Ars Magna'</i>	14
3.2.	<i>Dalgarno's and Wilkins's Languages</i>	15
3.3.	<i>Descartes' Idea of a General Language</i>	18
3.4.	<i>Leibniz's Idea of a Mathematics of Thought</i>	19
3.5.	<i>Leibniz's Errors</i>	20

Contents

4.	Changes in Algebra and Geometry, 1825-1900	page 23
4.1.	<i>Peacock's Algebra</i>	23
4.2.	<i>Equations of the Fifth Degree</i>	25
4.3.	<i>Vector and Matrix Algebra</i>	26
4.4.	<i>Geometries of Euclid and Lobachevsky</i>	28
5.	Consistency and Metamathematics	30
5.1.	<i>Mathematics and Systems of Deductions: Consistency</i>	30
5.2.	<i>Metamathematics</i>	32
6.	Boole's Algebra of Logic	33
6.1.	<i>Boole and the Older Logics of Aristotle and of Hamilton-De Morgan</i>	33
6.2.	<i>Boole the Man</i>	36
6.3.	<i>Boole's 'Mathematical Analysis of Logic'</i>	37
6.4.	<i>Class and Statement Readings of Boole's Algebra</i>	38
6.5.	<i>Boole's 'Laws of Thought'</i>	39
6.6.	<i>Boole's Algebra and Number Algebra</i>	42
7.	The Algebra of Logic after Boole: Jevons, Peirce and Schroeder	44
7.1.	<i>Later Developments of Boole's Algebra</i>	44
7.2.	<i>The Work of Jevons</i>	44
7.3.	<i>Comparison of Boole's and Jevons's Systems</i>	46

Contents

7.4.	<i>Peirce's Points of Agreement with Boole and Jevons</i>	page 48
7.5.	<i>Peirce's Use of the 'A Part of' Relation</i>	49
7.6.	<i>Peirce's Theory of Relations</i>	50
7.7.	<i>Peirce's Logic of Statement Connections</i>	52
7.8.	<i>Peirce's Quantifier Logic</i>	55
7.9.	<i>Schroeder's Algebra of Logic</i>	56
7.10.	<i>Whitehead's and Huntington's Work on the Algebra of Logic</i>	58
8.	Frege's Logic	59
8.1.	<i>The Mathematics of Logic and the Logic of Mathematics</i>	59
8.2.	<i>Reasons Why Frege's Writings were Undervalued</i>	60
8.3.	<i>Frege's View of the Relation between Logic and Arithmetic</i>	61
8.4.	<i>Frege on Functions</i>	63
8.5.	<i>Functions as Rules</i>	65
9.	Cantor's Arithmetic of Classes	66
9.1.	<i>Finite and Enumerable Classes</i>	66
9.2.	<i>Cantor's Cardinal Arithmetic</i>	68
9.3.	<i>Cantor's Ordinal Arithmetic</i>	69
9.4.	<i>Burali-Forti's and Russell's Discoveries</i>	69
10.	Peano's Logic	73
10.1.	<i>Implication and Mathematics</i>	73
10.2.	<i>Peano's Purpose in his Logic</i>	74

Contents

10.3.	<i>Some of Peano's Discoveries and Inventions</i>	page 75
10.4.	<i>Peano's School of Metamathematics</i>	76
11.	Whitehead and Russell's ' <i>Principia Mathematica</i> '	77
11.1.	<i>Short Account of the Three Parts of 'Principia Mathematica'</i>	77
11.2.	<i>Relation between Russell's 'Principles' and 'Principia Mathematica'</i>	78
11.3.	<i>Russell's Way of Getting Consistency in Class Theory</i>	78
12.	Mathematical Logic after ' <i>Principia Mathematica</i> ': Hilbert's Metamathematics	79
12.1.	<i>The Growth of Logic after 'Principia Mathematica'</i>	79
12.2.	<i>The Structure of an Axiom System</i>	80
12.3.	<i>Post's, Hilbert and Ackermann's, and Goedel's Demonstrations for 'Principia Mathematica' Systems</i>	81
12.4.	<i>Brouwer's Doubts and Hilbert's Metamathematics</i>	82
12.5.	<i>Goedel's Theorem in the Metamathematics of Arithmetic</i>	84
12.6.	<i>The Theory of Recursive Functions</i>	84
