Introduction xvii

## **Part One**

### **ON THE THEORY OF SYSTEMS**

#### I. CONSTRUCTIONAL DEFINITION

1. Extensional Identity	3
2. Substitution Criteria	9
3. Extensional Isomorphism	13
4. Consequences of Isomorphism as a Criterion	22
5. On Systems of Predicates of Individuals	29

#### II. THE GENERAL APPARATUS

1. General Apparatus and Special Basis	33
2. The Question of Classes	34
3. Nominalism	37
4. The Calculus of Individuals	46
5. The Calculus in Systems	56

## III. EXTRALOGICAL BASES

1. The Nature of Primitive Terms	63
2. The Choice of Basis	64
3. Simplicity	66
4. Reflexivity and Complexity	75
5. Transitivity, Self-completeness, and Complexity	83
6. Symmetry and Complexity	88
7. Final Formulae for Primary Complexity	94
8. Secondary Complexity	104
9. Evaluation of Bases	105
10. Complexity of Other Primitives	107
11. Basic Individuals	117
12. Postulates	118

**Part Two****ON QUALITIES AND THE CONCRETE**

## IV. APPROACH TO THE PROBLEMS

1. Things	127
2. Properties	130
3. Qualia	132
4. Physicalistic and Phenomenalistic Systems	136
5. Realistic and Particularistic Systems	142
6. Introduction to the Problems of Abstraction and Concretion	145

V. THE SYSTEM OF THE *AUFBAU*

1. Introduction	151
2. The Basic Units	154
3. Methods of Construction	156
4. The Choice of a Primitive	169
5. Definition of Qualities	173
6. Further Constructions	178
7. Conclusion	187

## VI. FOUNDATIONS OF A REALISTIC SYSTEM

1. Qualia as Atoms	189
2. Atoms of the System	194
3. Togetherness	200
4. The Problem of Concretion	204
5. A Revision and its Consequences	208
6. Rectification of Particularism	211
7. Alternative Treatments of the Problem of Concretion	214

## VII. CONCRETA AND QUALIFICATION

1. The Individuals of the System	219
2. Principles of Togetherness	224
3. Complexes	227
4. Concreta	230
5. Elementary Qualification	232
6. Compound Qualification	237
7. A Paradox and its Lesson	244
8. A Note on Abstract, Concrete, Universal, and Particular Individuals	248

## VIII. SIZE AND SHAPE

1. The Problem	251
2. Size	253
3. Shape	257
4. Initial and Derivative Quality Terms	260

**Part Three****ON ORDER, MEASURE, AND TIME**

## IX. THE PROBLEM OF ORDER

1. A New Problem	267
2. Choice of a Basic Predicate	269
3. Mapping and the Mapped	277
4. Reduction of Basis	282
5. Categories and Realms	285
6. Principles of Matching	289
7. A Rule of Order	293

## X. TOPOLOGY OF QUALITY

1. The Formal Problem	297
2. Betwixtness	298
3. Justification of the Definition of Betwixtness	304
4. Besideness	309
5. Just Noticeable Difference	311
6. Adjusted Linear Maps	313
7. Some Cartographical Conventions	317
8. Some Types of Nonlinear Array	320

CONTENTS

xv

9. Besideness in Square-Cell Networks	321
10. Nextness	326
11. Spurious Maps	330
12. Toward Shape and Measure	333
13. Ordinal Quasianalysis	335
14. Recent Developments	340

XI. OF TIME AND ETERNITY

1. Phenomenal Time	355
2. Time and Language	359
3. The Passage of Time	371
4. The Temporal Field	374
5. The Physical World	378

Index	381
