Contents

PART I
INTRODUCTION

1. Introduction to quantitative analysis **3**

Business decisions. Abstraction. Model building. Solutions. Errors. Model-building techniques. Decisions and probability.

PART II
PROBABILITY AND STATISTICS

2. A survey of probability concepts **21**

Objective and subjective probabilities. Basic statements of probability. Mutually exclusive events. Independent events. Dependent events. Conditional, marginal, and joint probabilities. Revision of probabilities. Random variables. The expected value of a random variable. Sums of random variables. The variance and standard deviation of a random variable. The Bernoulli process and the binomial distribution. The binomial probability distribution. The binomial probability function.

3. Conditional and expected value **56**

Conditional value. The loss table. Expected monetary value. Expected opportunity loss. Expected utility. Expected profit with perfect predictions. Expected value of perfect information. Sensitivity analysis of subjective probabilities. Analysis of decisions under uncertainty. Decision tree for grocer's problem. Decision tree example. Analysis of the decision problem. Developing the decision tree.

PART III
DECISION MAKING

4. Decision theory **93**

The decision problem. Decision criteria. Maximax. Equally likely. Minimax. Maximum likelihood. Expected value decision rule. Linear functions. The product of random variables.

5. Decisions and revision of probabilities 109

The value of imperfect information. Determining probabilities. The value of the survey information.

6. Decision theory and classical statistics 129

Classical statistics. Probability of error. Incorporating economic consequences.

7. The normal probability distribution and the value of information 144

Cumulative mass functions. Cumulative distribution functions. The normal probability distribution. Right and left tails. The standardized normal variable and normal probability tables. Normal prior probabilities and the value of information.

8. Revision of normal probabilities 167

The probability distributions. Revising the prior distribution. Revision of the standard deviation. The posterior normal distribution and decision making.

9. Decision making with normal probabilities 181

The initial situation. The expected posterior distribution. The expected value of sample information. The sampling decisions. Optimum sample size.

10. Utility as a basis for decision making 196

Utility. Measuring utility. The psychological assumptions. Derivation of a utility function for money. Using utility functions. Utility functions and risk preference. Other measures of utility.

11. Game theory 223

Games. Two-person zero-sum games. Mixed strategies: A zero-sum game. Mixed strategies and games against nature. Evaluation of minimax strategy. Nonzero-sum games. Uncertain payoffs.

PART IV
MATHEMATICAL PROGRAMMING

12. Introduction to linear programming 247

Formulation of linear programming problems. A graphic solution. Limitations of linear programming.

13. Linear programming: The simplex method 286

The simplex method.

14. Linear programming: The dual problem and sensitivity analysis 234

Shadow prices. Sensitivity analysis. Parametric programming. Linear programming and game theory. Appendix. Linear programming and game theory.

15. Linear programming: The transportation problem 360

Integer solutions. Degeneracy. Supply not equal to demand. Economic interpretations. Appendix. The transportation problem expressed in conventional equation form.

16. Integer programming and branch and bound procedures 381

Formulation of integer programming problems. Examples of integer formulations. Solution of integer programming problems. Appendix: Branch and bound procedures for combinatorial problems.

PART V
DETERMINISTIC AND PROBABILISTIC MODELS

17. Inventory control and uncertainty: No reordering 423

Fixed demand under certainty. Uncertainty with perfect information. Uncertain demand. A marginal approach. Value of additional information. Cost of ill will. Using a continuous probability distribution.

18. Inventory control with reordering and certain demand 440

Inventory control with known demand. Sensitivity of costs to errors in Q. Quantity discounts. Assuming a continuous flow of product. Demand is known: Backordering is allowed. Appendix 1: Production lot size. Appendix 2: Inventory model with back orders.

19. Inventory control with reordering and uncertain demand 457

The assumptions. The model. Optimal order point—A marginal approach. Total expected cost. Appendix: The determination of the optimum order point and order size. The total annual expected cost.

20. Waiting lines: Queuing theory 473

Experience and queues. Mathematical models of queuing. A single-service facility: Arrivals from an infinite population. The model. Multiple-service facilities. One-service facility: Arrivals from a finite source. Appendix 1: The Poisson process and distribution. The exponential distribution. Appendix 2: Derivation of basic queuing formula.

21. Simulation 498

Simulation and inventory control. Risk analysis. Simulation of complex systems. Appendix: Simulation with continuous probability distribution.

22. PERT (Program Evaluation and Review Technique) 517

Information requirements. Case I: Known activity times. Network diagram. The critical path. Algorithm for critical path. Slack and critical path. Time-cost trade-offs. Case II: Uncertain activity times. Multiple time estimates for uncertain activi'y times. Simulation of PERT networks. Evaluation of PERT.

23. Markov processes 545

Calculation of steady-state probabilities. Characteristics of a Markov process. Use of Markov process in decision problems. Steady-state solution to larger problems. Appendix: Steady-state and transient behavior of a two-state Markov process.

24. Dynamic programming 574

Formalizing the dynamic programming technique. Principle of optimality. Formulation and solution of dynamic programming problems. Dynamic programming under uncertainty. Appendix: The use of dynamic programming in Markov processes.

Appendix of tables 613
