<i>List of figures</i>	<i>page</i>	<i>vii</i>
<i>List of tables</i>		<i>ix</i>
<i>Preface</i>		<i>xi</i>
1 How safe is safe enough?		1
Definition of the acceptable-risk problem		1
Acceptable risk as a decision problem		2
Overview		7
Summary		7
2 Why is it so hard to resolve acceptable-risk problems?		9
Five generic complexities		9
Uncertainty about problem definition		9
Difficulties in assessing the facts		15
Difficulties in assessing values		22
Uncertainties about the human element		27
Difficulties in assessing decision quality		35
Track record		40
Can facts and values be separated?		43
Summary		46
3 Choosing an approach to acceptable risk: a metadecision problem		47
Types of approaches		48
Seven criteria for evaluating the acceptability of approaches to acceptable risk		53
Summary		59
4 Professional judgment		61
How do professionals determine acceptable risk?		61
Generic problems		63
How adequate is professional judgment for resolving acceptable-risk questions?		75
Summary		78
5 Bootstrapping		79
Methods of bootstrapping		79
Generic problems		88
How adequate are bootstrapping methods for resolving acceptable-risk questions?		96
Summary		100
6 Formal analysis		101
Cost-benefit analysis		102
Decision analysis		104

Variants of cost-benefit analysis	104
Decision analysis	106
Generic problems	108
How adequate are analytic techniques for resolving acceptable-risk problems?	115
Summary	119
7 Comparison of approaches	120
Global ratings	120
Choosing an approach	129
Summary	133
8 What have we learned?	134
General conclusions about acceptable-risk decisions	134
Summary	139
9 Recommendations for improving acceptable-risk decision making	141
Recommendations for the technical community	141
Recommendations for public involvement	148
Recommendations for the marketplace	150
Recommendations for government	153
Summary	156
10 What do we need to learn?	157
Research to reduce uncertainty about problem definition	157
Research to reduce uncertainty about the facts	159
Research to reduce uncertainty about values	162
Research to reduce uncertainty about the human element	164
Research to reduce uncertainty about decision quality	166
An experimenting academe	169
An experimenting society	170
Summary	171
<i>References</i>	172
<i>Additional readings</i>	182
<i>Index</i>	183
