	PAGE
Preface	vii
Introduction	xi
 PART I. TRUTH FUNCTIONS	
1. Negation, Conjunction, and Alternation	1
2. Truth Functions	7
3. The Conditional	12
4. Grouping	17
5. Truth-value Analysis	22
6. Consistency and Validity	28
7. Implication	33
8. Words into Symbols	39
9. Equivalence	46
10. Normal Schemata	52
11. Duality	59
 PART II. UNIFORM QUANTIFICATION	
12. Categorical Statements	64
13. Venn's Diagrams	69
14. Syllogisms	73
15. Limits of these Methods	79
16. Quantification	83
17. Uniform Quantificational Schemata	89
18. Validity	94
19. Equivalence. Canonical Schemata	101
20. Testing for Consistency	107
21. Testing for Implication	113

CONTENTS

PART III. GENERAL THEORY OF QUANTIFICATION

22. Quantification Extended	119
23. Quantificational Schemata and Predicates	127
24. Validity of Quantificational Schemata	135
25. Substitution in Quantificational Schemata	140
26. Laws of Implication	147
27. Deduction	153
28. Completion of the Method	159
29. Deductive Technique	167
30. Polyadic Problems. Conversion of Quantifiers	175
31. Application	182
32. Nature of Quantification Theory	189

PART IV. GLIMPSES BEYOND

33. Existence and Singular Inference	196
34. Singular Terms versus General Terms	203
35. Identity	208
36. Descriptions	215
37. Elimination of Singular Terms	220
38. Classes	225
39. Number	231
40. Relations	237
41. Class Theory, Mathematics, and the Theory of Proof	242
42. Variant Theories of Classes	248

APPENDIX. <i>Completeness of Quantification Theory. Löwenheim's Theorem</i>	253
