

CONTENTS

1. THE VELOCITY OF LIGHT

Mersenne's Measurement of the Speed of Sound	11
Galileo's Attempt to Measure the Velocity of Light	12
Roemer's Astronomical Method	13
Bradley's Telescope Method	15
Fizeau's Terrestrial Method	19
Michelson's Precise Measurement	21
Other Properties of Light Waves	23

2. THE GREAT DILEMMA

The Stationary Ether Postulated	26
Further Confirmation of the Ether	27
An Expected Ether Effect	29
Fresnel's Ether Drag	30
The Michelson-Morley Experiment	32
Possible Explanations for Michelson and Morley's Results	37
The Great Dilemma	42

3. THE SPECIAL THEORY OF RELATIVITY

Difference between the Special Theory and the General Theory	43
The Two Postulates of the Special Theory	44
Deductions from the Postulates	51
Contraction of Length	54
Mass Increase with Velocity	57
Addition of Velocities	59
The Maximum Possible Velocity	61
Equivalence of Mass and Energy	63
Time in the Special Theory	65

CONTENTS

4. EXPERIMENTAL PROOF OF THE SPECIAL THEORY

Mass Increase with Velocity	74
Radioactive Particles	74
Sommerfeld's Theory of Atomic Orbits	75
Atomic Accelerators	79
Addition of Velocities	80
Fizeau's Experiment	80
Equivalence of Mass and Energy	82
Cockroft and Walton's Experiment	82
Atomic and Hydrogen Bombs	84
Energy Production in the Sun and Stars	87
The Atomic Age	89
Time	89
Ives' Experiment	89

5. THE GENERAL THEORY AND EXPERIMENTAL PROOF

The Principle of Equivalence	92
Newton's Law of Universal Gravitation and Einstein's Theory of Gravitation —Rotation of Mercury's Orbit	96
Effect of a Gravitational Mass on a Light Beam —Weighing a Beam of Light	101
Effect of a Gravitational Mass on Time —Slowing Down of Atomic Clocks on the Sun and Stars	106

6. RELATIVITY AND THE NATURE OF THE UNIVERSE

Types of Universes	109
The General Theory and Our Universe	113
The Expanding Universe	118

7. THE UNIFIED FIELD THEORY 120

INDEX	125
