

# Contents

Preface	xii
1. Biology and Culture in Human Evolution	1
Evolution before Darwin	2
Man's Animal Ancestry	4
The Evolution of Culture	7
Social Darwinism and Racism	10
Equality or Identity	13
Ectogenetic, Autogenetic, and Biological Theories of Evolution	15
Organic and Superorganic	18
Human Evolution as a Unified Process	22
2. Heredity	23
Heredity and Inheritance	23
Preformism and Epigenesis	24
Mendel and the Gene Theory	27
The Rules of Inheritance	28
The Genetic Basis of Individuality	29
Genes and Unit Characters	32
Genes and Chromosomes	34
The Genetic Code	35
Gene Action	38
Genotype and Phenotype	40
Which Characteristics Are Hereditary and Which Environmental?	42
Hereditary and Environmental Differences	44
Heredity and Mutation	46
Frequency of Mutations	47
3. Environmentalist Thesis and Hereditarian Antithesis	51
Nature and Nurture	52
Characters, Traits, and Differences	55
Specific and Ordinal Traits	56
Human Culture and Socialization	57

Disruption of the Socialization Process	59
Development and Maturation	60
Imprinting	62
Psychoanalysis	63
Drives, Symbols, and Birth Traumas	65
Oedipus Complex and Hypothesis of Psychic Unity of Mankind	66
Mediating Variables	68
Language as a Molder of Thought	71
Culturology	73
4. Equal but Dissimilar	76
Family Resemblances	77
Correlations	79
Heredity and Environment, Operational Approach in Nonhuman Material	81
Identical and Fraternal Twins	82
The Physique of Twins	83
Intelligence in Twins	85
Man as a Part of His Own Environment	88
Intelligence of Foster Children and Parents	90
Primary Mental Abilities and Personality Traits	91
Somatotypes and Body Types	93
Nature and Nurture in Condominium	96
5. Heredity of Health and Disease	100
Simple and Complex Traits	100
Skin Color	102
Polygenes	104
Hereditary Diseases and Malformations	107
Achondroplastic or Chondrodystrophic Dwarfs	114
Diabetes Mellitus	115
Muscular Dystrophy	117
Mental Diseases	119
Homosexuality	122
Longevity	124
The Adaptive Norm	126
6. Natural Selection and Survival of the Fit	128
Some Necessary Semantics	129
Natural Selection, Darwinian and Pre-Darwinian	130
Natural Selection, Post-Darwinian	132

From Kropotkin to Johannsen	133
From Jenkin to Chetverikov	135
Mutation and Fitness	136
Useful Mutation—a Needle in a Haystack	138
Gene Frequency	140
Elementary Evolutionary Events	141
Selection against Dominant Detrimental Mutation	143
Selection against Recessive Detrimental Mutation	144
The Genetic Load in <i>Drosophila</i>	146
The Genetic Load in Man	148
Hybrid Vigor and Balanced Polymorphism	150
Directional Selection	154
Are Culture and Natural Selection Compatible?	159
7. The Emergence of Man	162
Evidence of Human Evolution	163
Living Primates	168
Irreversibility of Evolution	169
Fossil Nonhuman Primates	171
The Man-Apes, Australopithecinae	174
<i>Homo erectus</i> and His Relatives	176
The Pre-Sapiens and the Pre-Neanderthals	178
The Neanderthal Race	179
Where Did <i>Homo sapiens</i> Come from?	180
What Is a Species?	183
Reproductive Isolation	184
Races and Species of Fossil Man	186
Monophyletic or Polyphyletic Origins	188
8. Human Mental Faculties and their Antecedents	192
Upright Stance and Tool Use	192
Man's Similarity to Simian Fetus	195
Family Integration	197
Brain Size	199
Brain Differentiation	201
Instinct	203
Learning	205
Insight and Generalization	207
Symbol and Language	208
Learned Tradition on the Subhuman Level	211
Play	213
Art and Aesthetics	214

9. Polymorphism, Class, and Caste	219
Cladogenesis and Anagenesis	220
Polytypism and Polymorphism	221
Chromosomal Polymorphism in <i>Drosophila</i>	224
Chromosomal Races in <i>Drosophila</i>	227
Races, Classes, and Castes as Mendelian Populations	228
Blood Groups	231
Microgeographic Races in Wales	232
Indian Castes	234
Social Mobility in China	238
The Jews	240
Social Class and Equality of Opportunity	242
Social Class and Natural Selection	245
Diversifying Selection	248
Selection for Educability	250
10. Race	253
Vicissitudes of the Race Concept	254
Racial Typologies	256
Distribution of Blood Group Genes in Human Populations	257
Boyd's Classification of Human Races	261
Coon-Garn-Birdsell Race Classification	262
Races, Subspecies, Varieties, Breeds, and Ethnic Groups	266
Races as Products of Natural Selection	269
Skin Color	271
Body Build and Climatic Adaptation	273
Physiological Adaptation	276
Other Forms of Selection	278
Genetic Drift and Selection of Gene Systems	279
Levels of Technology and Gene Frequencies	284
Race Equality vs. Sameness	285
11. Evolution in Process	287
Normalizing, Diversifying, Balancing, and Directional Selection	287
Genetic Load and Genetic Elimination	290
Genetic Radiation Damage	291
The Threat of the Biological Twilight of Mankind	293
Classical and Balance Theories of Population Structure	295
Selection and Population Growth	299
The Population Explosion	300
Selection of and by Infection	302

<b>CONTENTS</b>	<b>ix</b>
Ebb and Flow of Resistance to Diseases	303
Increasing Severity of Natural Selection	306
Intelligence, Social Position, and Fertility	312
Are People Becoming Less Intelligent?	315
12. The Road Traversed and the Road Ahead	319
Is the Biological Evolution of Man Completed?	320
The Feedback between Genes and Culture	322
Of Rats and Men	325
Muller's Bravest New World	327
Social Costs of Variant Genes	330
Social Contribution and Social Cost	333
Biological Flaws in Man's Nature	335
Self-Awareness and the Fall of Man	337
Evolution and Ethics	340
Evolution, Values, and Wisdom	342
Man, the Center of the Universe	345
<b>Bibliography</b>	<b>349</b>
<b>Index</b>	<b>371</b>
