### Foundations of multisensory perception

#### 1. Bouba-Kiki: cross-domain resonance and the origins of synesthesia, metaphor, and words in the human mind

Vilayanur S. Ramachandran and Zeve Marcus, Chaipat Chunharas

Introduction 3

Synesthesia 5

    Physiology of synesthesia 8

    Creativity 10

    Paradoxes of synesthesia 10

Bouba-Kiki 12

    Bouba-Kiki and word origins 13

    Bouba-Kiki and memory consolidation 15

    Bouba-Kiki and conceptual metaphors 16

    Intersensory metaphors 16

    Directionality of metaphors 17

    Inferior parietal lobule and Bouba-Kiki 17

    Other sequelae of IPL damage 19

    Predictions about dyslexia 21

    Metaphor blindness 21

    Taxonomy of intersensory effects 21

    Esthetic Blending 23

Sex and violence 25

The mirror neuron system 25

    Sensory mirror neuron system 26

    Out-of-body experience 27

Gestures, imitation, synkinesia, and the  
MNS 27

Autism 29

Number lines 30

Calendar lines 32

Neural basis of mental calendars 35

Conclusion 36

References 36

Further reading 40

#### 2. Philosophical insights

Matthew Fulkerson

Starting point: the problem of individuating the  
senses 41

A taxonomy of sensory interactions 45

Multisensory blends 52

Binding and unisensory perception 52

Are all experiences multimodal? 53

References 54

#### 3. Neural development of multisensory integration

Barry E. Stein and Benjamin A. Rowland

Overview 57

The products of multisensory  
integration 58

Multisensory integration in individual SC  
neurons 58

The native state of multisensory integration  
is competitive 59

Developing multisensory integration and the  
principles that govern it 61

How experience leads to the development of  
SC multisensory integration  
capabilities 62

- Incorporating multisensory experience into the circuit 67
- Multisensory experience and influences from cortex: two interrelated developmental events 69
- Multisensory plasticity in adulthood 70
- Clinical implications 72
- Using the principles of multisensory integration to ameliorate hemianopia 73
- Postrehabilitation visual capabilities 80
- Acknowledgments 81
- References 81
4. The development of multisensory processes for perceiving the environment and the self
- David J. Lewkowicz and Andrew J. Bremner
- Infant perception of the audiovisual attributes specifying inanimate and animate objects 90
- Development of audiovisual processing in infancy 91
- Effects of early experience on audiovisual processing 93
- Early experience and audiovisual processing: multisensory perceptual narrowing 94
- Development of selective attention to multisensory inputs 95
- Multisensory processes for perceiving the body, self, and the environment at hand in infancy and childhood 98
- Visual–haptic object perception in infancy 99
- Multisensory body perception in infancy and childhood 101
- Summary 106
- References 107
5. Computational models of multisensory integration
- David Meijer and Uta Noppeney
- Introduction 113
- Combining information from a single sensory channel with prior knowledge 114
- Forced fusion: integrating sensory signals that come from a common source 117
- Causal inference: accounting for observer's uncertainty about the world's causal structure 122
- Conclusions 129
- Acknowledgments 129
- References 129
6. Multisensory contributions to object recognition and memory across the life span
- Pawel J. Matusz, Mark T. Wallace, and Micah M. Murray
- Introduction 135
- Multisensory contributions to object recognition 136
- Multisensory learning as the norm rather than an exception 138
- From multisensory learning to unisensory object memory 141
- When is multisensory memory better than memory based on unisensory experiences? 141
- What do multisensory benefits for memory depend on and how/why do they vary across individuals? 142
- What are the cognitive and brain mechanisms governing multisensory benefits in memory? 143
- Broader implications: multisensory processes scaffold cognition across the life span 146
- Theoretical implications of the interplay between multisensory processes and memory functions 147
- Outlook: the importance of multisensory processes in public health 147
- Conclusion 148
- Acknowledgments 149
- References 149

---

## II

### Multisensory interactions

#### 7. Visuo-haptic object perception

Simon Lacey and K. Sathian

- Introduction 157
- Haptic and visuo-haptic object recognition 158
  - Behavioral studies 158
- The neural basis of visuo-haptic object processing 160
  - Segregated ventral “what” and dorsal “where” pathways 160
- Multisensory processing of object shape 160
- Object categorization 162
  - Behavioral studies 162
- Neural correlates of visuo-haptic object categorization 163
- View-dependence 164
  - Behavioral studies 164
- View-(in)dependent cortical regions 167
- Individual differences in visuo-haptic representations 167
  - Neural differences between object and spatial imagers 169
- A model of visuo-haptic multisensory object representation 170
- Conclusion 172
- Acknowledgments 172
- References 172

#### 8. Multisensory processes in body ownership

Henrik H. Ehrsson

- Introduction 179
- Perceptual rules of body ownership 181
  - Temporal rule 182
  - Spatial rule(s) 183
  - Tactile congruence rule 184
  - Humanoid shape rule 185

- Multisensory congruency matters, not the particular modality 185
- Multisensory integration of body signals in the cortex: nonhuman primates 186
- Multisensory integration of body signals in the cortex: human neuroimaging 187
- Neuroimaging studies of limb ownership 188
- Full-body ownership 190
- Self-identification, mirrors, and the third-person visual perspective 193
- Summary 194
- Acknowledgments 194
- References 194

#### 9. Visual—vestibular interactions

Aasef G. Shaikh, David S. Zee, Jeffrey Taube, and Amir Kheradmand

- Visual—vestibular interaction in directional heading 202
  - The visual signal as a source of heading perception 202
  - The vestibular signal as a source of heading perception 202
- Visual—vestibular interaction in heading perception and its neural correlates 203
- Visual—vestibular interaction in tilt perception 204
  - The visual signal for tilt perception 205
  - The vestibular signal for tilt perception 206
- Visual—vestibular interaction and its neural correlates 206
  - How is multisensory convergence affected in neurological conditions? 208
  - Impaired tilt perception in vestibular and proprioceptive loss 208
  - Impaired spatial orientation in stroke 208
- Future perspective—translating the concepts of visuo—vestibular integration in clinical neuroscience 210
- Summary 213
- References 213
- Further reading 219

## 10. Multisensory flavor perception: A cognitive neuroscience perspective

Charles Spence

- Introduction 221
- Food and the brain 222
- Multisensory flavor perception: gustatory and olfactory inputs 225
- Oral–somatosensory contributions to multisensory flavor perception 227
- Visual contributions to multisensory flavor perception 228
- Auditory contributions to multisensory flavor perception 230
- Conclusions 231
- References 231

## 11. Audiovisual crossmodal correspondences: behavioral consequences and neural underpinnings

Charles Spence and K. Sathian

- Introduction 239
- Kinds of audiovisual crossmodal correspondence and their effects on behavior 240
- Assessing the impact of crossmodal correspondences on other aspects of cognition 242
- Do crossmodal correspondences occur early or late in human information processing? 243
- Elevation as a fundamental organizational dimension for many crossmodal correspondences 245
- On the relative versus absolute nature of crossmodal correspondences 246
- Sound symbolism and crossmodal correspondences 247
- Crossmodal correspondences and synesthesia 250
- Conclusions 252
- References 253

## 12. How do crossmodal correspondences and multisensory processes relate to synesthesia?

David Brang and Vilayanur S. Ramachandran

- Introduction 259
- Crossmodal correspondences 262

Phenomenological similarities between synesthesia and crossmodal correspondences: grapheme-color, sound-color, and number-form synesthesias 264

Phenomenological similarities between synesthesia and crossmodal correspondences: sequence-space synesthesias and synesthetic mental calendars 266

Phenomenological similarities between synesthesia and crossmodal correspondences: less well-studied varieties of synesthesia 270

How do these models account for other cognitive and perceptual differences present in synesthetes? 271

Relationships between crossmodal correspondences and synesthesia still requiring clarification 272

Conclusions 275

References 276

## 13. Synesthesia: the current state of the field

Jamie Ward and Julia Simner

- Definition and diagnosis 284
- The neural basis of synesthesia 287
- Neurodevelopmental accounts of synesthesia 287
- Evidence of functional and structural brain differences in adults 288
- What is the nature of the connectivity (e.g., functional vs. structural)? 288
- Where in the adult brain are the inducer and concurrent connected together? 289
- Are there atypical features of the synesthete's brain more widely? 290
- Where do synesthetic associations come from? 291
- The cognitive profile of synesthesia 293
- Perception 293
- Imagery 294
- Memory 295
- Art, personality, and creativity 295

Cognitive weaknesses	296
Future directions	296
References	297

#### 14. How synesthesia may lead to enhanced memory

Radhika S. Gosavi and Edward M. Hubbard

Introduction	301
Synesthesia and long-term memory	302
Beyond long-term memory	303
Testing earlier stages of memory in synesthesia	304
Load manipulations	309
The dual coding model	310
The recoding model of memory	311
Conclusions	313
References	314

### Clinical applications

#### 15. Task-selectivity in the sensory deprived brain and sensory substitution approaches for clinical practice: evidence from blindness

Benedetta Heimler and Amir Amedi

Introduction	321
Sensory substitution devices	323
Crossmodal plasticity in cases of sensory deprivation	325
Task-selective sensory-independent organization in the deprived higher-order "visual" cortices	325
Does task-selective and sensory-independent organization extend to higher-order auditory regions as well?	327
Does TSSI organization extend to deprived primary sensory cortices as well?	328
Task-switching versus TSSI organization in higher-order "visual" cortices	329
Beyond the notion of strictly sensory-specific critical periods	331

Specific multisensory training as a tool to maximize sensory restoration outcomes	331
SSD training as a tool to maximize visual recovery after partial visual loss	334
General conclusions	336
References	336

#### 16. Crossmodal neuroplasticity in deafness: evidence from animal models and clinical populations

Stephen G. Lomber, Blake E. Butler, Hannah Glick, and Anu Sharma

Introduction	343
Crossmodal neuroplasticity in animal models of deafness	344
Changes in auditory cortex as a consequence of deafness: structure and neural function	344
Crossmodal reorganization in auditory cortex following deafness: behavior and psychophysics	347
What is the anatomical basis for crossmodal reorganization following deafness?	348
Crossmodal neuroplasticity in clinical populations with deafness and hearing loss	349
Congenital auditory deprivation and neuroplasticity	350
Compensatory crossmodal plasticity in pediatric deafness	351
Clinical implications of compensatory crossmodal plasticity in pediatric hearing loss	354
Using crossmodal reorganization to direct individualized intervention and habilitation for children with hearing loss	354
Crossmodal reorganization as an indicator of efficacy of cochlear implantation	355
Age-related hearing loss and neuroplasticity	356
Compensatory crossmodal plasticity in adult-onset deafness	356

- Compensatory crossmodal plasticity in early-stage, mild-moderate, age-related hearing loss 357
- Clinical implications of crossmodal plasticity in age-related hearing loss 360
- Using crossmodal reorganization to direct individualized rehabilitation for age-related hearing loss 360
- Conclusions 361
- Acknowledgments 362
- References 362
- Further reading 370
- 17. Neurodevelopmental and neuropsychiatric disorders affecting multisensory processes**
- Carissa J. Cascio, David M. Simon, Lauren K. Bryant, Gabriella DiCarlo, and Mark T. Wallace
- Introduction 371
- Autism spectrum disorder 373
- Audiovisual integration in autism spectrum disorder 373
- Differences in integration of simple audiovisual stimuli 373
- Differences in integration of audiovisual speech signals 374
- Disrupted audiovisual temporal processing 376
- Developmental considerations 378
- Summary of audiovisual integration in autism spectrum disorder 379
- Integration of extrapersonal and peripersonal sensory input in ASD 380
- Visual–somatic integration in autism spectrum disorder 380
- Bottom-up influences on visual–somatic integration 381
- Top-down influences on visual-somatic integration 382
- Stimulus considerations 382
- Summary of extrapersonal-peripersonal multisensory processing in ASD 383
- Multisensory integration in animal models of autism spectrum disorder 383
- Schizophrenia 386
- Low-level multisensory integration 386
- Complex stimulus multisensory integration 387
- Multisensory integration relevant for self-perception 390
- Multisensory integration in animal models of schizophrenia 390
- Basic and clinical neuroscience links for multisensory integration 391
- Conclusions 392
- References 392
- 18. Disorders of body representation**
- Laura K. Case, Marco Solcà, Olaf Blanke, and Nathan Faivre
- Introduction 401
- Neurological disorders of body representation 402
- Unilateral disorder of body representation 402
- Personal neglect 402
- Feeling of amputation, hemidepersonalization 403
- Somatoparaphrenia 403
- Phantom limbs and supernumerary phantom limbs 403
- Macro- and microsomatognosia 403
- Global body representation disorder 404
- Autoscopic hallucinations 404
- Heautoscopy 405
- Out-of-body experience 405
- Feeling of presence 406
- Body representation disturbance in chronic pain 407
- Complex regional pain syndrome 407
- Phantom limb pain 408
- Spinal cord injury 409
- Body representation disturbance in psychiatric disorders 409
- Anorexia 410
- Schizophrenia 412

- Gender dysphoria 413  
References 415
- 19 Hemianopia, spatial neglect, and their multisensory rehabilitation  
Nadia Bolognini and Giuseppe Vallar
- Introduction 423  
Multisensory rehabilitation for central visual field defects 423  
Visual field defects: clinical features and anatomy 423  
Multisensory perception in hemianopia 426  
Multisensory rehabilitation of VFDs 429  
  Overview of standard rehabilitation approaches 429  
  Multisensory compensatory training 430  
Unilateral spatial neglect 433  
  Clinical presentation 433  
  Unisensory and multisensory perception in USN 434  
  VISUAL deficits 434  
  Auditory deficits 435  
  Tactile deficits 435  
  Perceptual sensory awareness 437
- The neural bases of the neglect syndrome 438  
Multisensory perception and its potential for neglect rehabilitation 438  
Perspectives for multisensory rehabilitation research 443  
References 443
- 20 Mirror therapy  
Christian Dohle, Eric Altschuler, and Vilayanur S. Ramachandran
- Introduction 449  
Neural mechanisms of mirror visual feedback 450  
Effects of mirror therapy on pain syndromes 451  
Effects of mirror therapy on hemiparesis after stroke 452  
Effects of mirror therapy on other symptoms after stroke 454  
Effects of mirror therapy on pain after stroke 454  
Effects of mirror therapy on other conditions 455  
  How should mirror therapy be performed? 455  
Conclusion 456
