

## CONTENTS

Preface	ix
PSA 1994 Program	xi
Synopsis	xxiii
<b>Part I. Philosophy of Biology</b>	
1. <i>The Selection of Alleles and the Additivity of Variance</i> Sahotra Sarkar, Dibner Institute MIT and McGill University	3
2. <i>Optimization in Evolutionary Ecology</i> Robert C. Richardson, University of Cincinnati	13
3. <i>The Super Bowl and the Ox-Phos Controversy: "Winner-Take-All"</i> <i>Competition in Philosophy of Science</i> Douglas Allchin, Cornell University	22
4. <i>Ecological Explanation and the Population-Growth Thesis</i> Kristin Shrader-Frechette, University of South Florida	34
5. <i>Defending Robustness: the Bacterial Mesosome as a Test Case</i> Sylvia Culp, Western Michigan University	46
<b>Part II. Explanation, Induction, and Linguistic Representation</b>	
6. <i>Explaining Brute Facts</i> Eric Barnes, Southern Methodist University	61
7. <i>Scientific Explanation: From Covering Law to Covering Theory</i> Fritz Rohrlich, Syracuse University	69
8. <i>Why There Can't be a Logic of Induction</i> Stuart S. Glennan, Butler University	78
9. <i>Earman on the Projectibility of Grue</i> Marc Lange, University of California, Los Angeles	87
10. <i>A Representational Reconstruction of Carnap's Quasianalysis</i> Thomas Mormann, Universität München	96
<b>Part III. Spacetime and Related Matters</b>	
11. <i>Locality/Separability: Is This Necessarily a Useful Distinction?</i> James T. Cushing, University of Notre Dame	107
12. <i>Spacetime and Holes</i> Carolyn Brighthouse, Occidental College and University of Southern California	117

13.	<i>Non-Turing Computers and Non-Turing Computability</i> Mark Hogarth, University of Cambridge	126
<b>Part IV. Philosophy of Chemistry</b>		
14.	<i>Spectrometers as Analogues of Nature</i> Daniel Rothbart, George Mason University	141
15.	<i>Ideal Reaction Types and the Reactions of Real Alloys</i> Jeffrey L. Ramsey, Oregon State University	149
16.	<i>Has Chemistry Been at Least Approximately Reduced to Quantum Mechanics?</i> Eric R. Scerri, London School of Economics	160
<b>Part V. Realism and its Guises</b>		
17.	<i>Could Theoretical Entities Save Realism?</i> Mohamed Elsamahi, The University of Calgary	173
18.	<i>Realism, Convergence, and Additivity</i> Cory Juhl, University of Texas at Austin and Kevin T. Kelly, Carnegie-Mellon University	181
19.	<i>Austere Realism and the Worldly Assumptions of Inferential Statistics</i> J.D. Trout, Loyola University of Chicago	190
20.	<i>Retrieving the Point of the Realism-Instrumentalism Debate: Mach vs. Planck on Science Education Policy</i> Steve Fuller, University of Durham	200
<b>Part VI. Quantum Mechanics and Cosmology</b>		
21.	<i>On the Paradoxical Aspects of New Quantum Experiments</i> Lev Vaidman, Tel-Aviv University	211
22.	<i>The Bohmian Model of Quantum Cosmology</i> Craig Callender and Robert Weingard, Rutgers University	218
23.	<i>Should We Believe in the Big Bang?: A Critique of the Integrity of Modern Cosmology</i> Graeme Rhook and Mark Zangari, La Trobe University	228
<b>Part VII. Statistics and Experimental Reasoning</b>		
24.	<i>On the Nature of Bayesian Convergence</i> James Hawthorne, University of Oklahoma	241

25.	<i>The Extent of Dilation of Sets of Probabilities and the Asymptotics of Robust Bayesian Inference</i> Timothy Herron, Teddy Seidenfeld, and Larry Wasserman, Carnegie-Mellon University	250
26.	<i>In Search of a Pointless Decision Principle</i> Prasanta S. Bandyopadhyay, University of Rochester	260
27.	<i>The New Experimentalism, Topical Hypotheses, and Learning from Error</i> Deborah G. Mayo, Virginia Polytechnic Institute and State University	270
28.	<i>Of Nulls and Norms</i> Peter Godfrey-Smith, Stanford University	280
<b>Part VIII.</b>	<b>Historical Case Studies and Methodology</b>	
29.	<i>Experiment, Speculation and Law: Faraday's Analysis of Arago's Wheel</i> Friedrich Steinle, Georg-August-Universität, Göttingen	293
30.	<i>Scientists' Responses to Anomalous Data: Evidence from Psychology, History, and Philosophy of Science</i> William F. Brewer and Clark A. Chinn, University of Illinois at Urbana-Champaign	304
31.	<i>Methodology, Epistemology and Conventions: Popper's Bad Start</i> John Preston, University of Reading	314
32.	<i>Sherlock Holmes, Galileo, and the Missing History of Science</i> Neil Thomason, University of Melbourne	323
33.	<i>How to Remain (Reasonably) Optimistic: Scientific Realism and the "Luminiferous Ether"</i> John Worrall, The London School of Economics	334
<b>Part IX.</b>	<b>Quantum Mechanics: Decoherence and Related Matters</b>	
34.	<i>Making Sense of Approximate Decoherence</i> Guido Bacciagaluppi and Meir Hemmo, University of Cambridge	345
35.	<i>The 'Decoherence' Approach to the Measurement Problem in Quantum Mechanics</i> Andrew Elby, University of California at Berkeley	355
36.	<i>Wavefunction Tails in the Modal Interpretation</i> Michael Dickson, University of Notre Dame	366

**Part X. Games, Explanations, Authority, and Justification**

37. *The Microeconomic Interpretation of Games* 379  
Chantale LaCasse and Don Ross, University of Ottawa
38. *Ceteris Paribus Laws and Psychological Explanations* 388  
Charles Wallis, University of Rochester
39. *The Epistemic Authority of Expertise* 398  
Robert Pierson, York University
40. *Circular Justifications* 406  
Harold I. Brown, Northern Illinois University

**Part XI. Philosophy of Psychology and Perception**

41. *Is Cognitive Neuropsychology Possible?* 417  
Jeffrey Bub, University of Maryland
42. *The Scope of Psychology* 428  
Keith Butler, Washington University
43. *Perception and Proper Explanatory Width* 437  
Mark Rollins, Washington University
44. *Is Seeing Believing?* 446  
David Hilbert, California Institute of Technology
45. *Simplicity, Cognition and Adaptation: Some Remarks on Marr's Theory of Vision* 454  
Daniel Gilman, The Pennsylvania State University
