

CONTENTS

Preface	xiii
1. Behavior Settings as a Basis for Social System Accounts	1
1.1 Social system accounting: two problems and a proposed solution	2
1.2 The plan of the book	4
2. The Usefulness of Behavior Settings for Classifying and Describing Human Activities in a Community	11
2.1 The discovery of behavior settings	12
2.2 Behavior settings and the meaning of comprehensiveness in social system accounts	13
2.3 Behavior settings and the meaning of improvements in a self-contained community	14
2.4 Describing a hypothetical community in terms of behavior settings: preliminary conceptualization	15
2.5 Describing an actual community in terms of behavior settings, I: authority systems, occupancy times, and inhabitant-setting intersections	19
2.6 The importance of schools, churches, and voluntary associations in providing opportunities for leadership, service, and social participation	21
2.7 Town and trade area as a community: implications of relative completeness and closure for social system accounts	22
2.8 Describing an actual community in terms of behavior settings, II: genotypes, programs, action patterns, and behavior mechanisms	24

2.9	The significance of time-allocations among behavior settings and some comments on Barker's terminology	29
3.	Behavior Settings and Objective Social Indicators	34
3.1	The OECD List of Social Indicators	36
3.2	A framework for discussing the relationship of individual well-being to behavior settings, stocks of physical capital, and objective social indicators	38
3.3	The relevance of stocks of physical capital to behavior settings and individual well-being	39
3.4	The Bureau of Economic Analysis (BEA) estimates of stocks of physical capital and consumer durable goods in the United States, 1929-1979	40
3.5	OECD indicators relating aspects of the physical environment to individual well-being	41
3.6	Standard disaggregations of the OECD indicators as attributes of individuals and attributes of the environment	42
3.7	Comments on the remaining OECD indicators	42
3.8	Concluding remarks	46
4.	The Classification of Behavior Settings in Social System Accounts	48
4.1	Interrelations between behavior setting genotypes and some other principles of classification	49
4.2	Should behavior settings be classified according to their profiles of ratings on action patterns and behavior mechanisms?	52
4.3	Should behavior settings be classified according to the age groups for which they are designed, the extent to which their performers are paid professionals, and/or the degree to which their amateur performers approach professional standards?	54

CONTENTS

ix

4.4	Barker's criteria for deciding whether or not two behavior settings belong to the same genotype	59
4.5	Barker's criteria for deciding whether or not two entities are components of a single behavior setting	62
4.6	Relationships between Barker's categories and the Standard Industrial Classification	64
4.7	Some examples of SIC establishments picked up in Barker's survey of Midwest and in economic censuses for the Des Moines SMSA	65
4.8	Further observations on behavior settings and the Standard Industrial Classification	68
5.	The Classification of Roles in Social System Accounts	72
5.1	Roles in behavior settings and jobs in the Dictionary of Occupational Titles: relationships cited by Barker and his associates	74
5.2	Classifying occupations	76
5.3	Classifying unpaid roles	79
5.4	Behavior mechanisms in relation to role complexity and heaviness of work	82
5.5	Relations between DOT ratings of worker functions, DOT ratings of worker traits, and Census data on occupations and earnings	84
5.6	Roles and worker functions as attributes of the environment; worker traits as attributes of individuals	88
6.	The Classification of Stocks of Physical Capital and Consumer Durables in Social System Accounts	90
6.1	Physical capital and OECD social indicators	90
6.2	The three OECD indicators of housing conditions: their relevance to the homes of Midwest	90
6.3	The OECD indicator of access to selected services: its relevance to the stores,	

	schools, and service establishments of Midwest	91
6.4	The further implications of 'access' and of basic amenities: streets, sidewalks, water supply and sewage disposal systems, telephones and electric power	93
6.5	The OECD indicators of exposure to outdoor air pollutants and noise: their relevance to behavior settings and to defensive investments for pollution and noise control	94
6.6	Six OECD indicators and the residentiary environment of Midwest town	95
6.7	The OECD indicator of work environment nuisances	95
6.8	The OECD indicator of travel time to work	96
6.9	The larger community of Midwest: combined indicators and stocks of physical capital for town and trade area residents	96
6.10	The export base of the larger community of Midwest	98
6.11	Microcosm, U.S.A.: stocks of physical capital and consumer durables, 1929, 1954, and 1979	98
7.	The Classification and Delineation of Communities and Regions in Social System Accounts	109
7.1	The classification of retail and wholesale trade centers	112
7.2	Classification of trade centers in the Des Moines BEA Economic Area	117
7.3	Trade center categories and the OECD social indicator of proximity to selected services	127
7.4	Social accounting matrices for successively larger communities and urban-centered regions	128
8.	A Behavior Setting Approach to Microanalytical Simulation Models at the Community Level*	132
8.1	Modeling the Barker community of Midwest	133

*By James R. Prescott, Professor of Economics, Iowa State University.

CONTENTS

xi

8.1.1	Modeling strategies	133
8.1.2	Data sources	136
8.2	Structural and causal hypotheses	137
8.2.1	Theory of manning	137
8.2.2	Behavior setting operation	138
8.2.3	Prototype settings	141
8.2.4	Causal relationships	143
8.3	Concluding comments	149
9.	Some Broader Implications of Behavior Settings for the Social Sciences	150
9.1	Distinctive features of the behavior setting concept	150
9.2	Some relationships of behavior settings and eco-behavioral science to established disciplines	152
9.3	Barker on the need for an eco-behavioral science, 1969	155
9.4	Barker's mature view of an eco-behavioral science, 1977	156
9.5	The relation between objective and subject- ive social indicators: Barker's behavior settings and Lewin's life space?	158
9.6	Potential uses of behavior setting concepts by social and economic historians	159
9.7	Potential uses of behavior setting concepts in social and economic develop- ment planning	160
9.8	Potential uses of behavior setting concepts in reconstructing and reinter- preting earlier community surveys	161
9.9	Uses of behavior setting concepts in vari- ous fields of mathematical social science	161
10.	Social System Accounts Based on Behavior Settings: Some Next Steps	165
10.1	What would a system of social accounts based on behavior settings include?	166
10.2	Listing and classifying the outputs of a social system	168
10.3	Input-output relationships and social policies	168

10.4	Pseudo-prices, exchange rates, or 'barter terms of trade' between pairs of social system outputs	169
10.5	Possibilities for experimentation with social system accounts and models based on behavior settings by international agencies, by local governments, and by market and nonmarket organizations	170
10.6	Roger Barker's contribution to social science: an appraisal and a dedication	173
