

CONTENTS

Preface

vii

PART ONE. THE LANGUAGE AND APPROACH OF SCIENCE

- Chapter 1 *Science and the Scientific Approach* 3
Science and common sense. Four methods of knowing. Science and its functions. The aims of science, scientific explanation, and theory. Scientific research—a definition. The scientific approach.
- Chapter 2 *Problems and Hypotheses* 18
Problems. Hypotheses. The importance of problems and hypotheses. Virtues of problems and hypotheses. Problems, values, and definitions. Generality and specificity of problems and hypotheses. Concluding remarks—the special power of hypotheses. Study suggestions.
- Chapter 3 *Constructs, Variables, and Definitions* 31
Concepts and constructs. Variables. Constitutive and operational definitions of constructs and variables. Types of variables. Constructs, observables, and intervening variables. Study suggestions.
- Chapter 4 *Sampling and Randomness* 51
Sampling and random sampling. Randomness. The principle of randomization. Random assignment. Sample size. Study suggestions.

xiii

PART TWO. SETS, RELATIONS, AND VARIANCE

- | | | |
|-----------|--|----|
| Chapter 5 | <p><i>Sets</i>
 Subsets. Set operations. The universal and empty sets; set negation. Set diagrams. Set operations with more than two sets. Partitions and cross partitions. Levels of discourse. Study suggestions.</p> | 67 |
| Chapter 6 | <p><i>Relations</i>
 Relations as sets of ordered pairs. Determining relations in research. Rules of correspondence and mapping. Functions. Some ways to show relations. Study suggestions.</p> | 80 |
| Chapter 7 | <p><i>Variance</i>
 Computation of means and variances. Kinds of variance. Components of variance. Covariance. Common factor variance.</p> | 93 |

PART THREE. PROBABILITY AND STATISTICAL INFERENCE

- | | | |
|-----------|--|-----|
| Chapter 8 | <p><i>Probability</i>
 Definition of probability. Sample space, sample points, and events. Determining probabilities with coins. An experiment with dice. A compound experiment. Some formal theory. Compound events and their probabilities. Independence, mutual exclusion, and exhaustiveness. Conditional probability. Study suggestions.</p> | 117 |
| Chapter 9 | <p><i>Statistics: Purpose, Approach, and Method</i>
 The basic approach. Definition and purposes of statistics. Statistical significance and the χ^2 test. Levels of statistical significance. Statement of the statistical problem. Binomial statistics. The variance. The law of large numbers. The normal probability curve and the standard deviation. Interpretation of data using the normal probability curve—frequency data. Interpretation of data using the normal probability curve—continuous data.</p> | 147 |

Chapter 10	<i>Statistics: The Standard Error and Testing Hypotheses</i> Examples: differences between means. Examples: correlation coefficients. The general nature of a standard error. A research example. Statistical inference. Study suggestions.	169
Chapter 11	<i>Analysis of Variance: Foundations</i> Variance breakdown: a simple example. Another method of analysis. An example of a statistically significant difference. Computation of one-way analysis of variance. Two research examples. Strength of relations: correlation and the analysis of variance. Components of variance. Study suggestions.	187
Chapter 12	<i>Analysis of Variance: Factorial Analysis</i> Research examples. A simple fictitious example. The meaning of interaction. Factorial analysis of variance with three or more variables. Goals of factorial analysis of variance. Factorial analysis of variance and precision. Some research examples. A further word on interaction. A note of caution. Study suggestions.	213
Chapter 13	<i>Analysis of Variance: Correlated Groups or Subjects</i> Definition of the problem. Extracting variances by subtraction. Applications to educational settings. Study suggestions.	242
Chapter 14	<i>Nonparametric Statistics</i> Parametric and nonparametric statistics. Nonparametric analysis of variance and measures of association. Study suggestions.	257

PART FOUR. DESIGNS OF RESEARCH

Chapter 15	<i>Research Design: Meaning, Purpose, and Principles</i> Purposes of research design. Research design as variance control. Maximization of experimental variance. Control of extraneous variables. Minimization of error variance.	275
------------	--	------------

- Chapter 16 ***General Designs of Research: "Poor" Designs*** **290**
 Experimental and ex post facto approaches. Faulty designs. Characteristics lacking in "poor" research designs.
- Chapter 17 ***General Designs of Research: "Good" Designs*** **301**
 Adequate designs. The notion of the control group. Matching—pro and con. Variants of basic designs. Experimental and nonexperimental research. Study suggestions.
- Chapter 18 ***Research Design and Applications:***
 Randomized Groups **322**
 Simple randomized subjects design. Factorial designs. Evaluation of randomized subjects designs. Study suggestions.
- Chapter 19 ***Research Design and Applications:***
 Correlated Groups **337**
 The general paradigm. Research examples of two-group designs. Multigroup, correlated-groups designs. Factorial correlated-groups designs. Analysis of covariance. A procedural description of analysis of covariance. Research design and analysis: concluding remarks. Study suggestions.

PART FIVE. TYPES OF RESEARCH

- Chapter 20 ***Ex Post Facto Research*** **359**
 Basic difference between experimental research and ex post facto research. Control and ex post facto research. Self-selection and ex post facto research. Large-scale ex post facto research. Small-scale ex post facto research. Testing alternative or "control" hypotheses. Evaluation of ex post facto research. Conclusions. Study suggestions.
- Chapter 21 ***Laboratory Experiments, Field Experiments, and Field Studies*** **375**
 A laboratory experiment: Sherif's studies of group influence on norms. A field experiment: Verplanck's study of the reinforcement of opinion statements. A field study: Newcomb's Bennington College

study. Characteristics and criteria of laboratory experiments, field experiments, and field studies. The field experiment. Field studies.

- Chapter 22 *Survey Research* 392
 A definition of survey research. Types of surveys. The methodology of survey research. Two studies. Applications of survey research to education. Advantages and disadvantages of survey research.

PART SIX. MEASUREMENT

- Chapter 23 *Foundations of Measurement* 411
 Definition of measurement. Measurement and "reality" isomorphism. Properties, constructs, and indicants of objects. Levels of measurement and scaling. Comparisons of scales: practical considerations and statistics.

- Chapter 24 *Reliability* 429
 Definitions of reliability. Theory of reliability. The interpretation of the reliability coefficient. The standard error of the mean and the standard error of measurement. The improvement of reliability. The value of reliability.

- Chapter 25 *Validity* 444
 Types of validity. A variance definition of validity: the variance relation of reliability and validity. The validity and reliability of psychological and educational measurement instruments. Study suggestions.

PART SEVEN. METHODS OF OBSERVATION AND DATA COLLECTION

Introduction

- Chapter 26 *Interviews and Interview Schedules* 467
 Interviews and schedules as tools of science. The interview schedule. The value of interviews and interview schedules. Study suggestions.

Chapter 27	<i>Objective Tests and Scales</i>	479
	Tests and scales: definitions. Types of objective measures. Choice and construction of objective measures. Types of objective scales and items. Evaluation of objective tests and scales. Study suggestions.	
Chapter 28	<i>Observations of Behavior</i>	503
	Problems of observation of behavior. Characteristics of observations. Rating scales. Examples of observation systems. Assessment of behavioral observation. Study suggestions.	
Chapter 29	<i>Projective Methods</i>	525
	A classification of projective measures. Projective techniques and behavioral research: an assessment.	
Chapter 30	<i>Available Materials and Content Analysis</i>	539
	Uses of available materials. Content analysis. Research examples of content analysis. Some aspects of method in content analysis. Use of content analysis and available materials in psychological and educational research.	
Chapter 31	<i>Sociometry</i>	554
	Sociometry: a definition. Methods of sociometric analysis. Some research applications of sociometry. Sociometric measurement in social scientific and educational research. Study suggestions.	
Chapter 32	<i>The Semantic Differential</i>	564
	The construction and use of the semantic differential. Format and administration of the semantic differential. Analysis of semantic differential data. Some research uses of the semantic differential. The semantic differential in behavioral research.	
Chapter 33	<i>Q Methodology</i>	581
	Theory; structured and unstructured Q sorts; analysis of variance. Factor analysis and factor arrays in Q methodology. Strengths and weaknesses of Q methodology. Q methodology in social scientific and educational research. Study suggestions.	

**PART EIGHT. ANALYSIS AND
INTERPRETATION**

Chapter 34	<i>Principles of Analysis and Interpretation</i>	603
	Definitions. Frequencies and continuous measures. The five rules of categorization. Statistical presentation and analysis. Indices. The interpretation of research data. Study suggestions.	
Chapter 35	<i>The Analysis of Crossbreaks</i>	624
	Crossbreaks: definitions and purpose. Simple crossbreaks and rules for crossbreak construction. Types of crossbreaks and tables. Crossbreaks, relations, ordered pairs, graphing. Study suggestions.	
Chapter 36	<i>Factor Analysis</i>	650
	A hypothetical example. Factor matrices and factor loadings. Some factor theory. Graphical representation of factors and factor loadings. Methods of factor analysis. Research examples. Factor analysis and scientific psychological and educational research. Study suggestions.	
Appendixes	<i>A. The Research Report</i>	690
	<i>B. Historical and Methodological Research</i>	698
	<i>C. The Electronic Digital Computer and Behavioral Research</i>	703
Indexes	<i>Authors Cited</i>	713
	<i>Subject Matter</i>	717
