FOREWORD	ix
INTRODUCTION	xi

I. Science and the Scientist

The Nature of Scientific Activity

The Method of Scientific Investigation <i>T. H. Huxley</i>	2
The Imperfections of Science <i>Warren Weaver</i>	11
In the Name of Science <i>Martin Gardner</i>	31

Observation, Hypothesis, Experiment

How Agassiz Taught Me to See <i>Nathaniel Shaler</i>	43
The Courtship of the Scorpion <i>J. Henri Fabre</i>	47
Mysterious Craters of the Carolina Coast <i>Douglas Johnson</i>	64
Hypothesis <i>W. I. B. Beveridge</i>	86
The Overthrow of the Phlogiston Theory <i>James B. Conant</i>	88
Examples of Experimental Physiological Investigation <i>Claude Bernard</i>	107

Discovery

Chance <i>W. I. B. Beveridge</i>	131
Chain Discoveries <i>René Taton</i>	148
The Act of Discovery <i>John R. Baker</i>	158
Imagination Creatrix <i>John Livingston Lowes</i>	170
The Night Prowler <i>Otto Loewi</i>	176
The Miracle That Saved the World <i>William L. Laurence</i>	179

II. Science and the World Around Us

The Fourth Adjustment *Harlow Shapley* 187

Science and the Education of Free Men
Edmund W. Sinnott 196

Science and Sensibility *Jacob Bronowski* 207

A Scientific Society — The Beginnings
Glenn T. Seaborg 218

Science As a Means of International
Understanding *Werner Karl Heisenberg* 233

Religion and Science *Alfred North Whitehead* 245
