

# **PROOF THEORY**

**SECOND EDITION**

**Gaisi Takeuti**

Professor Emeritus of Mathematics  
The University of Illinois at Urbana-Champaign

**Dover Publications, Inc.**

**Mineola, New York**

## CONTENTS

Preface . . . . .	v
Preface to the second edition . . . . .	vii
Contents . . . . .	ix
Introduction . . . . .	1
<b>PART I. FIRST ORDER SYSTEMS . . . . .</b>	<b>3</b>
<b>CHAPTER 1. FIRST ORDER PREDICATE CALCULUS . . . . .</b>	<b>5</b>
§1. Formalization of statements . . . . .	5
§2. Formal proofs and related concepts . . . . .	9
§3. A formulation of intuitionistic predicate calculus . . . . .	18
§4. Axiom systems . . . . .	20
§5. The cut-elimination theorem . . . . .	21
§6. Some consequences of the cut-elimination theorem . . . . .	28
§7. The predicate calculus with equality . . . . .	37
§8. The completeness theorem . . . . .	40
<b>CHAPTER 2. PEANO ARITHMETIC . . . . .</b>	<b>75</b>
§9. A formulation of Peano arithmetic . . . . .	75
§10. The incompleteness theorem . . . . .	79
§11. A discussion of ordinals from a finitist standpoint . . . . .	86
§12. A consistency proof of <b>PA</b> . . . . .	101
§13. Provable well-orderings . . . . .	147
§14. An additional topic . . . . .	156
<b>PART II. SECOND ORDER AND FINITE ORDER SYSTEMS . . . . .</b>	<b>159</b>
<b>CHAPTER 3. SECOND ORDER SYSTEMS AND SIMPLE TYPE THEORY . . . . .</b>	<b>165</b>
§15. Second order predicate calculus . . . . .	165
§16. Some systems of second order predicate calculus . . . . .	172
§17. The theory of relativization . . . . .	177
§18. Truth definition for first order arithmetic . . . . .	183
§19. The interpretation of a system of second order arithmetic . . . . .	188
§20. Simple type theory . . . . .	192
§21. The cut-elimination theorem for simple type theory . . . . .	197
<b>CHAPTER 4. INFINITARY LOGIC . . . . .</b>	<b>208</b>
§22. Infinitary logic with homogeneous quantifiers . . . . .	211

§23. Determinate logic . . . . .	236
§24. A general theory of heterogeneous quantifiers . . . . .	264
<b>PART III. CONSISTENCY PROBLEMS . . . . .</b>	<b>295</b>
<b>CHAPTER 5. CONSISTENCY PROOFS . . . . .</b>	<b>298</b>
§25. Introduction . . . . .	298
§26. Ordinal diagrams . . . . .	303
§27. A consistency proof of second order arithmetic with the $\Pi_1^1$ -comprehension axiom . . . . .	320
§28. A consistency proof for a system with inductive definitions . . . . .	350
<b>CHAPTER 6. SOME APPLICATIONS OF CONSISTENCY PROOFS . . . . .</b>	<b>361</b>
§29. Provable well-orderings . . . . .	361
§30. The $\Pi_1^1$ -comprehension axiom and the $\omega$ -rule . . . . .	363
§31. Reflection principles . . . . .	368
<b>POSTSCRIPT . . . . .</b>	<b>381</b>
<b>APPENDIX . . . . .</b>	<b>393</b>
<b>PROOF THEORY by Georg Kreisel . . . . .</b>	<b>395</b>
<b>CONTRIBUTIONS OF THE SCHÜTTE SCHOOL by Wolfram Pohlers . . . . .</b>	<b>406</b>
<b>SUBSYSTEMS OF <math>Z_2</math> AND REVERSE MATHEMATICS by Stephen G.     Simpson . . . . .</b>	<b>432</b>
<b>PROOF THEORY: A PERSONAL REPORT by Solomon Feferman . . . . .</b>	<b>447</b>
<b>Index . . . . .</b>	<b>487</b>
