<i>Introduction: The Task of a Logic of Science</i>	i
1 Theory and Observation	
Is there an independent observation language?	9
Entrenchment	17
The network model	24
Theoretical predicates	28
Theories	33
Conclusion	43
2 A Network Model of Universals	
The problem of universals	45
The correspondence postulate	48
Coherence conditions	51
Some epistemological consequences	54
Meaning change	61
Goodman's strictures on similarity	66
Absolute universals again	70
3 The Grue Paradox	
Principles of solution	75
Objective tests of 'grue'	80
Meaning variance and entrenchment	85
4 The Logic of Induction as Explication	
Hume's legacy	89
A more modest programme	96
Probabilistic confirmation	99
5 Personalist Probability	
Axioms and interpretation	103
Bayesian methods	108
Convergence of opinion	115
Non-Bayesian transformations	119
Uncertain evidence	125
6 Bayesian Confirmation Theory	
The positive relevance criterion	133
The transitivity paradox	141
Suggested resolutions	147

7	Universal Generalizations	
	Exchangeability and clustering	151
	The raven paradoxes	155
	Clustering in Carnap's confirmation theory	163
	Extension to analogical argument	167
	Causal laws and eliminative induction	170
8	Finiteness, Laws and Causality	
	The distribution of initial probabilities	175
	The probability of laws	181
	The necessity of laws	189
9	Theory as Analogy	
	Some false moves: 'acceptance' and 'explanation'	197
	Deduction from phenomena	201
	Whewell's consilience of inductions	205
	The analogical character of theories	208
	The function of models	213
	Identification of theoretical predicates	217
10	Simplicity	
	Subjective and notational simplicity	223
	Content	225
	Economy and clustering	229
	The principle of relativity and classical electrodynamics	239
	Einstein's logic of theory structure	249
	Summary	255
11	Maxwell's Logic of Analogy	
	Hypothetical, mathematical and analogical methods	259
	Experimental identifications	264
	The electrodynamic theory	269
	Meaning variance and experimental identifications	279
12	A Realist Interpretation of Science	
	The aims of science	283
	From naïve realism to pluralism	285
	Realism and relativity	290
	The cumulative character of science	295
	<i>Index of Names</i>	303
	<i>Index of Subjects</i>	306
