About the Logic Manual vii

Introduction 1

1 Sets, Relations, and Arguments 5
- 1.1 Sets 5
- 1.2 Binary Relations 7
- 1.3 Functions 14
- 1.4 Non-binary Relations 16
- 1.5 Arguments, Validity, and Contradictions 17
- 1.6 Syntax, Semantics, and Pragmatics 24

2 Syntax and Semantics of Propositional Logic 27
- 2.1 Quotation 27
- 2.2 The Syntax of the Language of Propositional Logic 29
- 2.3 Rules for Dropping Brackets 31
- 2.4 The Semantics of Propositional Logic 34

3 Formalization in Propositional Logic 52
- 3.1 Truth-Functionality 53
- 3.2 Logical Form 57
- 3.3 From Logical Form to Formal Language 62
- 3.4 Ambiguity 64
- 3.5 The Standard Connectives 66
- 3.6 Natural Language and Propositional Logic 68

4 The Syntax of Predicate Logic 74
- 4.1 Predicates and Quantification 74
- 4.2 The Sentences of $\mathcal{L}_2$ 82

4.3 Free and Bound Occurrences of Variables 85
4.4 Notational Conventions 87
4.5 Formalization 88

5 The Semantics of Predicate Logic 94
5.1 Structures 95
5.2 Truth 100
5.3 Validity, Logical Truths, and Contradictions 108
5.4 Counterexamples 110

6 Natural Deduction 116
6.1 Propositional Logic 118
6.2 Predicate Logic 130

7 Formalization in Predicate Logic 143
7.1 Adequacy 143
7.2 Ambiguity 147
7.3 Extensionality 152
7.4 Predicate Logic and Arguments in English 157

8 Identity and Definite Descriptions 166
8.1 Qualitative and Numerical Identity 166
8.2 The Syntax of $\mathcal{L}_=$ 167
8.3 The Semantics of $\mathcal{L}_=$ 168
8.4 Proof Rules for Identity 171
8.5 Uses of Identity 174
8.6 Identity as a Logical Constant 183

Appendix: Natural Deduction Rules 186

Bibliography 189
