	Introduction	1
1	Molecular, organismic and population ecology	11
	Looking in from the outside	12
	Molecular ecology	17
	Organismic ecology	22
	Population ecology	27
	The web of life and the 'balance of nature'	33
	Conclusions	42
2	Evolution	44
	Chance and mutation	45
	Natural selection	50
	Enter purpose	56
	Human evolution	59
	Conclusions	64
3	Models of the living	66
	The function of models	67
	The mechanistic model	68
	The vitalistic model	75
	The emergent evolution model	77
	Toward an ecological model	79
	From substance thinking to event thinking	84
	Life without boundaries	91
	Conclusions	94
4	The human and the natural	97
	The ecological model of human existence	98
	The human condition in dispute	110
	The fall upward	117
	Do animals experience?	122
	The evolution of experience	134
	Conclusions	138

5 An ethic of life 141
Why an ethic? 142
Ethics beyond anthropocentrism 146
Animal rights 153
Human rights 162
Biosphere ethics 168
Conclusions 175

6 Faith in life 176
Created goods and creative good 178
A man of faith 180
Trusting Life 183
Life as cosmic power 188
Life and evil 193
Life as God 195
Conclusions 200

7 The biological manipulation of human life 203
The life ethic 204
Justice in the use of scarce medical resources 208
The manipulation of human experience 213
Negative eugenics, positive eugenics and cloning 219
Genetic engineering 225
Conclusions 231

8 A just and sustainable world 234
Justice 235
Sustainability 239
The unsustainable and unjust world 245
The ideology of unlimited growth 253
Conclusions 262

9 Economic development in ecological perspective 265
The dominant model 267
The ecological model 273
Socialist and market economies 285
Conclusions 294

10 Rural and urban development in ecological perspective 296
A just and sustainable agriculture 298
A just and sustainable role for women 309
Just and sustainable energy 318
Just and sustainable transportation and urban habitat 323
Conclusions 329
