Translator's Introduction / xv

PART I THE CRISIS OF THE SCIENCES AS EXPRESSION OF THE RADICAL LIFE-CRISIS OF EUROPEAN HUMANITY

- § 1. *Is there, in view of their constant successes, really a crisis of the sciences?* / 3
- § 2. *The positivistic reduction of the idea of science to mere factual science. The "crisis" of science as the loss of its meaning for life.* / 5
- § 3. *The founding of the autonomy of European humanity through the new formulation of the idea of philosophy in the Renaissance.* / 7
- § 4. *The failure of the new science after its initial success; the unclarified motive for this failure.* / 10
- § 5. *The ideal of universal philosophy and the process of its inner dissolution.* / 11
- § 6. *The history of modern philosophy as a struggle for the meaning of man.* / 14
- § 7. *The project of the investigations of this work.* / 16

PART II CLARIFICATION OF THE ORIGIN OF THE MODERN OPPOSITION BETWEEN PHYSICALISTIC OBJECTIVISM AND TRANSCENDENTAL SUBJECTIVISM

- § 8. *The origin of the new idea of the universality of science in the reshaping of mathematics.* / 21
- § 9. *Galileo's mathematization of nature.* / 23
 - a. *"Pure geometry."* / 24
 - b. *The basic notion of Galilean physics: nature as a mathematical universe.* / 28
 - c. *The problem of the mathematizability of the "plena."* / 34
 - d. *The motivation of Galileo's conception of nature.* / 37

- e. The verificational character of natural science's fundamental hypothesis. / 41
- f. The problem of the sense of natural-scientific "formulae." / 43
- g. The emptying of the meaning of mathematical natural science through "technization." / 46
- h. The life-world as the forgotten meaning-fundament of natural science. / 48
- i. Portentous misunderstandings resulting from lack of clarity about the meaning of mathematization. / 53
- k. Fundamental significance of the problem of the origin of mathematical natural science. / 56
- l. Characterization of the method of our exposition. / 57
- § 10. *The origin of dualism in the prevailing exemplary role of natural science. The rationality of the world more geometrico.* / 60
- § 11. *Dualism as the reason for the incomprehensibility of the problems of reason; as presupposition for the specialization of the sciences; as the foundation of naturalistic psychology.* / 61
- § 12. *Over-all characterization of modern physicalistic rationalism.* / 65
- § 13. *The first difficulties of physicalistic naturalism in psychology: the incomprehensibility of functioning subjectivity.* / 67
- § 14. *Precursory characterization of objectivism and transcendentalism. The struggle between these two ideas as the sense of modern spiritual history.* / 68
- § 15. *Reflection on the method of our historical manner of investigation.* / 70
- § 16. *Descartes as the primal founder not only of the modern idea of objectivistic rationalism but also of the transcendental motif which explodes it.* / 73
- § 17. *Descartes's return to the ego cogito. Exposition of the sense of the Cartesian epochē.* / 75
- § 18. *Descartes's misinterpretation of himself. The psychologistic falsification of the pure ego attained through the epochē.* / 78
- § 19. *Descartes's obtrusive interest in objectivism as the reason for his self-misinterpretation.* / 81
- § 20. *"Intentionality" in Descartes.* / 82
- § 21. *Descartes as the starting point of two lines of development, rationalism and empiricism.* / 83
- § 22. *Locke's naturalistic-epistemological psychology.* / 84
- § 23. *Berkeley. David Hume's psychology as fictionalistic theory of knowledge: the "bankruptcy" of philosophy and science.* / 86
- § 24. *The genuine philosophical motif hidden in the absurdity of Hume's skepticism: the shaking of objectivism.* / 88
- § 25. *The "transcendental" motif in rationalism: Kant's conception of a transcendental philosophy.* / 91

- § 26. *Preliminary discussion of the concept of the "transcendental" which guides us here.* / 97
- § 27. *The philosophy of Kant and his followers seen from the perspective of our guiding concept of the "transcendental." The task of taking a critical position.* / 98

PART III THE CLARIFICATION OF THE TRANSCENDENTAL PROBLEM AND THE RELATED FUNCTION OF PSYCHOLOGY

A. The Way into Phenomenological Transcendental Philosophy by Inquiring back from the Pregiven Life-World

- § 28. *Kant's unexpressed "presupposition": the surrounding world of life, taken for granted as valid.* / 103
- § 29. *The life-world can be disclosed as a realm of subjective phenomena which have remained "anonymous."* / 111
- § 30. *The lack of an intuitive exhibiting method as the reason for Kant's mythical constructions.* / 114
- § 31. *Kant and the inadequacy of the psychology of his day. The opaqueness of the distinction between transcendental subjectivity and soul.* / 116
- § 32. *The possibility of a hidden truth in Kant's transcendental philosophy: the problem of a "new dimension." The antagonism between the "life of the plane" and the "life of depth."* / 118
- § 33. *The problem of the "life-world" as a partial problem within the general problem of objective science.* / 121
- § 34. *Exposition of the problem of a science of the life-world.* / 123
- a. *The difference between objective science and science in general.* / 123
- b. *The use of subjective-relative experiences for the objective sciences, and the science of them.* / 125
- c. *Is the subjective-relative an object for psychology?* / 126
- d. *The life-world as universe of what is intuitable in principle; the "objective-true" world as in principle nonintuitable "logical" substruction.* / 127
- e. *The objective sciences as subjective constructs—those of a particular praxis, namely, the theoretical-logical, which itself belongs to the full concreteness of the life-world.* / 129
- f. *The problem of the life-world not as a partial problem but rather as a universal problem for philosophy.* / 132
- § 35. *Analysis of the transcendental epochē. First step: The epochē of objective science.* / 135
- § 36. *How can the life-world, after the epochē of the objective sciences, become the subject matter of a science? The distinction in principle between the objective-logical a priori and the a priori of the life-world.* / 137
- § 37. *The formal and most general structures of the life-world: thing*

- and world on the one side, thing-consciousness on the other.*
/ 142
- § 38. *The two possible fundamental ways of making the life-world thematic: the naïve and natural straightforward attitude and the idea of a consistently reflective attitude toward the "how" of the subjective manner of givenness of life-world and life-world objects.* / 143
- § 39. *The peculiar character of the transcendental epochē as a total change of the natural attitude of life.* / 148
- § 40. *The difficulties surrounding the genuine sense of performing the total epochē. The temptation to misconstrue it as a withholding of all individual validities, carried out step by step.* / 148
- § 41. *The genuine transcendental epochē makes possible the "transcendental reduction"—the discovery and investigation of the transcendental correlation between world and world-consciousness.* / 151
- § 42. *The task of concretely plotting ways in which the transcendental reduction can actually be carried out.* / 152
- § 43. *Characterization of a new way to the reduction, as contrasted with the "Cartesian way."* / 154
- § 44. *The life-world as subject matter for a theoretical interest determined by a universal epochē in respect to the actuality of the things of the life-world.* / 155
- § 45. *Beginnings of a concrete exposition of what is given in sense-intuition purely as such.* / 157
- § 46. *The universal a priori of correlation.* / 159
- § 47. *Indication of further directions of inquiry: the basic subjective phenomena of kinesthesia, alteration of validity, horizon-consciousness, and the communalization of experience.* / 161
- § 48. *Anything that is—whatever its meaning and to whatever region it belongs—is an index of a subjective system of correlations.* / 165
- § 49. *Preliminary concept of transcendental constitution as "original formation of meaning." The restricted character of the exemplary analyses carried out so far; an indication of further horizons of exposition.* / 167
- § 50. *First ordering of all working problems under the headings ego-cogito-cogitatum.* / 170
- § 51. *The task of an "ontology of the life-world."* / 173
- § 52. *The emergence of paradoxical enigmas. The necessity of new radical reflections.* / 174
- § 53. *The paradox of human subjectivity: being a subject for the world and at the same time being an object in the world.*
/ 178

- § 54. *The resolution of the paradox:* / 182
 a. We as human beings, and we as ultimately functioning-accomplishing subjects. / 182
 b. As primal ego, I constitute my horizon of transcendental others as cosubjects within the transcendental intersubjectivity which constitutes the world. / 184
- § 55. *The correction in principle of our first application of the epochē by reducing it to the absolutely unique, ultimately functioning ego.* / 186

PART III B. The Way into Phenomenological Transcendental Philosophy from Psychology

- § 56. *Characterization of the philosophical development after Kant from the perspective of the struggle between physicalistic objectivism and the constantly reemerging "transcendental motif."* / 191
- § 57. *The fateful separation of transcendental philosophy and psychology.* / 198
- § 58. *The alliance and the difference between psychology and transcendental philosophy. Psychology as the decisive field.* / 203
- § 59. *Analysis of the reorientation from the psychological attitude into the transcendental attitude. Psychology "before" and "after" the phenomenological reduction. (The problem of "flowing in.")* / 208
- § 60. *The reason for the failure of psychology: dualistic and physicalistic presuppositions.* / 211
- § 61. *Psychology in the tension between the (objectivistic-philosophical) idea of science and empirical procedure: the incompatibility of the two directions of psychological inquiry (the psychophysical and that of "psychology based on inner experience").* / 213
- § 62. *Preliminary discussion of the absurdity of giving equal status in principle to souls and bodies as realities; indication of the difference in principle between the temporality, the causality, and the individuation of natural things and those of souls.* / 215
- § 63. *The questionable character of the concepts of "outer" and "inner" experience. Why has the experience of the bodily thing in the life-world, as the experience of something "merely subjective," not previously been included in the subject matter of psychology?* / 219
- § 64. *Cartesian dualism as the reason for the parallelization. Only the formal and most general features of the schema "descriptive vs. explanatory science" are justified.* / 221
- § 65. *Testing the legitimacy of an empirically grounded dualism by familiarizing oneself with the factual procedure of the psychologist and the physiologist.* / 224
- § 66. *The world of common experience: its set of regional types and*

- the possible universal abstractions within it: "nature" as correlate of a universal abstraction; the problem of "complementary abstractions."* / 226
- § 67. *The dualism of the abstractions grounded in experience. The continuing historical influence of the empiricist approach (from Hobbes to Wundt). Critique of data-empiricism.* / 230
- § 68. *The task of a pure explication of consciousness as such: the universal problem of intentionality. (Brentano's attempt at a reform of psychology.)* / 233
- § 69. *The basic psychological method of "phenomenological-psychological reduction" (first characterization: [1] intentional relatedness and the epochē; [2] levels of descriptive psychology; [3] establishing the "disinterested spectator").* / 235
- § 70. *The difficulties of psychological "abstraction." (The paradox of the "intentional object"; the intentional primal phenomenon of "sense.")* / 241
- § 71. *The danger of misunderstanding the "universality" of the phenomenological-psychological epochē. The decisive significance of the correct understanding.* / 244
- § 72. *The relation of transcendental psychology to transcendental phenomenology as the proper access to pure self-knowledge. Definitive removal of the objectivistic ideal from the science of the soul.* / 257

APPENDIXES

- A. The Vienna Lecture
- I. Philosophy and the Crisis of European Humanity / 269
- B. Supplementary Texts
- II. Idealization and the Science of Reality—The Mathematization of Nature / 301
- III. The Attitude of Natural Science and the Attitude of Humanistic Science. Naturalism, Dualism, and Psychophysical Psychology / 315
- IV. Philosophy as Mankind's Self-Reflection; the Self-Realization of Reason / 335
- V. [Objectivity and the World of Experience] / 343
- VI. [The Origin of Geometry] / 353
- VII. [The Life-World and the World of Science] / 379
- VIII. Fink's Appendix on the Problem of the "Unconscious" / 385
- IX. Denial of Scientific Philosophy. Necessity of Reflection. The Reflection [Must Be] Historical. *How Is History Required?* / 389
- X. Fink's Outline for the Continuation of the *Crisis* / 397
- Index* / 401
