Preface	ix
1 Introduction	1
1.1 Preliminaries	2
1.2 Simple type theories	10
1.3 Three types of formalism	22
2 N-systems and H-systems	35
2.1 Natural deduction systems	35
2.2 N_i as a term calculus	45
2.3 The relation between C , I and M	48
2.4 Hilbert systems	51
2.5 Notes	55
3 Gentzen systems	60
3.1 The G_1 - and G_2 -systems	61
3.2 The Cut rule	66
3.3 Equivalence of G - and N -systems	68
3.4 Systems with local rules	75
3.5 Absorbing the structural rules	77
3.6 The one-sided systems for C	85
3.7 Notes	87
4 Cut elimination with applications	92
4.1 Cut elimination	92
4.2 Applications of cutfree systems	105
4.3 A more efficient calculus for I_p	112
4.4 Interpolation and definable functions	116
4.5 Extensions of G_1 -systems	126
4.6 Extensions of G_3 -systems	130
4.7 Logic with equality	134

4.8	The theory of apartness	136
4.9	Notes	139
5	Bounds and permutations	147
5.1	Numerical bounds on cut elimination	148
5.2	Size and cut elimination	157
5.3	Permutation of rules for classical logic	164
5.4	Permutability of rules for G1i	171
5.5	Notes	176
6	Normalization for natural deduction	178
6.1	Conversions and normalization	178
6.2	The structure of normal derivations	184
6.3	Normality in G-systems and N-systems	189
6.4	Extensions with simple rules	197
6.5	E-logic and ordinary logic	199
6.6	Conservativity of predicative classes	203
6.7	Conservativity for Horn clauses	205
6.8	Strong normalization for $\rightarrow\mathbf{Nm}$ and λ_{\rightarrow}	210
6.9	Hyperexponential bounds	215
6.10	A digression: a stronger conversion	217
6.11	Orevkov's result	219
6.12	Notes	223
7	Resolution	230
7.1	Introduction to resolution	230
7.2	Unification	232
7.3	Linear resolution	236
7.4	From Gentzen system to resolution	243
7.5	Resolution for Ip	246
7.6	Notes	255
8	Categorical logic	258
8.1	Deduction graphs	259
8.2	Lambda terms and combinators	264
8.3	Decidability of equality	271
8.4	A coherence theorem for CCC's	274
8.5	Notes	281
9	Modal and linear logic	283
9.1	The modal logic S4	284

9.2	Embedding intuitionistic logic into S4	288
9.3	Linear logic	292
9.4	A system with privileged formulas	300
9.5	Proofnets	303
9.6	Notes	313
10	Proof theory of arithmetic	317
10.1	Ordinals below ε_0	318
10.2	Provability of initial cases of TI	321
10.3	Normalization with the omega rule	325
10.4	Unprovable initial cases of TI	330
10.5	TI for non-standard orderings	337
10.6	Notes	342
11	Second-order logic	345
11.1	Intuitionistic second-order logic	345
11.2	Ip² and λ2	349
11.3	Strong normalization for Ni²	351
11.4	Encoding of λ2Ω into λ2	357
11.5	Provably recursive functions of HA²	358
11.6	Notes	364
	Solutions to selected exercises	367
	Bibliography	379
	Symbols and notations	404
	Index	408
